THE TRIADIC HEART OF SIVA

Kaula Tantricism of Abhinavagupta in the Non-Dual Shaivism of Kashmir

PAUL EDUARDO MULLER-ORTEGA
Kaula Tantricism of Abhinavagupta in the Non-Dual Shaivism of Kashmir

PAUL EDUARDO MULLER-ORTEGA

This book explores one of the most explicit and sophisticated theoretical formulations of tantric yoga. It explains Abhinavagupta's teaching about the nature of ultimate reality, about the methods for experiencing this ultimate reality, and about the nature of the state of realization, a condition of embodied enlightenment. The author uncovers the conceptual matrix surrounding the practices of the Kaula lineage of Kashmir Shaivism.

The primary textual basis for the book is provided by Abhinavagupta's Paratrisika-laghuvrtti, a short meditation manual that centers on the symbolism of the Heart-mantra, SAUH.

"Muller-Ortega's approach is good, clear, intelligent, and perceptive. The translation of the Paratrisika-laghuvrtti given in the appendix, being the first English translation of this short but important text, is a very useful contribution to the study of Kashmir Shaivism, and so are the long and numerous quotations in the text of other works, as yet untranslated into English, of Abhinavagupta." - Andre Padoux, Centre National de la Recherche Scientifique, Paris.

Paul Eduardo Muller-Ortega is Assistant Professor of Religious Studies at Michigan State University.

The cover of this book differs from that of the original printing. In order for the State University of New York Press to maintain its extensive backlist, it has been necessary to use digital printing technology to minimize the cost to reprint small quantities. This has made it possible for our books to remain in print much longer and maintain reasonable pricing. We assure you that the content is identical to the previous printing with the possible exception of minor text corrections.

I wish to express my deep appreciation to Professor Gerald J. Larson, who first introduced me to the study of Abhinavagupta and who patiently guided me during the writing of this book. My deep gratitude also goes to my wife, Virginia, for her constant encouragement as well as her refined editing skills. I owe a special thanks to my parents, Walter and Maria Rosa Muller, whose support during the writing of this book has been wholehearted. I also owe a special acknowledgment to my sister, Susanne R. Muller, who uncomplainingly devoted a summer to typing and retyping portions of the manuscript. I want to publicly express my appreciation for Professor Harvey P. Alper, editor of this series, who encouraged me with valuable guidance and concrete suggestions, and whose untimely death has been a very great and sad loss. I also wish to state my appreciation to the two readers of the manuscript, Dr. Andre Padoux and Professor Edward Dimock, both of whom suggested a number of helpful improvements to the work. I am very grateful to William D. Eastman, Director of State University of New York Press, for his kind and helpful comments, and for his many efforts toward the publication of this book. A work such as this does not see the light of day without the unselfish intervention of a larger number of people than I can here name. I thank them all here with deep appreciation. I must, however, mention a few names: Dr. Pratapaditya Pal and Professor Antonio T. De Nicolas, both of whom helped and encouraged me during the early phases of thinking about this book;
Professors Raghavan and Nandini Iyer who very patiently listened to my ideas on numerous occasions; Professors Ninian Smart, Raimundo Panikkar, William Powell and other members of the Faculty of the Department of Religious Studies, University of California at Santa Barbara; my colleagues in the Department of Religious Studies, Michigan State University, who offered guidance and encouragement; my sister, Anita Santiago and her family; my friends; Lloyd Pflueger, Tom and Christine Ryba, Win and Caroline Wilkinson, Barbara Holdrege, Mark and Jude Boyer, Brion and Gretchen Lewis; and my students at Michigan State University.
CHAPTER 1

Introduction and Methodological Considerations

Abhinavagupta and the Heart of Siva

The symbol of the Heart plays a central role in the tantric writings of Abhinavagupta. As the French scholar Lilian Silburn has said about the Heart,

La position des sivaites kasmiriens a l’égard du yoga et de jnana ne se comprend bien que par rapport aux trois energies du triangle du coeur (trikona et trisula) et dans la perspective des trois voies qui en découlent. Toute la manifestation évolue a partir de ce triangle cointre un flot fremeissant et pur du Coeur divin et c’est aussi, par le fremeissement de son propre coeur, que l’homme retrouve le centre du trikona, en prenant conscience de soi.¹

This succinct statement by one of the eminent scholars of the non-dual Shaivism of Kashmir sets forth the theme of this book.² We wish to understand what Abhinavagupta means by the Heart. In the process of unpacking the meanings that are condensed in the symbol of the Heart, we will gain access to the central religious vision of the great Kashmiri teacher.

Although the writings of Abhinavagupta are lengthy and complex, running through them all is a stance on reality that is derived from his own enlightenment experiences and training under his guru, Sambhunatha.³ This stance, or approach to reality, is so influential and pervasive in Abhinavagupta’s writings that it may be called his central religious vision. It is the Heart which functions as one of the primary and unifying symbols
of this religious vision. By examining the symbol of the Heart, access is gained to a key entry point into this central religious vision.

Abhinavagupta's religious vision is intimately bound up with the symbol of the Heart on three important levels. The first is the reality of the Heart as Siva, which refers to the ultimacy and transcendence of Siva in the Heart. The key term here is *anuttara-tattva*, that is, the principle of the Ultimate. The second level involves Abhinavagupta's teachings about the methods and techniques that must be employed in order to approach the Ultimate reality of the Heart and transform it into a living human reality. The most direct and effortless method of realization is known as the *Sambhavopaya*. The third level intimates the nature of the state of realization of the Heart. This process of realization is termed *hrdayangamibhuta*, which literally means "become something that moves in the Heart," and can be more simply translated as "experiential replication." The state of realization is often called *Bhairavata* - the condition of Bhairava. Thus, the overall structure of this study will follow these three 'levels' of the Heart: Ultimate reality, method, and realization.

In the attempt to understand the Heart, our understanding of Abhinavagupta's central religious vision will be enhanced. However, this search for understanding holds both promise and problems. We are liable to misunderstand Abhinavagupta as long as our penetration into his thought is incomplete. Indeed, Abhinavagupta defines error as incomplete knowledge (*apurnakhyati*). The promise is that Abhinavagupta's thought will so engage us that we will persist in our study. Yet it must be recognized that claims to complete understanding are foolhardy, for deciphering the work of Abhinavagupta, like understanding any great thinker, is an enormous task, and ultimately must be a collective enterprise. Therefore we can engage in an initial foray, an exploratory journey, impelled by the promise of the enormous riches of the profundity of the Shaiva vision of reality,

Can we hope completely to understand Abhinavagupta? We must be fully aware that for every element of his thought we study, many more remain to be discussed before we can claim a true understanding of this great teacher and the tradition from which he stems.

We immediately encounter an important and central cross-cultural perplexity. We have been using the term *understand* in its commonly accepted denotation: to have a thorough technical acquaintance with something. The term may be used in a stronger sense: Abhinavagupta distinguishes between an understanding that is purely intellectual, and one gained from experiential knowledge. There is an important sense in which to understand the Heart actually requires replicating the journey of return that is the tantric *sadhana*: we must play Siva's game to its most
serious and hilarious conclusion, which is the unmasking of Siva within ourselves.

A scholarly study, however, cannot insist on such a radical form of understanding. As a consequence we must here limit the notion of understanding to a form of sympathetic perception through which we attempt to see and feel our way into the still alien universe of tantric sadhana. However, this limitation of understanding necessarily obscures the most important meaning of the Heart of Abhinavagupta: that a religious vision is not something simply intellectual, emotional, or imagined, but rather it is a pulsating, powerful experience that completely transforms our ordinary and routinized perceptions of reality.

Nevertheless, a scholarly study can contribute something to the collective task of interpreting and understanding the work of Abhinavagupta. In addition, it may embolden a few readers to the existential task of experiential replication. This emphasis on the importance of the experiential dimension is, of course, not unique to Abhinavagupta. It is a theme that is sounded in perhaps every Indian religious environment as far back as the Veda and the Vedic soma. Certainly, Abhinavagupta was entirely committed to the awakening knowledge of sadhana. He taught from a level of complete spiritual awakening with the authority of one who was considered a Siva incarnate. In the opening verses of what is perhaps his most complex work, the Paratrimsika-vivarana, he clearly states that his purpose in composing the work is the fulfillment of his religious duty to awaken his disciples. As a result, it would constitute a grave error to approach his writings on the tantric sadhana as if they were intellectual exercises or an abstract theology rather than symbolic transcriptions of powerful religious experiences. Abhinavagupta was not just an arranger or systematizer of a received tradition, although he was very talented at these tasks. His writings on the tantric sadhana hold the vibrant power of radically transformative teachings which are designed to be passed on to disciples so that they too may come to awakening. In this context, Abhinavagupta stands as the enlightened guru treating with utmost seriousness and clarity the theoretical bases and essential techniques that bring a person to the highest possible experiential realizations.

Often, various life sketches of Abhinavagupta place great emphasis on his many different teachers. The rigorous and encyclopedic training he received from them undoubtedly accounts for the refined precision and informed character of his writings. Certainly Abhinavagupta's was a universal intellect which encompassed the major disciplines of his time. However, scholars have placed less emphasis on Abhinavagupta's tantric initiation and subsequent awakening at the feet of one teacher: Sri Sambhunatha. This teacher brought Abhinavagupta to a realization and vision
which transcended the intellect; and in order to understand Abhinavagupta's usage of the symbol of the Heart, this vision is of utmost importance. Abhinavagupta's disquisitions on the Heart must be read as transcriptions into language of the awakening he received from Sambhunatha. They form the living, experiential core of an enlightened teaching about the Tantra. At the same time, Abhinavagupta's precise and informed intellect frames this core in a systematic rendering. It is this impressive accomplishment that makes his writings worthy of sustained scrutiny and investigation.

**Overall Structure and Purpose of the Book**

The purpose of this book is to examine the symbol of the Heart of Siva as it is taught in the writings of the tenth-century Kashmiri teacher, Abhinavagupta. As a potent and numinous symbol, the Heart of Siva draws us to the center of an enormous web of meaning which reflects the religious vision of Abhinavagupta. Abhinavagupta employs the symbol of the Heart as part of a system, school, or method which he termed Kaula, or more generally, and with a wider reference, Tantra. These terms will receive sustained scrutiny later on. For now, suffice it to say that in order to enter into an examination of the Heart, we must also explore the wider context of the tantric preceptorial line known as the Kaula lineage. It is precisely in those portions of Abhinavagupta's writings that we may term Kaula that we find the Heart appearing most frequently as a symbol for the Ultimate. It is in this lineage that Abhinavagupta claims to have been enlightened.

It is interesting that most descriptions of the Kaula line refer to it as a school devoted almost exclusively to radical spiritual practices and to meditation methods, and with little or no metaphysical or doctrinal speculations of its own. There can be little doubt that this tradition stressed direct experience and "appropriation" (svikartavya) over the more speculative activities of system-building and doctrinal argumentation. Nevertheless, practices as complex and as powerful as those utilized by the Kaulas neither develop nor are applied in a conceptual void. By deciphering the symbol of the Heart and attempting to read the meanings condensed in it, we will gain access to the conceptual matrix that surrounds the practices and methods of the Kaula lineage. In doing so we will encounter one of the earliest, most explicit, and sophisticated theoretical formulations of the processes of Hindu tantric Yoga.

We might call this study an investigation of Abhinavagupta's theology of the Heart. Yet we must exercise caution with the term theology. In his study of Siva as prakasa Alper comments:
INTRODUCTION

I find it clearer . . . to use the phrase 'Saivite theology' more narrowly to mean the systematic articulation of the Saivite viewpoint in accordance with standards common to Indian philosophizing in general and the defense of that viewpoint with arguments designed to demonstrate its superiority to various alternatives. Saivism becomes an object of sustained and critical reflection in that sense at a comparatively late date.\textsuperscript{15}

It is apparent from this particular usage of the phrase "Saivite theology" that Alper reserves the term for those portions of Abhinavagupta's opus which we can more generally characterize as philosophical, that is, the \textit{lśvara-pratīyabhijna-vimarsini} (\textit{IPv}) and the \textit{lśvara-pratīyabhijna-vivṛti vimarsini} (\textit{iPvv}).\textsuperscript{16} In these works, doctrinal schemes are systematically expounded and defended in the accepted darsana or sāstra style.

In this same context Alper also reflects Nintan Smart's observations on the relationship in Indian philosophy between religious experience and metaphysics.\textsuperscript{17}

I am influenced . . . by the observation of Ninian Smart that metaphysical assertions are often disguised spiritual claims, and that therefore one may not understand a doctrinal scheme without attending to the sometimes complex 'religious activities which give [it] life and point.\textsuperscript{18}

Smart puts the matter more directly:

It involves too the assumption that the determination of metaphysics by forms of religious experience and practice occurs that way round and not conversely... it would be indeed odd if metaphysics, considered as sets of propositions to be entertained and believed by people, should have the enormous effect of creating out of nothing the powerful religious experiences of both great teachers and ordinary folk."

This study does not limit itself to an examination of "Saivite theology" in the narrow sense that Alper gives to it. If, with Alper, we are convinced that "Abhinava's theology is an organic expression of the Saiva spirit, rooted in a precise, specifiable set of religious experiences"\textsuperscript{20} then our concern is with an examination of the "roots" of "Saivite theology." We are looking for the environments where those religious experiences occurred, insofar as their descriptions can be reconstructed through the texts. There is a sense in which the tantric environments of Abhinavagupta's work are thus logically prior to the theology. Thus our search leads to the pre-theological, practical-experiential contexts which are precisely the tantric, Kaula portions of his writings.

There are references to the Heart and Kaula environments scattered
throughout Abhinavagupta's writings. There is one text, however, that is given over in its entirety to the symbol of the Heart. It is perhaps one of the most important expositions of the inner meanings of the Kaula lineage in the corpus of Abhinavagupta's extant writings. The text is the *Paratrisika-laghuvritti* (*PTlv*), also known as the *Anuttara-tattva-vimarsini*. It is a medium length commentary on thirty-six agamic verses which purport to form the last part of the *Rudra-yamala-tantra*. For the purposes of this study, the *PTlv* forms the primary textual support. These agamic verses and Abhinavagupta's commentary on them focus on a particular dimension of religious experience: the attainment of liberation through the experience of the Heart. In discussing *agama-s* in general terms, the Dutch scholar Jan Gonda states:

> Although they do contain what might be called philosophical and theological analyses . . . they do not require systematic interpretation in the light of a traditional philosophical system . . . . Their philosophical interest is limited. For their authors the attainment of the highest goal is much more essential than metaphysical speculation.

While this statement is generally correct, it is readily apparent, given what has been said above, that *agamic texts* are exceedingly relevant to an understanding of theological and philosophical environments.

Of course, it is also necessary to consult relevant passages in several of Abhinavagupta's other writings, works by his close disciple and interpreter, Ksemaraja, as well as other texts of the earlier non-dual Kashmir Shaiva traditions. Of Abhinavagupta's writings on the Tantra, his massive and encyclopedic work, the *Tantraloka*, contains three revealing chapters that are almost exclusively devoted to the Kaula lineage. Also relevant are portions of the *Paratrimisika-vivarana* (*PTv*), the *Tantrasara* (*TS*), the *Malini-vijaya-vartika* (*MVv*), and the *Isvara-pratyabhijna-vimarsini* (*IPv*). Brief passages in Ksemaraja's *Siva-sutra-vimarsini* (*SSv*) and *Parapravesika* are also revealing.

The task of translation could be extended indefinitely. The riches of the *TA* and the *PTv* are enormous and still await further exploration. For the present, a close examination of the *PTlv* illuminates the most concentrated Heart environment in Abhinavagupta's writings and fixes the bounds of the study within manageable limits. It must be emphasized, however, that this is a study of a symbol, the Heart. While the symbol presents inexhaustible depths of investigation, it also provides the main focus and boundaries of the study. This volume does not purport to present an exhaustive study of the *PTlv*, although an examination of the *Heart* in fact generates analysis of a great deal of the text. Nor can this be a
complete treatment of the Kaula lineage; though again, in examining the Heart, we open up for study its central conceptual matrix.

On a more general level, the book attempts an interpretation of the functioning within the non-dual Kashmiri Shaiva traditions of the relationship between a religious symbol and the domains of religious practice and religious experience. This task requires that we examine the Heart of Siva as a symbol of Ultimate reality, while remaining alert to the experiential dimension of the Heart which is attained by a series of powerful methods and practices. This investigation will reveal the central theoretical framework on which the Shaiva religio-mystical praxis is based. While, as we shall see, the tradition presents us with a bewildering mass of details and specificities, many of which remain to be sorted out, the outlines of the underlying theoretical structure that emerge from this mass are of an admirably elegant simplicity - which is very different from saying that they are easy to understand!

The remainder of the first chapter will treat some general methodological considerations drawn from what scholars have to say about symbolism and the study of symbols in the history of religions, and will proceed to examine some of the limitations and difficulties of any study of this nature. Finally, the chapter will conclude with a review of some of the scholarly contributions on the non-dual Kashmiri Shaivas.

In the second chapter, historical analysis will reveal three concentric circles. The first circle situates the non-dual Kashmiri Shaivas in the larger sphere of Indian religiosity. We shall see that this tradition occurs at the intersection of the Tantra and Shaiva traditions. An outline of trends in Shaivism, as they precede the developments in Kashmir, will be followed by the very important tantric components of the non-dual Kashmir Shaiva tradition. Consequently, this chapter begins by offering some general comments on the nature of the Hindu Tantra, a phenomenon which is rather difficult to circumscribe. We shall then sketch out the specific tantric lineage in question, the Kaula lineage: its literature and the main components of its practices and teachings. The second concentric circle will then detail the little we know about the non-dual Kashmir Shaiva traditions themselves, especially that portion of the tradition that precedes Abhinavagupta. It will be clear that the historical currents that lead up to Abhinavagupta are by no means easy to delineate. The final circle offers an examination of the life and extant works of Abhinavagupta. This chapter also contains references to many of the important terms, doctrines, teachings, and arguments that are necessary to understand the Heart. Of course, one could write an entire book on the non-dual Kashmir Shaiva "philosophy." Our considerations here are necessarily limited by the purpose of understanding the Heart to what we might term the explanatory
THE TRIADIC HEART OF SIVA

framework. In fact, many of these terms and doctrines have been only superficially examined by scholars and pose important interpretive problems of their own: Siva, sakti, consciousness (samvid), freedom (svatantrya), the thirty six tattva-s, the three upaya-s, mantra, and jivan-mukti.

In the third chapter we will examine the symbol of the Heart in India prior to Abhinavagupta. We will look at descriptions of the reality of the Heart as they occur in the Veda, in the Upanisad-s, and in various Yoga texts. We shall then examine the Heart as it occurs in some of the early Shaiva texts of Kashmir.

Chapters 4 through 9 form the main body of the work. These chapters contain a look at the reality of the Heart, the methods that lead to the Heart and the nature of the realization of the Heart. The approach will be primarily conceptual, that is, terminological and textual. Given the perspective in which Siva is the only reality, many of the terms represent aspects of Siva's being. Each term does not have a totally different entity as an ultimate referent. The purpose of the variety of terms seems to be to emphasize specific aspects, and to allow for different nuances, different moments of the experience of Siva, of the ways in which Siva comes to 'recognize' himself, on the multi-levelled journey of Siva's return to himself. All of these terms can be seen as being interrelated in an enormous web. They are all linked, like chain in chain mail. While it is tempting to try to explicate all possible links between the terms, the task would be infinite: every new explication uncovers new links which must themselves be explicated. We shall have to be content with tracing a few of the major lines of relationship between the terms, to place them in their proper context, and to indicate the general outlines of the possible interrelationships. This study will look in depth at these areas of the 'web': in Chapter 4, we will consider the term hrdaya, Heart, and the related term anuttara, Ultimate, including the prevalence of notions about light, prakasa, and the self-referential nature of consciousness, vimarsa, as well as the Heart as 'center', madhya. In Chapter 5, we turn to the term kula, 'group', and the related ideas about triangularity, sexuality, and the divine pair, Siva-sakti samghatta. In Chapter 6, we examine the notion of spanda, the concept of visarga, 'emission', and ideas concerning 'vibration', 'sounding', and expansion and contraction. In Chapter 7, a series of related notions about the Heart will be scrutinized. These might be termed natural metaphors for the Heart: the term khecari, 'moving-in-the-void', and images of the Heart as a sky, abyss, and ocean, the soma-moon connection along with the ideas about fire and sun, and the Heart as lotus, padma. In Chapter 8, we will focus on the Heart as mantra, especially the central mantra SAUH. The examination of the notions of visarga and mantra will lead us to the methods that produce enlightenment by relying not
on individual effort, but rather on the awakening and channelling of the power of consciousness itself. Meditation, the tool par excellence, is shown not to involve a forcible control over the mind, but an immersion, a sinking, a repose, which allows the subtle currents already operative in the mind to channel it in the direction of the anuttara. Finally, in Chapter 9 we will conclude with a consideration of the Heart as unitive realization, the goal of the tantric practitioner, including a look at the notions of the levels of bliss, the connection to prana, and the ultimate experience of the universal bliss, jagadananda. We will conclude with a brief look at the redefinition of the nature of enlightenment proposed by the non-dual Kashmir Shaivas and, more especially, by Abhinavagupta. The key element of this redefinition is that the strictly inward nature of ultimate enlightenment has appended to it an open-eyed state where every object is seen as ultimately formed of consciousness itself. This unitive vision of outward reality erases the polarities between inner and outer, between life and death. It also allows the jivanmukta to become an embodied, powerful siddha, who possesses not just an ultimate vision, but is empowered by that vision to act and create as Siva himself. This new definition of the goal of spiritual life becomes one of the hallmarks of the later tantric tradition.

Approaches to a Symbol: Symbol and Religious Vision

The symbol of the Heart is a key entry point into the "pretheological" portions of Abhinavagupta's writings. We should look briefly at the notion of a symbol, and what we understand to be the process of interpretation of a symbol.

There is little doubt that much of what we do in religious studies can be subsumed under the category of symbolic analysis. Ninian Smart tells us, "We can see that an essential ingredient of the modern study of religion is 'symbolic analysis'." Similarly, Mircea Eliade comments, "One could say then, that all research undertaken on a religious subject implies the study of religious symbolism."

Whether it be interpreting a text, a ritual, a myth, a sacred dance, or a piece of sculpture, we are involved in an attempt to derive meanings from various sorts of symbols. Scholars argue about exactly what is involved in this process of interpretation and what the methods involved in such interpretation should be. In spelling out the approach for this study, it is appropriate at this point to look at some of the statements scholars have made on the nature of symbols and their interpretation.

A good place to begin is with Suzanne Langer's definition of a symbol in her important study. *Philosophy in a New Key*:
Symbols are not proxy for their objects, but are vehicles for the conception of objects. In talking about things we have conceptions of them, not the things themselves; and it is the conceptions, not the things, that symbols directly mean. Wherever a symbol operates, there is a meaning; and conversely different classes of experience - say, reason, intuition, appreciation correspond to different types of symbolic mediation.

Langer distinguishes three types of symbols: discursive symbols, presentational symbols and artistic symbols. Discursive symbols are used in spoken and written language and as such have a vocabulary, a syntax, and the possibility of translation of one discursive symbol in terms of others. Presentational symbols, such as pictures, are wordless "presentations" of meaning. They are nondiscursive and untranslatable. A presentational symbol cannot be defined within its own system. It cannot directly convey generalities.

Finally, Langer tells us:

An artistic symbol - which may be a product of human craftsmanship, or (on a purely personal level) something in nature seen as a 'significant form' - has more than discursive and presentational meaning; its form as such, as a sensory phenomenon, has what I have called 'implicit' meaning, like rite and myth, but of a more catholic sort. It has what L. A. Reid called 'tertiary subject matter,' beyond the reach of 'primary imagination' and even the 'secondary imagination' that sees metaphorically. 'Tertiary subject-matter' is subject-matter imaginatively experienced in the work of art . . . , something which cannot be apprehended apart from the work, though theoretically distinguishable from its expressiveness.

Langer's is, of course, just one of many approaches to the nature of symbols. However, in view of her general analysis of symbols, we might ask about the nature of the specific religious symbol involved in this study, the Heart. Where does it fit into this analysis? Certainly the Heart, as a word that occurs in a text, is a discursive symbol. It is also, quite clearly, more than just a discursive symbol. We can see this when we ask: what is the meaning of the Heart, in what sense is it a 'vehicle'? In answering this question, we become aware of the many levels of meaning that are conveyed by the religious symbol. It is not easy to say directly what the religious symbol means, because we sense in it a density, a compression of meaning, which is precisely what contributes to its power. The Heart as it appears in the Shaiva texts is surely a more "powerful" discursive symbol than the word table, which we encounter in ordinary conversation. As with the artistic symbol, we sense in it deeper levels of meaning, some of which may be translated into other discursive symbols. Much of the power of
the religious symbol seems to resonate nondiscursively and untranslatably in the numinosity of the symbol. What other insights does modern scholarship offer?

Anthropologist Clifford Geertz clearly relies on Langer's notion of a symbol in his discussions of culture.\textsuperscript{35} Geertz defines culture in terms of symbolism.

The term culture denotes an historically transmitted pattern of meanings embodied in symbols, a system of inherited conceptions expressed in symbolic forms by means of which men communicate, perpetuate and develop their knowledge about and attitudes towards life.\textsuperscript{36}

Geertz continues:

Sacred symbols function to synthesize a people's ethos - the tone, character, and quality of their life, its moral and aesthetic style and mood - and their world view - the picture they have of the way things in sheer actuality are, their most comprehensive ideas of order.\textsuperscript{37}

Geertz then characterizes "systems or complexes of symbols" as "extrinsic sources of information" because

they lie outside the boundaries of the individual organism as such in that intersubjective world of common understandings into which all human individuals are born . . . \textsuperscript{38}

and because " . . . they provide a blueprint or template in terms of which processes external to themselves can be given a definite form."\textsuperscript{39} Geertz elucidates the important distinction between the sense in which symbols are models for and models of:

Unlike genes, and other non-symbolic information sources, which are only models for, not models of, culture patterns (i.e. systems or complexes of symbols) have an intrinsic double aspect: they give meaning, i.e., objective conceptual form, to social and psychological reality both by shaping themselves to it and by shaping it to themselves.\textsuperscript{40}

This study will show that the Heart functions clearly as both a model of Ultimate reality and a model for the attainment of that Ultimate reality.

Larson has pointed out that for the specific case of the interpretation of religious symbols, Geertz's discussion is made more relevant by Ricoeur. As Larson puts it,
Paul Ricoeur supplements Geertz's discussion when he points out . . . that "symbols" (especially religious symbols) tend always to have a "double intentionality," that is to say, a "first level" obvious and literal signification as well as a "second level" indirect and oblique signification which is "opaque," "analogical," and characterized by an "inexhaustible depth." The interpretation of a symbol or complex of symbols is, thus, never simply an exercise in translation, difficult as that is. Interpretation, rather, is an attempt to understand and give expression to the "transparency of an enigma" which any symbol or symbol-complex represents.\(^{41}\)

Given this "double intentionality" of religious symbols, the process of interpretation is a complex one. What is most interesting to evoke is the second level of the symbol, its indirect and oblique signification. This is what gives the religious meaning its power and efficacy. Of course, this oblique level presents the greatest difficulties of interpretation.

What of Abhinavagupta's own analysis of meaning in poetic language? Agreeing with Anandavardhana, Abhinavagupta accepts three levels of meaning.\(^{42}\) He tells us that a word may have three levels of signification:

1. *abhidha* - conventional meaning
2. *laksana* - secondary meaning
3. *vyanjana* - suggestive meaning or resonance.

The term *hrdaya*, the Heart, is, using Langer's terminology, a discursive symbol. In its conventional and secondary meanings, *hrdaya* refers to our conceptions of the physical organ and essence respectively. These meanings correspond to Ricoeur's first level of signification. The second level, then, corresponds to the notion of resonance. It is this resonance - opaque, analogical, and of inexhaustible depth - that constitutes the power and potency of the religious symbol.\(^{43}\) In addition, this resonance of some religious symbols seems to be the way in which individual symbols are able to contain, through 'compression' or 'condensation', the entire religious teaching of the environment in which they are revered. This may be termed the 'totalizing', or perhaps following Geertz, the 'synthesizing' function of the symbol. In this function, the religious symbol, though only one word of the larger language of which it is a member, has the peculiar property of being linked to, and in some sense containing within it, every other word of the language.

The historian of religion, Mircea Eliade, has written extensively on the process of interpretation of religious symbols. Several recent studies underscore the importance of the Indian tradition, especially of Tantrism in understanding Eliade's vision. In his study on Eliade, Guilford Dudley notes:
Thomas Altizer has argued that Eliade's archaic ontology remains essentially Indian in its orientation. Specifically Altizer suggests that the principle of unity behind the sacred rests on a "pre-temporal and pre-cosmic totality" to which the "coincidentia oppositorum" points in its Hindu, and specifically Tantric form.  

In studying Abhinavagupta we are entering a peculiarly "Eliadean" universe, in which Eliade's insights and interpretations seem peculiarly apt and well suited.

Eliade summarizes his position on religious symbolism by suggesting that religious symbols are capable of revealing a modality of the real or a structure of the World that is not evident on the level of immediate experience. An essential characteristic of religious symbolism is its multivalence, its capacity to express simultaneously a number of meanings whose continuity is not evident on the plane of immediate experience. This capacity of religious symbolism to reveal a multitude of structurally coherent meanings has an important consequence. The symbol is thus able to reveal a perspective in which heterogeneous realities are susceptible of articulation into a whole or even into a "system".

In another important study Eliade emphasizes that various symbols come to form an "autonomous system"; they "... make up a symbolic system which in a sense pre-existed them all. We are therefore ... justified in speaking of a 'logic of symbols'." He continues, "From this point of view symbolism appears to be a 'language' understood by all members of a community and meaningless to outsiders."  

Finally, Eliade alerts us to a process which he terms the "imperialism" of certain symbols:

The "imperialism" of the victorious religious forms is also explainable by this tendency of every hierophany or theophany to become everything - that is, to sum up in itself all manifestations of the holy, to incorporate all the immense morphology of the sacred.

In our study of the Heart we will watch the unfolding of the "system of meaning" and "language" of the symbol. These scholarly insights and observations can help us, in the remaining chapters of this study, to explore the symbol of the Heart.

**Limitations and Difficulties**

Many of this study's limitations in scope have already been alluded to. Beyond the sheer richness of the tradition there are various limitations
and difficulties that face any investigator of these materials, and it may be useful to call attention to some of these. Perhaps the most important difficulty, for which there is no easy solution, is that the Kaula, and more generally the tantric aspects of Abhinavagupta's thought, form an undeniably esoteric tradition. This attribute of esotericism means more than that the teachings are difficult, and even at times obscure, which sometimes they are. In order to interpret the tradition properly, and not be taken in by some misleading surface meaning which has been deliberately introduced to exclude meddling souls, ideally one would have to be initiated into the tradition. However, even if it were possible to receive such an initiation, one could not really be certain that the meanings and interpretations derived from the initiation would correspond to the tradition as it was in the tenth century.

Moreover, as we shall see, the Kaula teachings are not so much a philosophy as they are a method for the attainment of enlightenment experiences. While one might wish to garner from initiation some insights to assist in deciphering difficult points of doctrine and obscure technical terms, in fact, the esotericism of the tradition does not actually lie so much with doctrine. Instead, the tradition's esoteric nature relates to its discussion and description of nonordinary states of reality. Thus it is not appropriate to approach Abhinavagupta's tantric formulations as one would approach a rational system. Rather, in approaching the tradition, we will encounter an intuitional and symbolic method that is the direct outgrowth of the phenomenology of tantric meditation.

This study's contention is that it is only through symbols that Abhinavagupta is able to convey in language the content of the enlightenment experiences. Thus the tradition is esoteric in large measure because ultimately it is necessary to undergo the process of experiential replication before the symbols will speak to us completely. Abhinavagupta makes this precise point in stating that only when the lotus of the Heart has been opened by the "descent of energy" will the truth be revealed.\textsuperscript{50} Not even the most acute reasoning powers in the world could produce this revelation. Once the Heart has been "opened," continues Abhinavagupta, discursive thought can penetrate ever more closely to the Ultimate.\textsuperscript{51}

In addition to this rather formidable obstacle which interpreters of non-dual Kashmiri Shaivism as well as of other meditation traditions must face, we must deal with the simple fact that Abhinavagupta, by his own admission, does not tell all. At several points in his texts there is the frustrating statement that the subject matter under discussion is highly secret, and that too much has already been said. The discussion of that topic then breaks off.\textsuperscript{52} In the TA, while discussing a controversial theory about purity, Abhinavagupta states that ancient enlightened sages kept
it secret in order not to perturb the established order of the world.\textsuperscript{53} Statements of this kind lead to fruitless, yet tantalizing, speculation as to how many secrets were not recorded in the texts and were imparted only orally to select disciples.

The great fluidity of the teaching is apparent in the texts. The teachings of the Kaula current form an inner teaching in relation to the more formally philosophical outer teaching of, for example, the IP\textsubscript{v} and IP\textsubscript{vv}, where the concern is not so much the enlightenment of disciples as the argumentation of a Shaiva viewpoint vis-a-vis other Indian \textit{darsana}-\textit{s}. As a consequence, in more tantric materials, there is not so much sustained and rigorous argumentation as there is authoritative exposition which allows itself a kind of descriptive adaptability. The point is to enlighten disciples, and different and apparently contradictory versions of the same teachings do occur. Abhinavagupta learned well from the Buddhists' notions of "excellence in the choice of means"\textsuperscript{54} and the "emptiness" or "instrumental" character of language. In the Kaula tradition there is a basic tendency to be suspicious of language. Conventional language is, after all, one of the building blocks of bondage. \textit{Vikalpa} (verbalization) constitutes by definition the wavering, polarized state of the bound and finite person disenfranchised and separated from his powerful source. Language, however, can also be used to free a person from bondage. In this usage, language is primarily an explanatory inducement towards the liberating experience. Perhaps even more importantly, it constitutes part of the practice, in the form of "unconventional"\textsuperscript{55} mantric language, which leads to the \textit{avikalpa} transcendence of both duality and language itself, and involves the entrance into silence. Insofar as all philosophical structures and speculative systems are constructions of a dual, descriptive language, they must be abandoned for the \textit{siddha} to dwell in the immediate perception of non-dual reality.

All of this is to say that Abhinavagupta is a master in his use of language. In fact, he does not despise the intellect, and his powers of argumentation are impressive. Nevertheless, he often refers to consciousness as the "shadow of one's own hat." The more we try to step on the shadow by moving towards it, the more it eludes us.\textsuperscript{56} So too, ultimate reality cannot be circumscribed in words. It is a reality that is prior to all descriptions and to all arguments.

In addition to these rather formidable difficulties inherent in interpreting the tradition itself, there are several other obstacles. These have more to do with the current lack of accessories and aids to the study of these traditions. Many of the primary texts of the tradition have been published in Sanskrit, but these editions have not been critically edited." Consequently, these Sanskrit texts are full of doubtful readings, mistakes,
and transcription errors. Where other manuscripts of the same texts are available, it is possible for the scholar to attempt to collate a version of the text. Such, for example, has been one of the great contributions of Raniero Gnoli, who has published some eight hundred emendations to the published edition of the P7V, a text of some three hundred pages. Unfortunately, this task has not been accomplished for the major works of Abhinavagupta, much less for the other works in the tradition. Thus, the scholar must approach these published editions with a careful eye toward possible textual errors. Until the task of collecting as many manuscripts of these texts as possible and producing from them carefully and critically edited versions is carried out, large areas of uncertainty will remain with respect to the reading of these texts.

In addition, many of the crucial texts of the tradition are lost. Abhinavagupta refers to various agama-s which are apparently no longer extant. Moreover, many of the texts of the tradition, including approximately half of Abhinavagupta's writings, apparently have not survived. This inestimable loss must be kept in mind, especially when making overall assessments of the nature of the tradition.

In the light of this problem, it is scarcely surprising that secondary literature on the tradition is scarce. The next section of the study will discuss the few excellent works that are available. Even among these, however, we find a dearth of introductory surveys, handbooks, or concordances of terms, and there are few attempts at a kind of overarching theoretical clarification. The bulk of the studies produced until now have been, for the most part, advanced studies of specific texts.

This state of scholarship should not really be surprising. The non-dual Kashmir Shaiva traditions represent the intersection of Shaivism and Tantrism. Both the history and theoretical clarification of Shaivism, as well as of Tantrism, remain to be seriously addressed. There are great lacunae in our knowledge even of the historical precedents to the Shaiva traditions of Kashmir themselves. We know very little about what happened in Kashmir from the second to the ninth centuries prior to Vasugupta and the Siva-sutra-s. These are some of the preconditions that limit and indeed mold scholarship on this tradition.

**Problem of "Schools" of Kashmir Shaivism**

In the notes to his penetrating article on Siva, Alper suggests that there has been an unfortunate looseness in discussion of "schools," "sects," "traditions," and "movements" of Kasmiri Saivism. All that is really clear is
that there were a series of overlapping preceptorial lines, and a plentitude of spiritual techniques available to each teacher. The exact social and ideological referent of terms such as \textit{pratyabhijna}, \textit{spanda}, \textit{Agama}, \textit{krama}, and \textit{kula}, remains to be worked out, as does the systematic relationship between these groups.\textsuperscript{61}

This important and insightful comment serves to balance a somewhat premature tendency by scholars to speak of the "schools" or "systems" of Kashmiri Shaivism. The distinctions and dividing lines between the different Shaivite groups simply were not hard and fast.\textsuperscript{62} For example, one has merely to examine the \textit{TA} to see that Abhinavagupta freely intermixes doctrines drawn from the Krama and the Kula lineages. There seems to have been only limited adversarial argumentation between these groups, and initiates into one tradition apparently often complemented their practices with techniques drawn from other groups. Natural groupings probably occurred simply as a result of adherence to one or another teacher and his lineage. Yet the case of Abhinavagupta is particularly interesting, for he participated in one way or another in all of these Shaivite groups. Consequently, scholars of non-dual Kashmir Shaivism often have great difficulty in specifying what the particular doctrinal and practical differences might be between a text that avows its allegiance to the Krama lineage and one which declares itself as belonging to the Kaula tradition.\textsuperscript{63}

A review of the history of the tradition shows that a Spanda group occurs as well as a Pratyabhijna group; and we learn that Abhinavagupta was taught Kula, Krama, Mata, and Trika \textit{darsana}. The lines of demarcation that exist between these groups are only very slowly emerging now. Alper's comment is important to save us from too rigidly concretizing these groups. While not identical, the groups bear a strong family resemblance; in many cases, the differences seem to rest on rather minor points of doctrinal emphasis or even on the preference for specific technical terms or ritual practices not favored by one of the other groups.

Throughout this book the expression \textit{non-dual Kashmir Shaivism} has been used to denote the non-dual traditions of tantric Shaivism in Kashmir. The older designation, \textit{Kashmir Shaivism}, plain and simple is, however, deeply problematic. It was apparently first coined as the title of J. C. Chatterji's small, pioneering monograph which appeared in 1914.\textsuperscript{64} Since that time the phrase has been almost universally employed by scholars as if there were accepted agreement as to its meaning. Unfortunately, the expression \textit{Kashmir Shaivism} is in fact highly ambiguous and imprecise, as has been recently pointed out by Sanderson.\textsuperscript{65} The expression is ambiguous in at least two senses: first, there were several varieties of Shaivism in Kashmir which were deeply divided, both doctrinally and
ritually. Secondly, the teachings of Shaivism as propounded in Kashmir are not exclusive to that region. Especially, varieties of dualistic Shaivism are in no way exclusive to Kashmir. Sanderson shows that there were at least three major traditions of Shaivism in Kashmir: (1) a non-dualistic tantric tradition that includes the various lineages of the Trika, Krama and, later, the Kaula; (2) a dualistic and highly conservative tradition of the Shaiva Siddhanta; and (3) a cult of the worship of Svacchandabhairava that fell somewhere in between the two other traditions. Of these three it is the first which has been generally and imprecisely referred to as Kashmir Shaivism. The problem with abandoning this expression centers on what to substitute in its place. Sanderson refers to the Tantric Shaivism of Kashmir. Padoux explains the term as follows:

the non-dualist forms of Shaivism that flourished approximately between the ninth and thirteenth centuries in Kashmir and other parts of North India, but also elsewhere.

Alper comments:

The older, a complex congeries of movements, was centered in Kashmir. It should be noted, however, that none of the movements prominent in Kashmir called themselves, nor should they be called "Kashmir Shaivism." Systematic and philosophical reflection on the Saivagamas was highly advanced within the Shaiva traditions associated with Kashmir.

From these statements, it can be seen that there remain a number of problems to be worked out before a single, convenient term for the tradition is evolved by scholars. For the present the expression non-dual Kashmir Shaivism has been chosen. While it is slightly awkward, it does have the virtue of being precise in terms of the problems we have just discussed.

**Brief Review of Scholarship on Non-Dual Shaivism of Kashmir**

K. C. Pandey, in the introduction to his massive and indispensable book on Abhinavagupta, describes the difficulties he faced as a young research scholar in Kashmir in the 1930s attempting to gain access to the manuscripts of the main texts of the non-dual Kashmir Shaiva tradition. He recounts how the Kashmir government denied his requests to have access to the two main libraries where the bulk of the extant manuscripts of Abhinavagupta's works are kept. At the suggestion of his brother, Pandey looked for copies of the manuscripts in private houses in Kashmir and was successful in securing the materials he needed for his study.
INTRODUCTION

This is an interesting note on the difficult beginnings of modern scholarship on this tradition - all the more so because it is due to the same Research Department of the Government of Kashmir that most scholars now have access to the majority of the texts of the non-dual Kashmir Shaiva tradition. Perhaps the most significant event in Kashmir Shaiva scholarship, and certainly the event that has made the rest of modern scholarship on these traditions truly possible, has been the publication (now numbering some eighty-seven volumes) beginning in the early part of the century of the Kashmir Series of Texts and Studies (KSTS). Here the scholar can find reprinted all of the important texts of the early Kashmir Shaiva tradition: Siva-sutra-s with various commentaries, the Spanda-karika-s with commentaries, as well as editions of the major religio-philosophical texts by Abhinavagupta (but not, interestingly, any of his works on aesthetics).

Unfortunately, in many cases these texts appear not to have been critically edited. Often it seems that the printed text is based upon a single manuscript. Where several manuscripts are in existence, some variant readings are noted, but no systematic effort at compiling an error-free edition appears to have been made. As a result, the reading of these complex Sanskrit texts is made even more difficult by the constant suspicion that what appears to be a particularly obscure passage is in fact a misreading or a reproduction of a scribal error.

It is disturbing to realize the real neglect under which both the non-dual Kashmir Shaiva tradition and Abhinavagupta have lain for many centuries. Perhaps the difficulty in gaining access to the texts may account for it. Perhaps, as an esoteric tradition, it was kept barely alive by a secretive oral tradition that jealously guarded its knowledge. No doubt Abhinavagupta's fame as an aesthetician and literary critic has tended to overshadow his contributions as a Shaiva mystic and philosopher. There can be little question that the tantric nature of the tradition caused it to be neglected in favor of more puritanical and publicly acceptable formulations of Hindu spirituality, such as those found in the Advaita Vedanta.

Even today, after some fifty years of research by a handful of excellent scholars both in India and in the West, Abhinavagupta's importance is only beginning to be recognized. A figure who is perhaps second in importance and influence only to the great Sankaracarya is barely mentioned in the standard surveys of Indian thought.

However, there have been three important foci of scholarship on the tradition that have been publishing their results during the last half-century. Before we turn to these three groups we should mention some of the earliest studies on the Shaivas of Kashmir.

Buhler, in his "Detailed Report of a Tour in Search of Sanskrit MSS"
(1877), gives a rather sketchy and faulty account of the Kashmir Shaiva tradition. Perhaps the earliest edition of a work by Abhinavagupta is of his Locana on Anandavardhana's Dhvanyaloka, which was published in Bombay in 1890 by Durgaprasad Shastri, and which contains a list of other works by Abhinavagupta in the preface.

The earliest known western study of a Kashmir Shaiva text is L. D. Barnett's edition and translation of Abhinavagupta's Paramartha-sara, which appeared in 1910. Despite the errors that naturally attend upon a work which was carried out in an almost complete scholarly vacuum, it is a still-useful English rendering of this short summary text by Abhinavagupta. In fact, it was not until Lilian Silburn published her translation of the text into French that any other scholar seriously considered this work.

Another early, though still useful, study is J. C. Chatterji's Kashmir Shaivaism (1914). Chatterji's book is divided into two sections. In the first, he attempts to set forth some historical notes and speculations about the history and dates of the tradition. In the second section he presents the theory of the thirty-six tattva-s. He gives this second section the misleading title, "The Main Doctrines of the System." The choice of words here not only implies that there is one system under consideration here, but that the theory of the thirty-six tattva-s is its main teaching. In the first section of the book Chatterji propounds an early version of a theory about the agamic origins of the Trika which has proved confusing to many scholars.

In the following pages important studies are mentioned that have been employed in the preparation of this book. This section by no means claims to be an exhaustive bibliographical reference, for which the reader is referred to the Handbook of Kashmir Shaivism, which is forthcoming in this same series.

In the last half century there have evolved essentially three foci of research on the tradition: India, France, and Italy. In India there are the activities of the pandits of the Research Department of the Kashmir government. Also of note is the most authentic modern representative of the tradition in Kashmir, Brahmacari Laksman Joo, who has inspired many students, including some westerners, to look into the tradition. Silburn lists some of Laksman Joo's publications that, unfortunately, are difficult to locate. In addition, there is K. C. Pandey's monumental study, Abhinavagupta. Pandey also produced a translation of the IPv, which is helpful for gaining access to this important text. Pandey additionally published several important articles and a book, entitled Indian Aesthetics, which deals in part with that aspect of Abhinavagupta's thought. Another early study of the tradition is contained in S. K. Das' Sakti or Divine Power, the second chapter of which contains a good summary of the non-dual
Kashmiri Shaiva doctrines. Navjivan Rastogi, a student of Pandey's, has produced a study of the Krama lineage which attempts an historical reconstruction of an almost lost lineage. Rastogi has also written articles on the Pratyabhijna, on the concept of Siva, and on the concept of Kali. Perhaps his most important contribution so far has been his work, with R. C. Dwivedi, in the republication of the Sanskrit text of the *TA* which includes a very detailed introduction as well as a number of very useful appendices. R. K. Kaw and L. N. Sharma have produced interesting books focussing mainly on aspects of the Pratyabhijna philosophy. Recently, Jaideva Singh has produced four translations which will be especially useful in introducing the general reader to the primary texts of the tradition: *Siva-sutra-s* (with Ksemaraja's *Vimarsini*), *Spanda-Karika-s* (with the *Spanda-nirnaya* of Ksemaraja), *Vijnana-bhairava*, and the *Pratyabhijna-hrdayam* of Ksemaraja. Both Singh and Sharma mention the aid they received in their work from the great scholar Gopinath Kaviraj, whose *Aspects of Indian Thought* contains much that is of interest to the scholar of non-dual Kashmiri Shaivism. J. Rudrappa has written an introductory survey, entitled *Kashmir Shaivism*, as well as several articles. Also worth mention is Jadunath Sinha's book, *Schools of Shaivism*, which has a chapter entitled *The Pratyabhijna School of Saivism*. While this work contains much useful material, it must be handled with caution, due to Sinha's rather bewildering and uncritical juxtaposition of material drawn from widely different texts of the tradition. The great Sanskrit scholar V. Raghavan has published *Abhinavagupta and His Works*, He has also edited and published the *Paryanta-pancasika* of Abhinavagupta, a translation of which forms the third chapter of Pandey's *Abhinavagupta*.82

In France, there are two scholars who have devoted decades of study and research to the tradition: Lilian Silburn and her former student, Andre Padoux. Silburn has published nine books over a quarter of a century. Already mentioned is her translation of the *Paramarthasara* (1957). In 1959 she published a translation of the *Vatulanatha Sutra*, followed by translations of the *Vijnana Bhairava* (1961), the *Stavacintamani* (1964), *Hymnes de Abhinavagupta* (1964), a translation of the *Maharthamanjari* (1968), *Hymnes aux Kali* (1975), and a translation the *Sivasutra et Vimarsini* of Ksemaraja. Recently she published *La Kundalini ou L'energie des profondeurs* (1986), a work that examines this notion in considerable detail.

These publications, all done with a strict attention to the Sanskrit and accompanied by long introductions and detailed notes, represent a wealth of information on the tradition. Silburn studied for many years with Brahmacari Laksman Joo. Silburn's writings on the practices and experiences of mysticism in the non-dual Shaivism of Kashmir strike one as being exceedingly accurate, and as imbued with the tone of the tradition itself.
Her former student, Andre Padoux, has published two books, *Recherches sur la Symbolique et L’Energie de la Parole dans Certains Textes Tantriques* (1963) and *La "Paratrisikalaghuvrtti" de Abhinavagupta* (1975). His first book, *Recherches*, is an encyclopedic work. It is perhaps the first sustained conceptual study of the tradition that has been produced. It stands as one of the first systematic and in-depth treatments of the notion of the supreme Word, *para vak*. Padoux covers the subject in such depth that he also gives full vent to the wealth of variety and detail contained in the philosophical and cosmological structures of the tradition. It is a book that combines thorough scholarliness with a lively and active sympathy for the material.

In fact, *Recherches* remains not just a pioneering study of the non-dual Shaivism of Kashmir but also stands as an important contribution to the larger field of tantric studies, and, as such, deserves to be much more widely read, studied, and emulated. Padoux’s second book is a first translation into French of the *PTIv* and contains a series of useful notes and explanations that are indispensable to any student of that text. Padoux has also published a number of important articles on mantrasastra.

In Italy, Raniero Gnoli has made important contributions to the study of non-dual Kashmir Shaivism. Gnoli has brought to bear his considerable skills as a Sanskritist, gained as a student of Giuseppe Tucci, on several of the most difficult of Abhinavagupta’s works. Perhaps his greatest achievement has been his complete translation into Italian of the *Tantraloka* (1972), which thus opens up for others this longest and most important of Abhinavagupta’s writings. Gnoli has also published complete translations of the *Tantrasara* (1960), the *PTIv* (1965), and, in his *Testi dello Scivaismo*, translations of the *Pasupatasutra*-s, the *Siva-sutra*-s, and the *Spanda-karika*-s with Kallata’s commentary. His latest contribution has been to publish a translation and critical edition of the *PTv*, a difficult and seminal text by Abhinavagupta. In addition, he has presented translations of about half of the *MVT*, which is considered by Abhinavagupta to be the most important and authoritative revealed text. He has also published translations from the *Siva-drsti* of Somananda, and selections from the *Abhinava-bharati*, as well as numerous other important articles. As a Sanskritist, Gnoli’s primary concern has been to attempt to correct and edit texts by gathering several manuscripts and checking variant readings. Thus, the present study of the *PTIv* has been aided by Gnoli’s corrections and emendations of the text published as an appendix to his Italian translation. Gnoli has been less willing than Silburn or Padoux to enter into the sustained interpretive process of the tradition, although when he does do so, as for example in his article "Alcune Technique Yoga nelle Scuole Saiva" (1956), he is highly insightful. His forte seems to be to allow the
texts to speak for themselves and to allow readers their own interpretation. Gnoli favors the view that translation is interpretation and has seen his main task to be there.  

A student of Gnoli's, Raffaele Torella, has recently published a long critique of Padoux's translation of the PTlv. His main criticism is that Padoux has not sufficiently realized the corrupt nature of the published edition of the text, and as a result, his translation has suffered. Torella points out a number of difficult passages and presents both Padoux's "mistakes" and his own suggested readings. While the tone of Torella's "correction" of Padoux is perhaps overly strong, he does clear up several very difficult passages. Torella has promised a critical edition of this important text, and this would be welcome as a much-needed aid to further studies of the P77v.

In addition to these three foci of intense research on non-dual Kashmiri Shaivism, which even in the last twenty years have opened up the field to other scholars in a way that was hardly possible before, we may also note important studies by several other scholars.

Alexis Sanderson is at present the most profound investigator of the meaning and historical relationships between the various Shaiva lineages in Kashmir. In a few compact and brilliant articles he has clarified a number of historical and interpretive questions that have long puzzled scholars. His article on the Trika lineage analyzes the various historical strata referred to by this term, which only in its latest meaning refers to Abhinavagupta's syncretism or synthesis of many different lineages into a "system." Mark Dyczkowski's book The Doctrine of Vibration provides us with a detailed analysis of the Spanda branch of the tradition.

Larson has published two excellent articles on Abhinavagupta in which he makes an appeal for the necessity for sustained interpretation and inquiry into the meaning of the tradition. Alper has published an important article in which he pleads for sustained and thoroughgoing textual scrutiny and analysis. Masson and Patwardhan's Santarasa and Abhinavagupta's Philosophy of Aesthetics presents the reader with many of the most crucial passages from several of Abhinavagupta's works on aesthetics. The great German scholar Erich Frauwallner provides an introduction to the Pratyabhijna in his Aus der Philosphie der Sivaitchen Systeme. Another excellent study in German is Bettina Baumer's "Die Unvermittelheit der Hochsten Erfahrung bei Abhinavagupta." In France, Helene Brunner has published a summary-translation of the Netra-tantra, one of the most important agama-s of the Kashmir Shaiva tradition.

The intent here has been to mention the important centers of non-dual Kashmir Shaiva research that have been slowly making it possible for other scholars to gain a better and more comprehensive picture of the
tradition. While there are a substantial number of works, much research remains to be done. Critical editions and translations need to be prepared; but beyond that, the material must be studied in order that it yield its meaning and enter its rightful place in the larger scheme of Indian religious history.
There is little doubt that Abhinavagupta was well versed in the traditional dariana-s, and that he and his predecessors were also influenced by the polemics that were prominent in Buddhist circles. The area of Kashmir traditionally was a stronghold for diverse Brahmanical and Buddhist groups.¹ Thus it is not surprising that the horizon of Abhinavagupta's "Shaiva theology" (as Alper terms it), has as important components the various "philosophies" of Vedanta, Samkhya, Patanjala Yoga, Nyaya, as well as several varieties of Buddhism, including Vaibhasika, Sautrantika, Yogacara, and Madhyamika.² It is in examining Abhinavagupta's "philosophical" writings, his "Shaiva theology," in the iPv, and the iPvv, that one most often encounters explicit or implicit argumentation directed at one or another of these schools. Also, much in non-dual Kashmir Shaivism is an expansion of doctrines borrowed or adapted from darsana or from the Buddhists. The doctrine of the thirty-six tattva-s was inherited by the tradition from earlier formulations and represents an ingenious reworking of the twenty-five tattva-s of the Samkhya. It adds an overarching cosmic dimension of Siva and his sakti-s to unify the Samkhya dualism. The doctrine of the momentariness of the abhasa-s (ksanikavada) is a direct adaptation of Buddhist notions of the impermanence of the dharma-s. Furthermore, as Alper has demonstrated, Abhinavagupta's concept of "Siva-who-is-consciousness" represents a thorough critique of the Advaita Vedanta and the santa-brahma-vadin-s.³ In addition, there are many startling parallelisms of the symbolism of the Heart with notions enunciated in the Vedic tradition.
There is another horizon to Abhinavagupta's writings which is especially important in considering the P77v, a central Kaula text. This horizon stems from several powerful streams of Shaiva religiosity itself, including the Pasupatas, the Siddhas, especially the group known as the Natha Siddhas, and the developing agamic tantric traditions whose "revealed" authoritative texts are so often quoted, especially in the TA, by Abhinavagupta.

Given the paucity of historical materials available, it is difficult to situate the non-dual Kashmir Shaiva tradition, both historically and doctrinally, within this second horizon. Indeed, an entire study could be devoted simply to outlining the problems involved in sorting out the antecedents of this complicated tradition. Until now, scholars have given more attention to situating Abhinavagupta's synthesis within the streams of Indian religiosity of the first horizon, that is, the darsanic philosophic environments, than the second horizon of Shaiva tantric environments. These two horizons are, of course, not separate, but they do roughly represent the orthodox and heterodox extremes, respectively, of the Indian traditions. In any case it is useful to examine certain environments which will be seen to bear a "family" resemblance to the Kaula portions of Abhinavagupta's writings.

**Early Developments in Shaivism**

There have been several attempts at tracing the history of Shaivism. Classic studies such as Bhandarkar's, or more recent explorations by Gonda, Jash, and Siddhantashastree, nevertheless provide only the thinnest outlines of the history of Shaivism. There are simply too many large gaps in the sequence that leads from the Mohenjo-Dara Proto-Siva through the Vedic Rudra, the Yajur Vedic Satarudriya, the Rudra-Siva of the Svetasvatara Upanisad, the astamurti and pancavaktra of the Puranic Siva, and the notions of early sectarian groups such as the Pasupatas, to the increasingly complex theologies of Siva in different agamic revelations that finally result, in one branch of the process, in the concept of Siva as taught by Abhinavagupta. What we do know of this process is that Siva, from being one in a pantheon of divinities, increasingly became the focus of sectarian groups who worshipped him exclusively. This lengthy process of historical development, and the antecedent history of Shaivism that leads to Abhinavagupta and continues beyond him, is extremely complex. The theological intricacies, the density of ritual, and the yogic and tantric complexities of non-dual Kashmiri Shaivism are the result of long centuries of evolution. Unfortunately, we know very little about these centuries.

Jash proposes a classification of these early groups by ordering them
into: (I) the Siddhanta School, by which he means the ordinary Shaivas who followed the Puranic doctrine; (2) the Agamic Shaivas, which includes (a) the Tamil Shaivas, (b) the Lingayats or Virasaivas, and (c) the Kashmir Shaivas; (3) the Pasupatas, which include two subgroups (a) the Kapalikas and (b) the Kalamukhas. This classification is useful as long as it is applied with caution. The use of the term Siddhanta could cause some confusion, as southern, Tamil Shaivism has come to be known as Saiva Siddhanta. This is clearly not what Jash intends, since the Tamil Shaivas are mentioned in the second category. There is more to this complication. Southern Shaivism, which Jash refers to as "Tamil Shaivas," is in fact two traditions, one Sanskrit and one Tamil. Brunner-Lachaux suggests that the Sanskrit tradition be called the Suddhasaivas, or even more simply, the Saivas, and that the term Saivasiddhanta be reserved for the later parallel, but independent, school based on Tamil texts. This solution is acceptable except that, as Pandey demonstrates, the terms Saiva, Saiva Siddhanta and Suddha Saiva are often used synonymously to refer to the dualistic Sanskrit tradition. Lorenzen offers another cautionary note in showing that the Kapalikas and Kalamukhas are not really subsects of the Pasupatas, but rather are "separate, though closely allied, Saivite sects." Finally, although the Virasaivas appear in this list, it should be noted that they do not belong to the early period preceding Abhinavagupta; instead, they begin to develop around the twelfth century. As can be seen, there has been a great deal of confusion and lack of agreement as to how these terms are to be employed and, more importantly, about the historical relationships between the groups they denote.

It is also clear that followers of Siva not affiliated with any specific school or tradition of practice continue to this day. Within this heterogeneous mass, various forms have coalesced from time to time into actual groups, sects, and movements. In tracing the appearance of various Shaiva groups, we do not encounter a linear, evolutionary progression that in any direct way leads to non-dual Kashmiri Shaivism. Yet it can be argued that the PThy and other Kaula and tantric materials in Abhinavagupta's writings are authentic manifestations of the spirit of Shaivism. This Shaivite heritage becomes apparent when we examine the early Shaiva groups who exhibited powerful tendencies toward a religious practice that is yogic and tantric in character. It is in these early environments that the ideas and practices enunciated in the Kaula lineage must have first evolved.

An early example of this yogic tendency appears in the Svetasvatara Upanisad, which is traced to the fifth or sixth centuries B.C.E. Here the central teaching is of Rudra-Siva as the Supreme Being, the great Self, seated in the Heart of creatures. To know him is to become immortal. To achieve this end a series of yogic and meditative practices are prescribed, such
as holding the body steady and then causing the senses and the mind to enter into the Heart. The subtle breath is to be controlled. As a result of these practices, the text tells us, the yogin will see the preliminary forms of brahman: fog, smoke, sun, wind, fire, fireflies, lightning, and a crystal moon. When the yogin has acquired a body made of the fire of Yoga, he is no longer subject to sickness, old age, or death. These instructions offer an early expression of a constant Shaivite theme: the yogic process should lead not just to an inner enlightenment, but also to a physiological transformation by which the body itself is led to enlightenment, to immortality.

In the Mahabharata, we encounter for the first time a Siva who is more personal than the rather abstract figure of the Svetasvatara Upanisad. Dwelling in the Himalayas with his wife, Uma, he is the divine yogin who practices great austerities and yet whose symbol is the linga, a complex symbol that in one of its meanings represents the powerful sexuality of the God. O'Flaherty has engaged in an intricate study of this paradoxical god as he appears in the Great Epic and in the Puranic materials. She comments that the wide applicability of the recurrent supplementary themes from the Puranic corpus is evident from the role that they play in one of the enduring problems of Hindu mythology, the paradox of Siva the erotic ascetic. This problem has often been noted and by now is sometimes accepted as a matter of fact; the great ascetic is the god of the phallus (the linga). The meaning of this paradox has never been properly explored.

O'Flaherty argues that though this central paradox of Shaiva mythology can never be resolved, the figure of Siva can act as a mediating principle between the contradictions and oppositions involved. As she suggests, the mediating principle that tends to resolve the contradictions is in most cases Siva himself. Among ascetics he is a libertine and among libertines an ascetic; conflicts which they cannot resolve, or can attempt to resolve only by compromise, he simply absorbs into himself and expresses in terms of other conflicts. Where there is excess, he opposes and controls it; where there is no action, he himself becomes excessively active. He emphasizes the aspect of himself which is unexpected, inappropriate, shattering any attempt to achieve superficial reconciliation of the conflict through mere logical compromise. . . . The erotic ascetic is precisely such an "abnormal" and "anomalous" figure. Siva is particularly able to mediate in this way because of his protean character; he is all things to all men. He merely brings to a head the extreme and therefore the least reconcilable aspects of the oppositions which, although they may be resolved in various ways on the divine level, are almost never reconciled on the human level.
While Abhinavagupta's Siva is much less "mythological" in character than the Puranic Siva, O'Flaherty's suggestive words are still quite applicable to it. For the non-dual Kashmiri Shaivas, Siva, who is identified with the supreme consciousness, performs a different, though equally important, mediating function. In his omnipresence, he is to be found at the intersection or junction point between any two states of awareness, no matter how opposed. As a result of Siva's unboundedness, any attempt to pin him down theologically results in his manifesting himself as the opposite quality as well. Because of this unpredictability, there is an unexpectedness, a continual surprise, even an astonishment, in the experience of the yogin as he approaches Siva through the different levels of Yoga.19

Indeed, it is precisely in this pursuit of tantric Yoga that Hinduism is able to achieve a reconciliation of the usually opposed goals of enjoyment (bhoga) and liberation (moksa). This reconciliation becomes one of the hallmarks of the tantric tradition. Yet O'Flaherty resists any attempt, such as those made by Bharati, to see in the tantra-s the origin of the puranic Siva:

The Tantric element in medieval Saiva mythology is undeniable, but it is false to seek the origins of Siva's sexual ambiguity in this comparatively late development. The ithyphallic condition has been attributed by some not to priapism but to the Tantric ritual of seminal retention. To a certain extent, this technique may be considered a manifestation of yogic chastity, but Siva's raised linga is symbolic of the power to spill the seed as well as to retain it.20

This is an interesting comment. Rather than see in the tantra-s the origin of the Shaiva symbolism of the linga, it might be argued that Tantric schools naturally arose in Shaiva environments precisely because of this affinity of symbolism. Of course, some scholars locate the origins of the Tantra elsewhere, especially in Buddhism. We shall not approach this question here. It is perhaps an ultimately insoluble historical problem.21 There are also certain Shaiva schools that did not condone some of the more extreme "left-handed" tantric practices.22 However, the fact remains that Shaivism was the most congenial environment for the developing tantric traditions.23 In these tantric groups, the linga, while retaining its primary emblematic identification with the procreative organ of the male, takes on additional esoteric connotations. Certainly, the notion of the urdhvaretas, one whose seed is raised up, describes a technical condition of chastity. As O'Flaherty comments, "by synecdoche, the seed is often confused with the linga itself, which is 'raised' in chastity."24 The "yogic" effect of this elevation is homologized with the rising kundalini, which ascends through the erect spine of the meditative yogin and spills itself
out into the skull in the form of the nectar of immortality, *soma*. This "inner" ejaculation and orgasm, which results from the culmination of the *yogin*-s union with Siva, will be discussed in a later chapter. Its significance in this context is that while "external" sexual rituals were carried out in the Tantra, sexual symbolism need not be limited to the discussion of the sexual ritual. Rather, it may simply be a language for discussing extraordinary spiritual phenomena.

In a powerful study of the Shaiva myth cycle, Stella Kramrisch emphasizes a holistic, interpretive approach.

The myths of Siva have many levels. They have to be entered all at the same time, or else the total, multiple perspective of each is lost sight of. Crazed beggar, savior, necrophiliac, voluptuary, ascetic, he is each wholly on the plane where he acts, while on another plane he is Sadasiva, the eternal Siva, who lays out his presence in his five faces, of which the fifth, invisible in principle, is part of the *pancamukha linga*, Siva's concrete, monumental symbol.

Kramrisch repeatedly highlights the cosmic perspective of the primordial acts that bring about "creation." Here is her description of an early myth fragment:

The Father had broken the state of wholeness that existed before the fall of the seed. This state is beyond words. It is indescribable and inaccessible to the senses. It is "neither nonbeing nor being" (RV. 10.129.1). But if that much can be said about it, it has also been said that it is "nonbeing and being" (RV. 10.5.7), and that out of nonbeing came being in the first age of the god (RV.10.72.2). It is then that the indefinable wholeness of the total absence or the total presence of both nonbeing and being appears to recede and to set up the screen on which are seen the large figures of gods and their actions. This state of "neither non-being nor being," or simultaneously "nonbeing and being" is not within the range of thought. It is a plenum that defies definition, for it has no limits. Yet it is not a chaos, the "darkness covered by darkness," said to have existed before the beginning of the ordered universe (RV. 10.129.3). In its precosmic, pre-conscious totality, everything is contained, including consciousness and nothingness. Metaphysically, it did not cease when the cosmos came into existence, for it is not subject to time. Mythically, its wholeness has been injured. Mystically, its nameless plenum is inaccessible except in the state of *samadhi*, the final stage of yoga leading to *moksa*, the total release from all contingencies. Words like plenum, totality, and wholeness are used here merely as symbols of the Uncreate. Rudra, the guardian of the Uncreate, an undefinable transcendent plenum, avenged the infringement of that wholeness.

This remarkable analysis refuses to sunder the "philosophical" and mythological dimensions of Shaivism. A similarly unified perspective characterizes Abhinavagupta’s formulations.
Gonda emphasizes the importance in puranic Shaivism of the two doctrines of the five faces (pancavaktra) and the eight embodiments (astamurti) of Siva. The five faces are named Isana, Tatpurusa, Aghora, Vanamadeva and Sadyojata. These faces appear also in the P77v where they are termed the "pentad of brahman" (brahmapancaka). The eight embodiments are composed of the traditional five elements, to which are added the sun, moon, and the sacrificer, and each of these is given one of the traditional names of Siva. Our interest here is not in the details of these two doctrines, which are actually rather complex. Rather it is useful to emphasize one aspect of their meaning. Gonda puts it quite well when he says:

This doctrine of the five manifestations of Siva, who according to his worshippers is first and foremost the Great Lord, expresses the belief that he is the All, the Highest and the Unique who embraces and comprises the universe and all beings and of whom they are composed.... It emphasizes ... God's identity with the universe and the universe's identity with God who is omnipresent and manifests Himself and His activity always and everywhere. It is, to conclude with, sufficiently clear that Sivaite speculation, utilizing elements of an ancient cosmological myth and guided by the influential Samkhya theory of the evolution of the world and the cosmic processes, had remodelled the ancient idea of God's eight aspects distributed over the whole universe into a system of His eightfold manifestation, presence and activity which at the same time expressed the fundamental truth that God and the world are one.

In our final chapter, we will see that this search for "oneness" leads to very sophisticated formulations, especially in the concept of samputikarana, the "englobing" of consciousness.

It is not out of place to underscore the connection of Siva with the numbers five and three, which Kramrisch has called Siva's "sacred numbers." Larson has shown the importance of numerical connections in the Samkhya, which Gonda mentions as one of the possible sources for these doctrines. We will see later on the centrality of three in the Trika, especially in relation to Siva, as well as the importance of jive in the Krama lineage and elsewhere, particularly in relation to the Saktt'-s. These two "add up" to the wholeness of eight.

Pasupatas

The earliest Shaiva sectarian group is known as the Pasupatas. The school's reputed founder, Lakulisa, the Lord Who Bears A Club, who is also known as Nakulisa, probably lived around the first half of the second century C.E. Most scholars attribute the Pasupata-sutra-s
to him. A commentary on these sutra-s, the Pancartha-bhasya, was written by Kaundinya sometime around 500 c.E. There, Kaundinya explains the five topics of the Pasupata doctrine, which include (1) karya (effect), (2) karana (cause), (3) yoga (meditation), (4) vidhi (practices), and (5) duhkhanta (end of sorrows). The importance of this school is that its followers develop an intense form of asceticism in order to gain union with Siva (rudrasayujya). This union is accompanied by the production and display of supernormal powers of all kinds, including omniscience and even immortality. Ascetics of this school intentionally court disrepute by all sorts of mad, incoherent, and disreputable behavior. The explicit justification is that these bizarre actions purge their sins and gain the ascetics the merit of those who abuse them. In fact, this is an instance of imitation of Siva by behavior that is unexpected and inappropriate. The only "yogic" practice mentioned in the Pasupata-sutra-s is, interestingly, the meditation in the Heart. Sutra 5.25 reads, "one should perform meditation in the Heart" (hrdi kurvita dharanam). In the commentary, we are told that the Heart is synonymous with the atman. Abhinavagupta, who, as we shall see, expounds a fully developed Shaivite Heart doctrine, mentions Nakulesa in the TA as an authority whose teachings he accepts.

The Kapalikas and the Kalamukhas are two closely related sects about whom our information is limited. There is no direct textual basis for any knowledge of their doctrines or practices. Rather, we are left with the often negative and almost certainly prejudiced views of their opponents and detractors, who describe the activities, particularly of the Kapalikas, the Skull-bearers, in especially outraged terms. Lorenzen's excellent study attempts to reconstruct the activities and beliefs of these two groups. In addition to the contemporary scandalized reports about the Kapalikas, he uses a number of inscriptions that are scattered across India. His conclusions are that the Kapalikas were indeed a tantric group of outrageous, wandering ascetics, of which at least one wing indulged in extreme and even ghoulish practices. The evidence suggests that the group was extant beginning as early as the first century c.E., but perhaps as late as the fifth century.

Lorenzen offers us a passage from Ramanuja which discusses the main features of the Kapalika worship:

As the Kapalas declare: "He who knows the essence of the six insignia (mudrika-satka), who is proficient in the highest mudra, and who meditates on the Self as seated in the vulva (bhagasana-stha), attains nirvana." They define the six insignia (mudra) as the kanthika (necklace), the rucaka (another neck ornament), the kundala (earring), the Sikhamani (crest-jewel), ashes, and the sacred thread. A person bearing these insignia is not born again in this world.
Lorenzen continues by noting that "they have two secondary insignia (upamudra) - the skull (kapala), and the club - (khatvanga)." Although the above passage is a late one, the picture that emerges is of a typically tantric group, related perhaps to the Kanphata yogin-s and to the Natha Siddhas.

In contrast, when Lorenzen treats the Kalamukhas, he argues (against Bhandarkar) that the Kalamukhas (bearing a black stripe on the face?) were a group more directly related to the Pasupatas, who practiced various forms of asceticism but not the extreme tantric practices of the Kapalikas. He provides evidence to support the theory that the Kalamukhas originated in Kashmir, and by the end of the eighth century began to migrate south, becoming an extremely important sect in tenth-to-thirteenth-century Mysore.

Unfortunately, no texts describing this group's beliefs and rituals have survived, and the little we know about them is derived from temple inscriptions. From the scanty information of these two groups and our knowledge of the Pasupatas, we can conclude that early on within Shaiva circles, groups of ascetics were undertaking various forms of yogic practices, some of which may have been based on the powerful idea that enlightenment or union with Rudra must be fearlessly pursued with whatever means are at one's disposal. These practitioners may have included some who specialized in a kind of defiant assault on conventional morality. The religious ideal of these wandering ascetics is probably best instantiated in the figure of Siva, personified as the naked, priapic, wandering yogin who haunts cemeteries and other fearful places. Here Siva is seen as a fearful and powerful figure: covered with ashes, performing frightful austerities, he stands outside the safe fold of the varnasrama dharma and challenges its virtuous but unenlightened followers.

Later, more sophisticated formulations, such as those of Abhinavagupta, argue that spiritual ignorance is precisely the attachment to polarities of good and evil, purity and impurity, right and wrong, and life and death. It is precisely the attachment to these polarities that constitutes conventional morality. The ascetic confronts his own and others' ignorance by challenging, among other things, the prevailing conventional morality of society. The result may be, of course, that the ascetic is, in turn, almost certainly misunderstood, if not reviled, by the society from which he separates himself in the search for Siva.

There are many Shaivite myths connected with the symbolism of the search for immortality. A central myth involves the churning of the ocean to obtain the ambrosia of immortality. Although this has been interpreted by some scholars as a creation myth, the image more deeply signifies yogic processes involving the journey of return to the source from which
creation emerges. As the story is told in the *Mahabharata*, the gods and demons churn the ocean in tug-of-war fashion using the Mount Mandara as a churning stick and the serpent Vasuki as a cord. As they churn the ocean various things begin to emerge: the moon, the goddess Sri, the white horse of the sun, the *kaustubha* gem, and the great elephant, Airavata. As they continue to churn, evil, demonic things also emerge; most threatening is the terrible poison, *kalakuta*, which paralyzes the three worlds with its dreadful fumes. Siva comes to the rescue by drinking and holding the poison in his throat, which turns blue as a result. A magic, wish-granting tree and cow then emerge from the ocean, and the god Dhanvantari comes forth holding a white pot of ambrosia. Visnu gives the ambrosia of immortality to the gods to drink and tricks the demons into giving up their share. When the demons realize that they have been deceived a terrible battle ensues, from which the gods finally emerge victorious.

This myth may be interpreted on many levels. In yogic and tantric circles, the myth refers to internal spiritual and bodily processes in which the ocean of consciousness is 'churned' using the 'serpent', *kundalini*. The end result is that the gods, who here are the equivalents of the tantric yogin's positive internal forces, become immortalized by the drinking of the nectar of ambrosia that finally emerges from the 'ocean'. During the process many phenomena, both dazzling and attractive as well as negative and poisonous, will also emerge, and these may cause the yogin to deviate from the process of Yoga and hence impede his progress toward the nectar.

Another important element of the myth is that both the positive and negative elements, the gods and the demons, must cooperate in a rhythmic fashion for the 'churning' to be successful. The sun and moon play a prominent role in this myth, and the moon is identified with the Vedic *soma*, the elixir of immortality. As we shall see later on, the sun and moon take on important esoteric meanings related to the internal process of generating immortality. The moon is divided into sixteen parts of which the sixteenth is said to be the immortal underlying essence of the ever-waxing and waning moon.

The form of Siva most often encountered in the non-dual Kashmir Shaiva texts is called Bhairava. Representations of this god show a form of dread and terror. A sinister fanged face often surmounted by writhing serpents conveys the fury of the god of death, who is also the god of regeneration and renewal. Bhairava is the interlocutor in the P77v, the god who teaches the Bhagavati the secrets of liberation. This god's importance to the tradition is also seen in his appearance in the title of several *tantra*-s, including the influential *Vijnana-bhairava*. The term
THE HISTORICAL CONTEXT

Bhairava derives from the root *bhl*, to be afraid, and the related adjective *bhira*, fearful, timid. By a process of inversion Bhairava comes to mean frightful, terrible, horrible.

O'Flaherty recounts a central myth in the tradition: the beheading of Brahma by Siva. We have already seen that Siva is said to have five faces or heads. In this myth, the god Brahma also has five faces or five heads. Siva, in the form of Bhairava, cuts off one of these with the tip of the nail of his left thumb. Because he is now guilty of the sin of Brahminicide, Bhairava is condemned to wander, begging for alms and carrying Brahma's skull. Lorenzen elucidates the compelling parallels between this myth and the *mahavrata* vow for the removal of sin for accidentally killing a *brahmana*, as well as the relation of both to the Kapalikas.

An important aspect of this ritual communion with Siva-Kapalin seems to have been the identification of the devotee's begging skull with the skull of Brahma. As their name indicates, this skull bowl was the Kapalika trademark. In the *Prabhodacandrodaya*, the Kapalika describes himself as one who "eats from a human skull" and says that "the conclusion of our fast (is accomplished) by drinking liquor distributed in the skull of a Brahman."

Eliade has commented on what he terms the "symbolical confusionism" involved in "forgetting" the yogic meanings involved in the "corpse," the "skeleton," the "cemetery," and "drinking from a skull."

The process may be imagined as follows. (1) An archaic ideology, connected with a particular lunar symbolism, implied, among other things, human sacrifice and skull hunting; populations holding these ideas were, during the historical period, settled in zones bordering on Hinduism. (2) On the level of the highest Indian spirituality, the cemetery, corpses, and skeletons were revalorized and incorporated into an ascetico-mystical symbolism; to meditate seated on a corpse, to wear a skull, etc., now represented spiritual exercises that pursued a wholly different order of values from those, let us say, of the head-hunters. (3) When the two ideologies come into contact ... we witness a phenomenon of pseudomorphism and devalorization. In this light, we can understand how one or another tantric yoga becomes licentious;... we also understand why a particular Kapalin forgets the yogic meaning of the "corpses" and the "skeleton" and becomes a head-hunter. Above all, these reciprocal degradations and devalorizations are explained by "symbolical confusionism," by a symbolism being forgotten or inadequately comprehended.

These remarks are important for understanding an ongoing process of misinterpretation that has taken place in both tantric and yogic circles. We shall see that Abhinavagupta continuously emphasizes an interpretation
of tantric symbolism in terms of the inner phenomena of consciousness. For example, he relates the symbolism involved in "drinking from the skull" to the "drinking of soma" associated with the inner ascent of the kundalini. This emphasis on internal interpretation is not to say that certain external rituals did not form a valid, though probably much less central, part of tantric practice.

In addition to the Kapalikas and the Kalamukhas, another imperfectly known group appears within Shaiva circles in these early centuries which is known as the Siddhas or Perfected Ones. Of particular interest is a subgroup of these Siddhas known as the Natha Siddhas. Lorenzen notes the connection between the Kapalikas and the Natha Siddhas, also known as the Kanphatas (Split-Ears), or Gorakhnathis (from the name of their reputed founder, Goraksa-natha), tradition." He points out that the Goraksa-siddhanta-samgraha states that:

Indeed, some people believe that these (Siddhas) hold the Kapalika doctrine on account of the mention of the devotion of the Kapalika, but that is not actually (the case). Our doctrine is beyond all worldly ties (avadhuta). Nonetheless, the Kapalika doctrine was also revealed by Natha (Siva). Natha was the revealer of this path."

This comment establishes a link that leads from the Kapalikas, themselves indirectly related to the Pasupatas, to the Natha Siddhas. Later on we shall see that another link joins the Natha Siddhas to the Kaula lineage. Thus there are a series of linked traditions, which, though not identical in content or practice, do provide a line of continuity in Shaiva practice that passes right through the center of the non-dual Kashmir Shaiva tradition.

Many of the texts of the Hatha Yoga are attributed to Goraksanatha. Again, many of these texts are quite late, perhaps contemporary with Abhinavagupta or even later. The figure of Goraksanatha and that of his teacher Matsyendranatha are obscured by many levels of legend. Two excellent studies which attempt to clarify the tradition have been produced: Briggs' extremely informative book, Goraknath and the Kanphata Yogiś, and S. B. Dasgupta's Obscure Religious Cults. Despite this scholarly attention, much work remains to be done in sorting out these early, popular, yogic movements.

This early yogic movement was connected with even earlier alchemical formulations as well as with the subsequent elaboration of these alchemical processes into a process known as kaya-sadhana - the "perfecting" of the body. As Dasgupta says,

The Nath cult seems to represent a particular phase of the Siddha cult of India.
This Siddha cult is a very old religious cult with its main emphasis on a psycho-chemical process of yoga, known as the *kaya-sadhana* or the culture of the body with a view to making it perfect and immutable and thereby attaining immortal spiritual life. To escape death ... was the central point round which grew the details of the Siddha cult, and the Siddhas in general hold "that death may either be put off *ab libitum* by a special course of restrengthening and revitalizing the body so as to put it permanently *en rapport* with the world of sense, or to be ended definitively by dematerializing and spiritualizing the body, according to prescription, so that it disappears in time in a celestial form from the world of sense, and finds its permanent abode in the transcendental glory of God." This Siddha school seems to be closely associated with the Indian school of *Rasayana* and it is sometimes held that the Siddha school was originally based on the theories and practices of the *Rasayana* school.\(^6\)

The aim of the Natha Siddhas was certainly to achieve the condition known as *jivan-mukti*, or liberation while still alive. This condition of freedom then led to the further goal of *para-mukti*, in which the liberated one is 'immortalized' in a perfected body that, in some respects, makes him an embodied Siva. Here, union with Siva comes to mean truly embodying Siva, with full possession of all of his powers and abilities. The goal is not a resolution or release of a finite soul into an ultimate source or essence. Rather, what is sought is much more daring and ambitious. The *siddha* wishes to stem the current that usually leads to death, by means of the *ultra-sadhana*, the regressive process. Says Dasgupta:

> The yoga practices of the Nath Siddhas is *Ulta* or regressive, firstly in the sense that it involves yogic processes which give a regressive or upward motion to the whole biological as well as psychological systems which in their ordinary nature possess a downward tendency; and in the sense that such yogic practices lead the Siddha to his original ultimate nature as the immortal *Being* in his perfect or divine body."

This regressive process involves a practice of introverting the mind, of turning the mind away from its outward course in which it is directed towards the external sensory world. It also involves a parallel process of arresting the vital breath so that it turns back from its ordinary respiratory flow. Finally, both of these processes are linked to a "regression" of the sexual energy and sexual secretion, which are redirected from their usual outward flow in the ordinary sexual act. Instead, they are elevated and transmuted as the *maha-rasa*, or "great essence." This essence trickles from the 'moon' in the *saahasrara*, or thousand-petalled lotus. A technique known as the *khecari-mudra* is employed to save the immortalizing essence from falling into the 'sun' in the navel, also known as the *kalagni*, the
While the details of this fascinating process cannot be explored here, it can at least be mentioned that the khecari-mudra forms an important part of Abhinavagupta's *PTlv*. In his commentary, Abhinavagupta hints at an "immortalizing" process that spreads outwards from the Heart into the body. This process must be understood in terms of its connection with the esoteric yogic processes just described. No doubt, this subject is liable to great misinterpretation. In this respect, it is especially relevant to note that the Nātha Siddhas were uncompromisingly celibate. Their celibacy is not surprising, given the importance of transmuting rather than spending the sexual essence. Yet it is clear that many of the yogic and tantric groups who inherited these ideas also engaged in some form of sexual ritual (as opposed to the sexual symbolism of the union of Siva and sakti, for example, which even the Nātha Siddhas employ). The complications inherent in this apparent (and very Shaivite) incongruity will be discussed later on. The important point is simply that the ideas propounded by the Nātha Siddhas form the core teaching of many yogic, tantric, Shaivite formulations. It is unfortunate that no early, detailed texts explaining these practices have survived:

The religious views of the Nātha Siddhas are as much obscured by the insufficiency and anomaly of accounts as is the history of the whole cult. The distinctive features of their yogic practices as also the theories behind them are not found explained systematically in any of the Sanskrit or non-Sanskrit texts, associated with the cult somehow or other. The Sanskrit texts are mainly texts on Hatha-yoga in general and the vernacular texts are mainly poetical texts on legends and myths. Abhinavagupta's writings are of crucial importance as the first serious exposition of the tantric yoga theories that have survived into our hands.

**Agama-s and Saivasiddhanta**

Perhaps the most important textual sources for the non-dual Kashmir Shaiva tradition are the body of scripture known collectively as the *agama-s*. These texts, which were considered as authoritative, and even "revealed" scripture, began to appear perhaps as early as the fourth century, but probably certainly by the seventh or eighth century. Many of the *agama-s* cited by Abhinavagupta have been lost, and of the very large *agama* literature that survives, very little has been critically edited, translated, or studied. Yet these are exceedingly important texts. According to Gonda,
The Sivaite agama-s are not only by far our main source of knowledge of the older phases of Sivaite religious practice and the interrelations between Southern and Kashmirian Sivaism, they give also very welcome information on the history of Indian religion and philosophy in general. They served as the doctrinal basis of Sivaite monasticism and as the fundamental manuals for liturgies and religious practices. They are also of special importance for the history of Hindu art.... In short, they prove to be an indispensable mine of information on various aspects of Hinduism.\textsuperscript{65}

The subject matter of these texts is traditionally and perhaps stereotypically divided into four sections, or quarters (\textit{pada}). The ideal structure involves one section devoted to higher knowledge (\textit{Jnana}), which leads to ultimate freedom and enlightenment. Another section would treat the practices and techniques (\textit{yoga}) employed to achieve that ultimate freedom. A third section would deal with all ritual action (\textit{kriya}) regarding the place of worship, while the fourth would describe the proper mode of behavior (\textit{carya}) in the performance of daily worship and other rituals.\textsuperscript{66} This traditional division, however, more often remains a theoretical model rather than a representation of the actual structure of these texts.

There is also a certain looseness in the traditional use of the term \textit{agama}. It comes to be applied generally to any authoritative and revealed text. In time, the teachings of these agama-s supersede the ancient Vedic rites. The teachings of the agama-s also embody several religious traditions. Gonda notes that "Visnuite texts of this category are often called \textit{samhita}"\textsuperscript{67} Worshippers of the Goddess (Saktas) often refer to their sacred texts as \textit{tantra-s}. Finally, worshippers of Siva refer most often to their sacred texts as \textit{agamas} (or \textit{Saiva agamas}). However, these are not hard-and-fast terminological distinctions. For example, one often sees the phrase \textit{sakta agamas}. Consequently, the employment of the terms \textit{tantra, agama,} or \textit{samhita} in the title of a text is certainly not enough to establish its doctrinal provenance. Addressing himself to this problem Alper says:

If a distinction between \textit{agama} and \textit{tantra} makes any sense, it makes very rough social sense, or perhaps "geo-religious," sense: what in the Northern two thirds of India have come to be called \textit{the} Tantras, tend in South India to be known as \textit{the} Agamas. Although it suggests an unrealistic division between North and South India, I shall follow the convention established in the HIL. Under \textit{agama}, I shall refer largely to the \textit{Saivagamas} and the Pancaratra \textit{samhitas} preserved in the South; under \textit{Tantra} I shall refer largely to the parallel literature preserved in the North.\textsuperscript{68}

An excellent example appears in the TA where Abhinavagupta mentions as authoritative both \textit{agama-s} and \textit{tantra-s}.\textsuperscript{69} Important \textit{agama-s}
cited by Abhinavagupta include the Kamika, Kirana, Nihsvasa, Pauskara, Raurava, Svayambhuva, Paramesvara, and others. These texts place great emphasis on the reception of a sacred mantra as the central moment of the initiation (diksa) that enables one to arrive at Siva.

Equally influential texts mentioned by Abhinavagupta, however, include the following tantra-s: the Paratrisika, the Nirmaryada-tantra, Kalikula-tantra, the Urmimaha-tantra, Ratnamala-tantra, Trisiro-bhairava-tantra, Nisisamcara-tantra, Devyamala-tantra, the Siddha-yogesvari-mata-tantra, Vijnana-bhairava-tantra, Svachchanda-tantra, Mrtyunjaya-tantra, Matanga-tantra, and the Malini-vijaya-tantra. Of these, the Malini-vijaya-tantra is considered by Abhinavagupta to be the most important and influential tantra.

These texts often contain a tantric, and indeed, a saktic tendency. In many of them, the ancient lineage of the Siddhas seems to continue directly into the teachings of the Kaula-s. The texts place a great emphasis on the importance of the Goddess and her worship, which is carried out by the initiated in-group.

Although the agama-s are, as a whole, anonymous, two early teachers in Kashmir who contributed much to their coherent interpretation were Brhaspati and Sadyojyotih. They probably lived sometime between the seventh and ninth centuries, and their teaching is known as the Saiva-siddhanta, the Established Truth of Shaivism. The complications arising from this term’s use with respect to the Tamil Shaiva tradition of later times have already been mentioned. However, the fact remains that Abhinavagupta knew of and criticized a dualistic Shaiva tradition in Kashmir known as Siddhanta. In fact, one of Abhinavagupta’s major purposes in writing the TA was to expound the teachings of the agama-s, which, in their "proper" interpretation, he revered in common with all Shaivas.

The Southern Shaiva tradition, in both its Tamil and Sanskrit branches, flourished in the centuries after Abhinavagupta, from about the eleventh to the thirteenth centuries. The complex relationships and interactions between Northern and Southern Shaivism need much further exploration. The research that is presently emerging suggests that despite important doctrinal differences, there was much greater ritual and textual continuity than has been previously suspected. It would be patently incorrect, however, to think that Southern Shaivism, because it is apparently later, somehow derives directly from Northern Shaivism, which would then in some way be more authentic. It is perhaps most useful to think of one pan-Indian Saivagamic tradition within which these distinctions between Northern and Southern are somewhat false. The development of the Southern
The historical context is further complicated in that it involves the melding of two different cultural traditions, the Tamil and the Sanskrit.

The Southern Sanskrit tradition of Saiva Siddhanta finds its roots in the expositions of Sadyojyotih and Brhaspati, and later on in the expositions of Bhojadeva, Ramakantha, and many others. In addition, it finds expression in important ritual texts such as the *Soma-Sambhu-paddhati*. With the same background of the *Saivagamas* ever present, the Tamil tradition can be traced to the early Shaivite hymnodists known as the NayaNars. The *Tirumandiram* of Tirumular (sixth century) is the earliest exposition of the school, which was given a definitive form in the thirteenth century by Meykandar in his *Siva-jnana-bodham*. In an authoritative study of the school, K. Sivaraman summarizes the central doctrines:

As pluralistic in the sense of being non-absolutistic, Saiva Siddhanta conceives reality in three ultimate, irreducible modes - *pati*, the Lord (God); *pasu*, the bound soul (self); *pasa*, the bond (world). The three are not mere appearances, distinctions set up and held apart in the whole that is reality. They are modes of reality distinct and primordial. It is not possible to derive one from another and much less all the three from a whole or unity. The alternative to a philosophy of one real seems to be a philosophy of three reals.

Indeed, the Saiva Siddhanta shares many of its doctrinal categories with the non-dual Kashmir Shaivas. In many cases, however, there are subtle reinterpretations of meaning. The final aim of the school is to achieve *sayujya* - union with God. As T. M. P. Mahadevan comments.

The soul's attainment of *Sivatva* does not mean its mergence of its being in Siva. The entitative difference of the soul from Siva is maintained even in *moksa*. The *jiva* can claim God's nature as its own too, but not that it itself is God. The difference between bondage and release is this; while in the former the soul's experience is through *pasa* (bond), in the latter it is through *pati* (i.e. Lord) — There is also this difference between the released soul and God. While the soul is now free from *mala* and enjoys the bliss of *Siva*, it does not share with the latter His five functions. ... *Moksa* thus is not a state of bare identity; it is the experience of unity-in-duality.

It will be apparent later on that the non-dual Kashmir Shaiva tradition does teach a state of identity with *Siva* as constituting its highest goal. We should turn now to the historical origins and development of the non-dual Kashmir Shaivas in the centuries preceding Abhinavagupta.
Non-Dual Shaivism of Kashmir

The foundations of the tradition are firmly rooted in the agama sastra which we have just discussed. Various lists of these texts come down to us; we have already mentioned that Abhinavagupta considered the Malini-vijaya-tantra as the most authoritative. The list of eleven tamra-s usually includes the Svachchanda, the Vijnana-bhairava, the Ucchusma-bhairava, the Ananda-bhairava, the Mrgendra, Matanga, Netra, Naisvasa, Svayambhuva, and Rudra-yamala. The so-called Paratrimsika verses commented on by Abhinavagupta in his PTv and PTIv are said to form the last part of the the Rudra-yamala-tantra. Some scholars argue, however, that this latter text, the Rudra-yamala-tantra, was merely a "convenience" title and that no such text ever existed. Goudriaan demonstrates that while there are two separate published texts which link themselves to the RYT, an Uttara-tantra and an Anuttara-tantra, neither text is linked to the verses commented on in the PTv and PTIv. There are as many as fifty other texts which claim to derive from this mysterious tantra of which perhaps the earliest are precisely the Paratrimsika verses and the Vijnana-bhairava. It is significant that Abhinavagupta refers to the Paratrimsika as the Trika-sutra because it expounds the fundamental teachings of the Trika, that is, the non-dual Kashmir Shaiva tradition.

Of these texts, the Svachchanda-tantra is a massive text (comprising six volumes in the Kashmir Series of Texts and Studies) which is commented on by Ksemaraja. The emphasis of the text is on ritual, yogic techniques, mantra-s, prana, and the enunciation of the mantra OM, which is divided into twelve stages. Unfortunately, no translation of the text has yet been published. Connected with this text is the Nerra-tantra, also known as the Mrtyujit, for which Ksemaraja also wrote a commentary. A summary of this text has been published by Brunner. The main theme of the book is a form of Siva known as the Eye (Netra), or the Conqueror of Death (Mrtyunjaya), or the Lord of Immortality (Amrtega). It teaches a mantra, known by these same names: Om JUM SAH. The text abounds with descriptions of techniques for the use of mantra-s, magical procedures, lists of divinities, names of schools, and so on. Both of these texts are cited by Abhinavagupta in the TA, and it can be assumed that Ksemaraja's commentary on them reflects, as do all of his comments, his understanding of his master's teachings.

The Vijnana-bhairava is a work of great importance. Abhinavagupta's respect for it is evidenced in his having termed it Siva-vijnana-upanisad, "the Esoteric Teaching for the Direct Knowledge of Siva." Although it is a relatively brief text of 163 stanzas, each of its verses represents a
THE HISTORICAL CONTEXT

compressed description of a particular meditation method (bhavana) for entering into Siva. Silburn has published an excellent translation of the work, which incorporates the fragment of a commentary by Ksemaraja; unfortunately, this commentary breaks off at verse 18. The emphasis of this rich text is on the direct, personal experience of the Supreme rather than on any ritualistic or external performances. It is a crucial text for our present purposes, and we will return to consider the appearance of the Heart in its verses. Its close relationship with the Kaula environment is evidenced in a statement by the Goddess- that as a result of Siva's exposition, she now understands the essence of the Rudra-yamala-tantra.85

Perhaps the highest place in the Agama Sastra is reserved by the non-dual Kashmir Shaivis for the Malini-vijaya or Malini-vijayottaratantra. This text is also referred to as the Purva-sastra, the first doctrine. The malini, or more precisely, the uttara-malini, refers to a particular arrangement of the fifty Sanskrit phonemes that was held to be of the highest ritual and mystical value.86 Abhinavagupta praises the Malini-vijayottaratantra (MVT) in the highest terms at the beginning of his TA87 References to the MVT abound in the TA, which, in some sense, can well be considered a detailed explanation and expansion of its doctrines. In addition, Abhinavagupta wrote a commentary, the Malini-vijaya-vartika, which numbers some fifteen hundred verses that are devoted to the elucidation of the first verse of the MVT. He is also said to have written another commentary on it entitled the Purva-pancika, but unfortunately this has not survived.88 Gnoli has translated the first half of the MVT in an appendix to his TA. Unfortunately, chapter 19, devoted to the kula-cakra, has not been translated, but Gnoli has translated enough to give us the overall tenor of the work. The main thrust of the text involves technical explanations of the use of mantras and the various levels of meditative absorption (samavesa) that result from their use. The introductory verses of the text claim that it is part of the much larger Siddha-yogesvari-mata-tantra, a reference that once again underscores the relationship between the Kashmiri tradition and the old lineage of the Siddhas. Here again, we see the centrality of the Kaula line, as this SYT is the fundamental text of that tradition, and so, as the origin of the MVT, it stands at the very center of the agama sastra that forms the foundation of the non-dual Kashmir Shaivas.

The first text of the non-dual Kashmir Shaiva tradition proper is the Siva-sutra-s which is said to have been inspirationally revealed to a sage named Vasugupta in about the middle of the ninth century. Ksemaraja wrote an important comment on it called the Vimarsini. Silburn has presented a translation of the text and its commentary, along with her valuable interpretative notes. The overall structure of the text arranges
the very concise sutra-s into three chapters. It is significant that *sutra* 15 of the first chapter teaches a "unification" of consciousness in the Heart. We will consider this passage in the next chapter.

The *Siva-sutra-s* in effect begin the non-dual Kashmir Shaiva tradition as a separate branch of Shaivism. Thus, Vasugupta in some sense may be considered the founder of the tradition, although from the point of view of the tradition itself, it is of course Siva who is its founder. Vasugupta apparently had two disciples, Kallata and Somananda, although there is considerable doubt as to whether the latter was in fact one of his disciples. Kallata is mentioned in the *Rajatarangini* as being a contemporary of King Avantivarman, who is usually considered to have reigned from 855 to 883. There is some debate about whether Vasugupta or Kallata wrote the *Spanda-karika-s*, the next important non-dual Kashmir Shaiva text, which deal with consciousness as *spanda* - vibration. Given the close nature of the master-disciple relationship, often the teachings of the master are codified and arranged by the disciple, and this is perhaps what happened in this case. In any case, Kallata wrote a commentary, *Spanda-vrtti*, as well as two commentaries, now lost, on the *Siva-sutra-s*. Ksemaraja also wrote two important commentaries on the *Spanda-karika-s*, the *Spanda-sandoha* and the *Spanda-nirnaya*. We do not have reference to any commentary by Abhinavagupta on the *Spanda-karika-s*. Of course, since Ksemaraja was such a close interpreter of his master's teachings, we may perhaps take his two comments as embodying Abhinavagupta's views on this text.

Somananda is known mainly as the author of the *Siva-drsti*, a very difficult text in seven chapters that has yet to be translated satisfactorily. While the *Siva-sutra-s* and *Spanda-karika-s* are concerned mainly with presenting the various paths toward spiritual enlightenment, Somananda's text takes a much more argumentative and philosophical approach to the problem of Ultimate reality. He directs powerful attacks at the grammarians and also at the Saktas, as well as passing criticisms of the Buddhists and the darsana-s. Somananda is also credited as being the founder of the Pratyabhijna branch of the non-dual Kashmir Shaiva tradition. He wrote a commentary which unfortunately has been lost, called the *Paratrimsika-vivrtti*, which Abhinavagupta quotes in his *PTv*. However, it was Utpalacarya, Somananda's disciple, who popularized the doctrine of Recognition in his *Pratyabhijna-karika-s* as well as in numerous other texts. Abhinavagupta can be directly connected to both these branches, the Spanda and the Pratyabhijna, through his teachers: Laksmanagupta, who was a disciple of Utpaladeva's and taught Abhinavagupta the Pratyabhijna system, and Bhattenduraja, who was a pupil of Mukula, the son of Kallata.
Historical Notes on Abhinavagupta

The primary sources about Abhinavagupta's life are contained in the final verses of his commentary on the Paratrimsiika and the final verses of his Tantraloka. In his definitive work on Abhinavagupta, Pandey draws these materials together with other hints and inferences to sketch the bare essentials of the available biographical information.

As far as we can tell, Abhinavagupta was born sometime between 950 and 975 C.E. to a rich and noble Brahmin family who resided in what today is the city of Srinagar. Abhinavagupta's father, Narasimhagupta (or Cukhalaka), descended from Atrigupta, who had been brought to Kashmir by King Lalitaditya (725-761 C.E.). His mother, Vimaia, died when Abhinavagupta was still quite young, and her death had a powerful effect on him. The family were all devotees of Siva, and so Abhinavagupta grew up in an atmosphere charged with religious devotion and dedication to learning.

Abhinavagupta began his studies with his father but quickly began visiting teachers in Kashmir and elsewhere. He seems to have studied everything he could: traditional texts of the dualistic and monistic Shaivism, literature, drama and aesthetic theory, darsana, Krama, Trika, and Kaula doctrines and practices. He also studied under Buddhist and Jain teachers. A love of learning and his spiritual search led him to travel outside of Kashmir, and finally in Jalandhara he encountered Sambhunatha, the powerful master who initiated him into the tantric practices of the Kaula tradition. Abhinavagupta mentions twenty teachers at different places in his works. Of these, the most important, besides Sambhunatha, are Laksmanagupta, disciple of the great Utpaladeva, under whom Abhinavagupta studied the doctrines of the Pratyabhijna; Bhutiraja, who is said to have taught Abhinavagupta the Krama system; Bhaskara, who taught Abhinavagupta the principles of the Spanda tradition, which goes back to the two great teachers, Vasugupta and Kallata; and Bhatta Tauta, Abhinavagupta's teacher of poetics, drama and philosophy of language.

From the number of teachers mentioned by Abhinavagupta and the difficulty of the subjects he studied with them, it is clear that his was a life dedicated to the absorption of knowledge in an atmosphere of extreme religious fervor and dedication. He lived a life of renunciation and study, and he never married, although for the Shaiva teachers marriage was not incompatible with a life dedicated to intense religious practice. Madhuraja Yogin, a pupil of Abhinavagupta, left four stanzas entitled the Dhyana-slokah, which give us a vivid picture of the great master at the height of his creative powers:
May the glorious god Daksimamurti (Abhinavagupta), who is an incarnation of Siva protect us! Out of his deep compassion he has taken a new bodily form and come to Kashmir. He sits in the middle of a garden of grapes, inside a pavilion made of crystal and filled with beautiful paintings. The room smells wonderful because of flower garlands, incense-sticks and (oil-) lamps. Its walls are smeared with sandal-paste and other such things. The room is constantly resounding with musical instruments, with songs and with dancing. There are crowds of Yogini-s and realized beings, siddha-s with magic powers. It is equipped with a golden seat from which pearls are hanging. It has a soft awning (italima) stretched over it (as a canopy). Abhinavagupta is attended by all his numerous students, with Ksemaraja at their head, who are writing down everything he says. To his side stand two women, partners in Tantric rites (dull), who hold in one hand a jug of wine, sivarasa, and a box full of betel rolls, and in the other hand a lotus and a citron. Abhinavagupta has his eyes trembling in ecstasy. In the middle of his forehead is a conspicuous tilaka made of ashes. He has a rudraksa bead hanging from his ear. His long hair is held by a garland of flowers. He has a long beard and golden (reddish-brown) skin; his neck is dark with shining yaksapanka powder. His upavita string is hanging down loose from his neck. He wears a silken cloth (as a dhoti) as white as moon-beams, and he sits in the Yogic position known as virasana. One hand is held on his knee holding a rosary with his fingers clearly making the sign (mudra) that signifies his knowledge of the highest Siva. He plays on his resonating lute with the tips of his quivering fingers of his lotus-like left hand. Abhinavagupta was a prolific writer. Some twenty-one of his works are available, and we have titles of twenty-three other writings that are now lost. It is probable that he wrote even more than this. His period of literary activity extends from about 990 to about 1014 C.E. Pandey proposes a periodization of Abhinavagupta's texts according to the topics dealt with in each of the texts. He groups all texts dealing with the Tantra into a Tantrika period, all texts on aesthetics into an Alankarika period, and all works on philosophy into a Philosophical period. This rather neat arrangement has been rightly criticized by Gnoli, who argues that in all probability his three interests peacefully coexisted throughout his life, with Abhinavagupta turning his attention now to poetics, now to religious Mysticism, now to philosophy, sometimes producing shorter compositions, and sometimes longer works.

It is extremely difficult to attempt a chronology of Abhinavagupta's literary output. The standard method employs a technique of identifying quotations from earlier works in later works and has been attempted by Pandey with only partially successful results. There simply is not enough evidence on which to base judgements.

However, the important available works by Abhinavagupta can at least be listed without implying anything as to the order of composition,
and without subscribing to Pandey's topical periodization. Of the philosophical works, two are the most important: (1) Isvara-pratyabhijna-vimarsini (IPv) (Laghvi-vimarsini), a commentary on Utpala's Isvara-pratyabhijna-karika-s. Pandey has published a very useful (though in places rather free) translation of this work. The IPv deserves much more sustained attention and study. (2) Isvara-pratyabhijna-vivrti-vimarsini (IPvv) (Brhati-vrtti), which is a commentary on a lost comment by Utpala himself (called the Vrtti) on his own Karika-s.

Of the tantric works, several must be mentioned. (3) The Tantraloka (TA) is the most voluminous of all of Abhinavagupta's works. Together with the commentary by Jayaratha called Viveka, it runs to some twelve volumes in the Kashmir Series of Texts and Studies edition. Gnoli has published a translation into Italian of the entire text (exclusive of Jayaratha's commentary). This is an extremely important work for our purposes in this study, and we will present translations of several important passages from it. (4) The Tantrasara (TS) is a summary of the TA, which has also been translated into the Italian by Gnoli. (5) The Paratrimiska-vivaram (PTv) is a commentary on a set of verses said to form the concluding portion of the Rudra-yamala-tantra. The verses, together with the comment, are also known as the Anutlara-prakriya. Gnoli has published a critical edition and translation into Italian of this text. The main subject matter consists of a consideration of the phonematic emanation. (6) Paratrisika-laghuvrtti (PTLv). This is a shorter comment on the same set of verses. It is interesting that Pandey does not seem to mention this work in his book, except under its alternate title of the Anuttara-tattva-vimarsini. It seems fairly clear that he had not seen this work. It has been translated twice, once by Gnoli into Italian, and once by Padoux into French. We shall present here a first rendering into English of this work. (7) Malini-vijaya-vartika (MVv). This is a partial commentary of the Malini-vijaya-tantra. It is an important text because this lantra was considered as the most authoritative revealed scripture by Abhinavagupta. It seems that what we have of the MVv is only a fragment of a larger work which has been lost. This text and the TA are the two most thorough discussions by Abhinavagupta of the doctrines and rituals of the MVT. Unfortunately, the MVv has yet to be translated into a Western language.

In addition, Abhinavagupta wrote a number of other works which have come down to us. His Paramartha-sara is a kind of summary text of some of the essential teachings of the Trika. He also wrote a commentary on the Bhagavad Gita known as the Bhagavad-gitartha-samgraha, as well as several shorter compositions. We may also mention Abhinavagupta's two important texts on aesthetics, the Dhvanyaloka-locana and the Abhinava-bharati
Tantrism: Some General Remarks

It is surprising to realize just how little scholarly attention has been focussed on the study of the Tantra. Alper's comment that for a long time the study of the Tantra was a stepchild of Indology is still valid, despite the apparent current vogue in tantric studies. In comparison with the energy and labor spent on the so-called main lines of development such as the Veda, the Upanisad-s, and classical philosophies, the enormous amounts of tantric material have been until very recently comparatively neglected. Why this neglect has occurred would make a very interesting study in and of itself. Suffice it to say that strong prejudices and insufficient insight led, and perhaps in some circles continue to lead, to a devaluation of a crucial chapter in Indian religious history: the chapter that links the developments of the post-Classical period (approximately 500 C.E.) with what may be termed the premodern or Muslim period (twelfth century onward). It is difficult to understand figures like Kabir, Caitanya, Mirabai, Lalla, Ramprasad Sen, and Ramakrsna without a knowledge of the tantric developments on which their religious world is based.

The purpose here is not to attempt a survey of Tantrism, but rather to introduce some general notions about the characteristics of the Tantra that will provide an orientation to the Kaula tradition, the specific line of Tantrism toward which Abhinavagupta contributed greatly. We will then look at those doctrines in Abhinavagupta's formulations that will form the basis for our consideration of the Heart of Siva, taken up in the next chapter.

There are very few reliable discussions of the characteristics of the Tantra in a Western language. Woodroffe's early studies are still being printed and consulted, although one must be rather careful in accepting many of his conclusions. Certainly, large portions of Eliade's Yoga are given over to a study of the nature of the Tantra. An important general survey, Bharati's The Tantric Tradition, plunges the reader directly into the thick of things without attempting a general discussion of what exactly the Tantra is. André Padoux has attempted just such a discussion in his excellent and not-sufficiently-known study, Recherches sur l'Énergie de la Parole. Goudriaan, Gupta, and Hoens provide perhaps the most complete rehearsal of just what constitutes the Tantra in Hindu Tantrism. Goudriaan and Gupta's excellent Hindu Tantric and Sakta Literature is the first detailed description of available tantric texts. It will not be out of place, however, to mention a few more important scholars of the Tantra (and in this regard we may refer the reader to the excellent bibliographies to be found in Bharati and Goudriaan).
P. C. Bagchi's excellent, though highly abstruse, *Studies in the Tantras* remains a model to be emulated. Chintaharan Chakravarti's *Tantras: Studies on their Religion and Literature* is a clear, recent survey that deserves to be read more widely. S. B. Dasgupta's *Obscure Religious Cults* introduces the reader to several tantric schools, including the Sahajiyas and the Natha Yogins, both of which are directly related to Abhinavagupta's Kaulism. Though focussing mostly on the Buddhist Tantra, the several books and articles by Alex Wayman contain much that is useful. Snellgrove's edition, translation, and study of the *Hevajra Tantra* should be read for its sane and straightforward approach to the tradition. The many books by Tucci, especially on the Tibetan Buddhist tantric materials, remain models of clarity and perception. B. Bhattacharyya's *An Introduction to Buddhist Esoterism*, though perhaps overly apologetic, still contains much that is of interest. P. Rawson's *The Art of Tantra*, while mainly a book on tantric art, contains compelling insights. The many studies by Gopinath Kaviraj are extremely useful.

The difficulties involved in actually circumscribing the Tantra have often been remarked upon. This difficulty stems directly from the fact that it is not a single school or system that is in question, but rather a broad religious movement which did not respect the boundaries of the older traditions, but spread both within Hinduism and Buddhism, and even amongst the Jains. Beginning sometime around the fourth or fifth century C.E. (some scholars would like to place the date even earlier, some much later) and spreading rather quickly after that, the tantric attitude revised, reshaped, and recast much of what preceded it. This it accomplished by means of subtle yet powerful shifts of emphasis, as well as by important reinterpretations. Some scholars see the Tantra as originating in Buddhist groups, while others see its origin in Hindu environments. This argument has developed into a kind of pointless controversy, since it is probably impossible to solve this historical problem with any degree of certitude. What is important is that we find a ferment and a cross-fertilization of religious ideas and practices occurring between these groups that would change them irrevocably. The following discussion will focus specifically on so-called Hindu tantric groups and, within these, especially on the closely interrelated Shaiva and Sakta subgroupings.

To begin with, the term *tantra* means simply "extension" or "warp on a loom." Eventually it was used in literary environments to refer to any book or tome that explains certain doctrines, and finally the term was applied to the doctrines themselves. Of course, not just any text called a *tantra* is "tantric": the best example of this is a book of Indian fables or moral tales which is title the *Pancatantra*.

We must also guard against outright equations between the *tantra*
and the Saktas, which have been judged by Payne to be "two intersecting but not coinciding circles." Certain groups which worshipped the Goddess, or Sakti, as supreme had nothing very "tantric" about them, while many tantric groups were Shaiva, Vaisnava, Buddhist, or even Jain in their primary orientation. The image of intersection is a useful one for describing the nature of the non-dual Kashmir Shaiva tradition, which forms at the intersection of Shaivism and Tantrism. Things get even more complicated in the case of Abhinavagupta, because he obviously fed at both Shaiva and Sakta sources. As we shall see, the sakti plays a central role in the Kaula formulations.

As an initial characteristic of the Hindu Tantra, a text is tantric which presents itself as revealed, without attaching itself in any way to the Veda. Such texts on the whole prescribe other rituals and other means to salvation than those offered by the Vedic texts - rituals and means which are better adapted than the Vedic Ortho-praxis to the conditions and needs of man in the kali age. These rituals and practices typically are open to all, without discrimination or distinction on the basis of caste or sex. These alternative paths and means to salvation are often termed the tantric sadhana. However, to a great extent many of the elements of the traditional brahmanism are conserved in the Tantra.

Secondly, in the tantric texts there is a strong reaction against what may be termed the Upanisadic spirit of renunciation. Tantric practitioners strive to reconcile the ascent to moksa or liberation with the experience of joyful enjoyment of the world, bhoga. The tantric jivan-mukta, or "one-who-is-liberated-while-still-alive," has not only become a master of himself, but also of the entire universe. He has become a man-god, a divinized being acting within the world rather than seeking to transcend it. Thus, the search is not just for a freedom that releases a person from suffering and transmigration, but for a powerful, even magical perfection (siddhi) and autonomy (svatantrya). Madeleine Biardeau puts the matter well when she states that the Tantra is the attempt to employ desire (kama) and all the values associated with it at the service of liberation. This attempt results from a general aim of not sacrificing this world to the purposes of salvation, but of reintegrating it somehow to the perspectives of salvation. As Padoux emphasizes, the Tantra still continues the Upanisadic search for a salvation that results from an intuitive knowledge, from a unitive fusion with a first principle.

Thirdly, the Tantra establishes a series of correlations between man, the universe, the gods, and the tantric ritual. These correlations or homologies are elaborated in a complex system of symbols that includes the human body with its so-called mystical physiology. In addition, this system of symbols takes on a markedly sexual character abounding in
what Bharati terms "polarity symbolism,"
127 involving descriptions of the "mystical" union of male and female, of Siva and sakti. Much of this symbolism is expressed in a kind of secret or technical language that is deliberately ambiguous, multivalent, and, it seems, intended to shock the prudish or exclude the uninitiated.

Fourthly, there can be little doubt as to the centrality of the sakti in all forms of the Hindu Tantra. Padoux calls this the "essential element of the tantric conceptions about the divine and the world."128 The sakti is the cosmically creative force that actually carries out the tasks of creation, maintenance and reabsorption of the universe. In addition, it is that power which is operative in human beings both as a vital force and a spiritual power. On the human level, the sakti is present in the body as the kundalini force.129 There are numerous practices related to the tantric yoga for the arousal and elevation of the kundalini, and some of these practices appear in Abhinavagupta's TA. The Goddess also most often forms the central symbolic element, or, as Bharati terms it, the "shooting target"130 of much of the ritual that pervades the Tantra.

It is important to underscore the significance of ritual and initiation in Tantrism. Certainly, ritual and initiation were not unknown before the advent of the Tantra. However, in the Tantra we find them at the very center of religious life. Ultimately, the Tantra was something into which one had to be initiated. It was without question an esoteric tradition, closed to all but initiates. Its esoteric nature becomes even more clear in the Kaula Tantra. Not only was the tradition to be entered into by means of a ritual of initiation (diksa), but the religious practice or Sadhana enjoined on the tantric practitioner was itself highly ritualized. In Abhinavagupta's teachings, this ritual is to be progressively "interiorized." As the practitioner proceeds, he becomes less and less dependent on the external puja and penetrates deeper and deeper into the direct experience of consciousness. This penetration is often theoretically described as an ascent through the cakra-s of the mystical physiology and involves a progressive mastery of the pranic forces that sustain both the physical body and the mind. Often, this mastery leads to the production and display of supernatural abilities of various sorts, magical powers, or attainments which are also common in many Yoga texts.131 These can be considered by the tradition as legitimate intermediate goals to be pursued, or even as spontaneous by-products or accompaniments to the attainment of liberation itself.

A central component in all tantric formulations has to do with the power and efficacy of 'speech'.132 Speech is divided into four progressively more manifest levels. On the most manifest level, the entire Sanskrit alphabet takes on a divine and even cosmic significance. Powerful 'speech acts' composed of mantra-s, bija-s, and vidya-s form an important part
of numerous rituals, as well as of internalized, meditative practice. One such mantra, the Heart-mantra, plays a central role in the tradition, and it will be examined later on in detail.

There are many other characteristics of the Tantra: the use of geometrical designs (mandala, yantra); the development of a kind of spiritual geography of places of pilgrimage conceived of as being in the body; and complicated numerical symbolisms. In the final analysis, the most important characteristic is that the tantric practitioner was not so much involved in the formulation of doctrinal systems or schools of thought - although of course, systematization did play a role - as he was intent upon the realization of a particular experience of the freedom, spontaneity, and unboundedness of consciousness. This experience was called by many names in different groups: samarasya, having one flavor; yuganaddha, the principle of union; sahaja, spontaneity; advaya, non-duality; and khecari, moving in the void. This accounts for what Eliade has called the "markedly experimental character of tantrism." The means for the attainment of this state of realization are myriad. In fact, one of the characteristics of the Tantra is that it employs a kind of teleological justification: any means is valid if it will accomplish the goal of taking man to this divinized state. One has only to look, for example, at the Vijnana-bhairava-tantra to see this fluidity and adaptability of means displayed.

It is in this light that we may best understand the tantric use of the forbidden, which includes the deliberate, ritual transgression of rules concerning sexuality, alcohol, eating of meat, and contact with other castes. The secret ritual (rahasya vidhi) is not a license to indulge in orgiastic behavior. Rather, it plays upon the homologies between human sexuality and human spirituality. If the goal is a spiritual union with the Goddess, and if the Goddess has somehow come to dwell within a low-caste woman, then sexual union with the woman in a carefully regulated ritual will yield a powerful spiritual result. This result is often conceived in terms of spiritual union with the Goddess, with all that union implies in terms of ascension of kundalini.

Recent Western nonacademic interest in the Tantra has tended to blur the important distinction between the tantra-sastra and the kama-sastra. India had a highly developed science of erotics, the kama-sastra, where the goal was a cultured, refined lovemaking, a perfectly acceptable fulfillment of one of the four legitimate aims of human existence, purusartha-s, that of kama. The tantra-sastra, in using the secret ritual, did not seek to fulfill kama, but rather to provide a new path for the attainment of moksa. This statement may seem obvious, but it needs saying. When we read about those portions of the Kaula ritual that include sexual
terminology, we have to remember that this ritual was often only to be internally visualized. Even in those cases where there was an external acting out of the ritual (and this possibility was open in Abhinavagupta's time only to a select few of the most advanced disciples), the purpose was the awakening of the *kundalini*, or, as Abhinavagupta often terms it, the harnessing of the *visarga*, the Emissional Power.

To understand the tantric attitude towards sexuality requires a rather drastic change of perspective. Accustomed as we are by a twentieth-century Freudian mentality to seeing sexuality as the underlying reality or meaning of all sorts and varieties of symbols, we are inclined to say that the Tantra uses sexual symbolism and projects this human symbol onto the larger scale of the universe and its origin. In order to understand the sexual aspect of the tantric "secret" ritual, however, we must first come to view the human dimension as being totally sacralized. From this sacralized perspective, the body and all of its activities are seen as divine. The process of human reproduction can then be celebrated as being itself but a specific instance, example, and even symbol, of the larger and much more important process by which the entire universe manifests from the absolute reality. This grand overflowing of the absolute reality into specific, finite realities is not in itself a sexual process. Rather, by reversing our viewpoint we can see the finite realities of human life as "marked" by the absolute reality. They indelibly belong to that absolute reality by their capacity to replicate, imitate, and participate, on the small individual scale, in the process of divine creativity. This is why the tradition refuses any outright equation between the *linga* and the phallus. Such an equation misses the essential point of the icon, that it is a representation of the divinity of Siva himself, rather than of any specific detail of human anatomy.

For the moment we can say that there is an important sense in which sexuality simply repeats and continues the overflowing of the absolute reality that manifests the entire universe as it emerges from Siva or from the womb of the Goddess. It is this macrocosmic, creative power that is important to the tantric practitioner, and not the brief and comparatively weak spasm of orgasm. The macrocosmic power known as the Emissional Power is important because if a person is successful in awakening and attuning to it, liberation will result. In this sense, human sexuality becomes a physical metaphor for this blissful, cosmic, creative wave that continuously surges at the core of all things and that may be experienced within the body as the bliss resulting from the awakened *kundalini*. Clearly, the purpose of the secret ritual is not conventional orgasm, though this may occur. It is rather the experience of union and unity known as *samata*, or *sahaja samadhi*. The ritual facilitates the discovery of spiritual awakening and ensures its permanence for the practitioner.
This discussion is motivated not by a spirit of apologetics, but rather by a spirit of precision in scholarship. Much of the denigration of the Tantra has come from a puritanical attitude both in India and in the West that is basically suspicious, and even afraid, of sexuality and the erotic life. Misunderstanding the Tantra to teach a method that allows sexuality to enter into religion by a back door, many have condemned the Tantra. Medieval India was a culture of powerful life-affirming tendencies that pursued, within the boundaries imposed by dharma, a vigorous and unabashed sexual life. The point of the Tantra was not to allow a sex-starved culture to express its suppressed desires in a sublimated religious form. Rather, the Tantra was a religious tradition that affirmed the potential experience of the sacredness and divinity of human existence in all its aspects.

Some scholars may argue that there is a similarity between the Tantra wishing to awaken beings to love and union with the God or Goddess by means of a method that employs, as one of its aspects, ritualized sexual contacts, and the aim of the kama-sastra, of making sexual intercourse as 'divine' as possible. In practice, there is no doubt that certain tantric schools became, with time, little more than institutions in which a sophisticated, complex, and rather esoteric method of lovemaking was taught. Nevertheless, the primary emphasis of the Tantra, especially in the non-dual Kashmir Shaiva groups, was the acquisition of a spiritual condition of freedom, a far more exalted goal and attainment.

The psychological sophistication of tantric groups was that they had recognized that the sources and origins of sexuality and spirituality are identical. It grossly distorts the Tantra to represent it as teaching that sexuality and spirituality are themselves identical. True, the Tantra discovered and employed certain kinds of spiritual methods that involved a consideration of the right use, channeling, conservation, and expression of sexual energies. This is not to say that tantric practices reduce spirituality simply to a kind of sexual hygiene. It is important finally to avoid conceptualizing the tantra exclusively in terms of the secret ritual. It is present in the tradition, but it must be given its proper place.

Much has been said about the "antispeculative" character of the Tantra. If the dimension of experience is finally what is important, there is no doubt that in tantric texts there is a strong streak of contempt or condescension for those who limit themselves to a kind of intellectual jugglery and do not get down to the basic task of experiential replication. As Padoux has rightly argued, we must not simply equate the total content of the Tantra with the ritualistic dimension and the resulting experiential realizations. Abhinavagupta was capable of formulating intricate doctrinal argumentation, and he did so within the larger scheme of an
overarching system of thought. Nevertheless, this philosophical activity stems from his own direct, experiential realization. It was the attempt to use vikalpa, dual, polarized thought, as a means of describing the nirvikalpa, non-dual consciousness. It is the uniqueness and importance of Abhinavagupta that, while he was a full-fledged tantric with a strong antispeculative streak running through his work, he was not deterred from producing perhaps the most sophisticated and early exposition of the theoretical underpinnings of Hindu tantric practice that has survived to this day.

The Kaula Lineage

In his authoritative study of Yoga, historian of religions Mircea Eliade remarks on a "synthesis" that culminates around the time of Abhinavagupta's life. He notes:

We see that Sahajiya tantrism (both Hindu and Buddhist), alchemy (Nagarjuna, Carpati), Hatha Yoga (Gorakhnath), and the Kapalikas here coincide: their representatives are included in the lists both of the nine N&thas and of the eighty-four Siddhas. This may perhaps give us the key to the symbolism of the Nathas and the Siddhas - at a certain period (probably between the seventh and eleventh century), a new "revelation" occurred, formulated by masters who no more claimed to be original than their predecessors had done (were they not "identified" with Siva or with Vajrasattva?), but who had reinterpreted the timeless doctrines to conform to the needs of their day. One of the essential points of this new "revelation" was that it finally completed the synthesis among the elements of Vajray&na, and Sivaist tantrism, magic, alchemy, and Hatha Yoga.141

The Kaula lineage is one of the important sources for this synthesis. This little-known tradition, which is not exactly a "school," but rather, in Alper's felicitous phrase, a "preceptorial line,"142 surely is deserving of close scrutiny. This lineage, which is linked to the Hatha Yogins, to the Siddha-s, and to the Natha Yogins, forms one of the important components of that loose amalgam we term the non-dual Kashmir Shaiva tradition. Goudriaan comments that the position of the Kula in the early tantric tradition is still unclear.143 Sanderson has recently shown the distinction in Kashmir between what he calls the Trika Kaula and the more extreme Kapalika-oriented Krama lineage.144 The Paratrimśika verses, which are distinctly Kaula in their content, form the basis for two of Abhinavagupta's most important commentaries. It is in the PT verses, which purport to represent the last part of the Rudra-yamala-tantra, that we get the clearest expressions
about the Heart, the central symbol in the non-dual Kashmir Shaiva literature. According to the tradition, the Kaula path is linked with the Sambhavopaya, described in ahnika 3 of the TA. However, this method is not the only means employed by this tradition. In addition, the secret ritual, taught in ahnika 29 of the TA, is said to stem from the kula-prakriya, the kula-method. This is the lineage into which Abhinavagupta was initiated by his guru, Sambhunatha.

Scattered throughout Abhinavagupta’s writings are many references to the Kaula lineage, as well as technical terms drawn from this tradition. There can be little doubt about the importance of this tradition for an understanding of the work of Abhinavagupta. In addition, the Kaula teachings become important in the wider sphere of the Tantra as well. As Goudriaan notes,

> With the emergence of the "Kula path," which can be proven to have taken place not later than the ninth century and perhaps even goes back to the fifth or fourth century A.D., Tantrism came to develop its probably most characteristic representative, in which the worship and mysticism of the divine Sakti became the most prominent element. (This does, however, not mean that all Kaulas were or are Saktas).

Since the true historical antecedents of this lineage are simply not accessible, let us sort through the myth of origin of this lineage according to the tradition itself. In the last chapter of the TA, Abhinavagupta states that two teachers, Lakulisa and Srikantha, were qualified to teach Shaivism. The first was the founder of the Pasupata-s. The second teacher gave instructions to three perfected beings, Tryambhaka, Amardaka, and Srinatha, to descend and teach the Shaiva doctrines of non-duality, duality, and combined duality-non-duality, respectively. Tryambhaka’s daughter founded a fourth school, named the Third-and-a-Half (ardhatryambhaka), which can be identified as the Kaula tradition, which Jayaratha calls the kula-prakriya. In fact, while the Kaula is correctly termed a tantric school, Jayaratha, the twelfth century commentator of the TA, maintains a distinction between the kula-prakriya and the tantra-prakriya: the first refers to the ardhtryambhaka line and the second to the non-dual tryambhaka teachings.

While these foundational events seem to have taken place in a kind of illo tempore, Abhinavagupta mentions Macchandanatha (Minanatha, Macchanda Vibhu, Matsyendranatha) as the founder of the Kaula tradition in the kali Age. Bagchi notes that, strictly speaking, Macchandanatha founded one of the Kaula schools known as the Yogini Kaula of Kamarupa. This accords with Jayaratha’s assertion that he lived in Kamarupa.
Jayaratha tells us that Macchandanatha was married and had six sons.

Each of these sons founded a samtana, a spiritual family, or stream of knowledge (Jnana pravaha). These are known by the technical name of ovalli-s, and each ovalli had assigned to it a particular initiatory name, a special hand gesture (mudra), a specific body cakra where meditation would be practiced (chumma), a place where they lived (ghara), took alms (palli), and a special locale where they attained enlightenment (pitha).

Closer to the time of Abhinavagupta is Sumati, perhaps the first historical teacher of the school, who is said to have lived in the South. Sumati was the teacher of Somadeva, who in turn was the teacher of Sambhunatha, who taught the Kaula practices to Abhinavagupta in jalandhara (in the Punjab). Pandey interprets a reference in Jayaratha’s comment to the TA as meaning that Kallata wrote a work on the Kaula system, but the evidence is a bit thin. Perhaps Abhinavagupta was not the first of the non-dual Kashmir Shaivas to import the Kaula teachings.

**Literature of the Kaula**

Pandey gives us a summary of the literature of the Kaulas. Before examining the texts that he mentions, we should note that the Kaula's extreme emphasis on experiential replication (hrdayangamibhuta) caused a situation in which they would tend not to value as highly the production of texts, but instead placed emphasis on initiation and practice. Nevertheless, there were some texts associated with the tradition, although we know of many of these only by reference to them in other texts.

Pandey summarizes the literature of the school as follows:

1. **Siddha-yogesvari-mata-tantra.** This tantra is said to have been very long. Consequently, it was summarized into three successively shorter texts. The first summary is the Malini-vijaya and the last is the Malini-vijayottara. As the most succinct text, this last is an essential Kaula work and was considered extremely authoritative by Abhinavagupta.

2. **Rudra-yamala-tantra.** The only extant portion of this text is the Paratrimsika. We have already mentioned the doubts some scholars have as to the precise identity of this text.

3. **Kularnava-tantra.** A more popular text on the Kaula teachings. It contains numerous later interpolations.

4. **Jnanarnava.** This text is also known as the Nitya-tantra.

5. **Nitya-sodasika-arnava.** This is sometimes called the Vamakesvara-tantra. Not published in the KSTS edition, but sometimes considered
a sort of esotrical addition to the NSA/VMT is the Nitya-hrdaya or the Yogini-hrdaya, which is actually a separate text.  

6. Svachchanda-tantra. This important and long tantra is listed because of its kaulika tendencies. Padoux disagrees with Pandey and says he would not call the SvTa Kaula text.  

7. Netra-tantra. This important tantra also shows kaulika tendencies.  

8. Tantraraja-tantra. This is a rather late tantra, which is Kaula in the sense that it is a Srividya text.  

9. Kalikula. This is a semi-agamic text which lists the names of the teachers of the tradition along with their wives.  

In addition, Silburn cites the following texts, which she says are frequently quoted by Mahesvarananda: Trisiro-bhairava, Ratna-mala, Kalikula, Kula-gahvara, Kula-mulavatara, Kula-kamala, and the Rju-vimarsini, a gloss on the Nityd-sodasika-arnava-tantra.  

Here again, Abhinavagupta's writings are of extreme importance in reclaiming the essential meanings of the Kaula lineage which we will now consider.

Meaning of the Kaula Lineage

In general, the important doctrines of the Kaulas relevant to our consideration of the P77v may be summarized under three essential categories: the effortless, "bodily" method, the group practice, and the mysticism of phonemes. Each of these three areas can be understood as exemplifying a particular meaning of the term kula.

The first category has to do with the method of realization that involves an effortless plunge into consciousness. Among other things, the Kaula tradition teaches the method known as the Sambhavopaya, the method (upaya) that relates to Sambhu, that is the Lord Siva. This method has as its basic component the direct and immediate acquisition of the state of nirvikalpa. Thus this method is reserved for very advanced practitioners. The nirvikalpa, or non-dual condition, may arise spontaneously as a result of a powerful saktipata - descent of energy. This unmediated nirvikalpa consists very simply of a doubling back of consciousness upon itself. Thus, this method borders on an effortless nonmethod, in which there is very little if any "doing" on the part of the practitioner. If the practitioner is not favored by a sufficiently powerful saktipata, then he must begin with one of the less advanced methods and work his way up to it. The essential tool in all cases seems to be the mantra, which provokes an entrance or absorption into the depths of the mind.
While the term *kula* and its related adjectival forms lend themselves to a considerable variety of meanings, all of which are played upon skillfully in the tradition (Pandey lists some twenty-two meanings of the term, drawn from different texts), nonetheless, the basic meaning from which all the other usages are generated is "group." The essential idea is that when the absolute reality of Siva manifests itself, the variety of manifest reality forms a coherent group held together by the presence within it of the underlying unity of Siva. This manifest reality can be called the *kula*, and, in contradistinction, Siva is often termed *a-kula*. Similarly, each smaller unit of manifest reality - a universe, a world, a family, an individual person (a body) - can be termed a *kula*, because it is a conglomeration of disparate objects, beings, and organs held together by an overarching unity. Because of the presence of Siva within each of these units, each part in some sense contains all the other parts. There is a kind of self-sufficiency or autonomy built into each unit of manifestation. Although each unit may take on a specific form that separates it from the other manifested realities, it is not really separate from those different realities. Each manifested unit of reality is essentially a contraction (*samkoca*) of the totality, while simultaneously the whole, due to its freedom, remains uncontracted. This kind of holistic vision accounts for much of the perplexing ease with which the tradition slides between many different levels (such as the human, the cosmic, the ritual, the bodily) that present the observer with an apparently contradictory disparateness.

This complex baggage of meaning borne by the term *kula* presents a problem for its translation as well as the translation of its related forms, *kaula*, *kaulini*, *kaulika*, and *kauliki*. Clearly, the term *group* simply does not generate the rich resonance and wide range of applicability that is intended by *kula*. We may posit as a primary translation something like "Embodied Cosmos." It is clear that the Kaula tradition teaches the primary importance of the body as the essential tool of *sadhana*. In an important sense, following the logic just outlined, the Cosmos is the body. Philip Rawson notes that according to this principle Tantra equates the human body with the cosmos. The two are, so to speak, the same functional system seen from two different points of view, and each is inconceivable without the other. The cosmos which man's mind knows, is a structure of the energy currents in his bodily system.

Similarly, Abhinavagupta comments:

Thus the body should be seen as full of all the paths, filled with the varied operations of time, and seat of all the movements of time and of space. The body seen in this way is in itself, composed of all the divinities, and thus must
be made an object of contemplation, of adoration and of the rites of fulfillment. He who penetrates in the body achieves liberation.\textsuperscript{163}

He continues by saying that, "the \textit{mantra} is the instrument by which one comes to perceive the divinities within the body."\textsuperscript{164} Thus the body, like the cosmos, can be seen as a separate unit of manifestation, which is composed of many different parts, all of which are interrelated by the presence of the divine within it.

The basic method of the Kaula lineage is the experience of the freedom of consciousness. This freedom has its paradoxical location in the Heart, where the infinite somehow comes to reside within the bodily structures, which are finite. The Kaula method is a form of bodily enlightenment in which the \textit{sadhaka} must master the powerful forces of the subtle yogic body, the divinities that reside within. It is from this perspective that we can understand why the so-called \textit{kauliki sakti}, which roughly means the power of the Embodied Cosmos, is at once a bodily energy (the \textit{kundalini}), and at the same time a cosmic force.

The Kaula lineage neither reviles nor tortures the body to achieve enlightenment. Rather, the tradition worships the body as a vessel of the Supreme. Indeed, the central tool for enlightenment is the body.

A further aspect of this process of bodily enlightenment is related to notions quite similar to those of the Natha Siddhas. Consciousness must first be liberated on its own level, which is to say that the contractions that bind consciousness must be released for it to enter the non-dual \textit{nirvikalpa state}. This \textit{process} is talked about in terms of an absorption in the Heart. At this point the state of freedom, which is the essential nature of consciousness, must be made to overflow. The outward flowing of freedom from the Heart results in a transformation of the sensory capacities. The channels of the senses, which until now functioned to bring limited information to the mind, can now be widened and can bring the infinite to the level of sensory experience. This is an initial aspect of the unitive vision, or the extrovertive \textit{samadhi}. We get hints in the \textit{PTlv} of a further stage of this process in which the finite body is divinized and immortalized. The \textit{siddha} who inhabits the body becomes like a God. The self-experience at this exalted level is that the cosmos has become one's body. The \textit{siddha} is no longer bound by the finite, physical body, but has appropriated and brought under control the entire \textit{kula}, that is, the entire, manifest reality.

The importance and centrality of this term and of the lineage which it names cannot be underestimated as a basic source for the development of the entire tantric tradition. The term \textit{kula}, starting from a basic meaning of group, comes to mean the Embodied Cosmos, which encompasses the
THE HISTORICAL CONTEXT

entire range of the manifest reality. In addition, this meaning of "group" leads to the notion of the spiritual family which practices the "bodily" methods leading to enlightenment.

The meaning of "group" as family leads us into the second significant area which characterizes the Kaula tradition, namely the concept of a group practice in which the group is an initiated and restricted in-group. This group comes to constitute a kind of spiritual family in which the guru functions as the spiritual father and the guru's wife plays the role of mother. Abhinavagupta refers to this concept of the spiritual family (samtana) in the TA.

because the notions of 'self and 'other' are equally imaginary, howsoever many become united with the teacher, he forms a single self with all of them and, as such, is called "perfected one" (siddha) and "liberated one." 165

Abhinavagupta continues:

The group that is constituted by the teacher, the teacher's wife, the brothers, and sons is not generated by a connection of blood, but rather a connection of consciousness.166

This larger consciousness-group is experienced during the group ritual. In a revealing passage Abhinavagupta says:

Consciousness, which is composed of all things, enters into a state of contraction due to the differences generated by separate bodies, but it returns to a state of oneness, to a state of expansion, when all of its components are able to reflect back on each other. The totality of our own rays of consciousness are reflected back one on the other when, overflowing in the individual consciousness of all present as if in so many mirrors, and without any effort whatsoever in an intense fashion, it becomes universal. For this reason, when a group of people gather together during the performance of a dance or of song, etc., there will be true enjoyment when they are concentrated and immersed in the spectacle all together and not one by one. Consciousness which is overflowing with bliss, even when considered individually, attains in these spectacles a state of unity and, because of that, a state of full and perfect blissfulness. The absence of causes of contraction such as jealousy, hate, etc., allows consciousness in such moments fully to expand without obstacles in a fullness of bliss, but if even one of those present is not concentrated and absorbed, then consciousness remains offended as at the touch of a surface full of depressions and protuberances because he stands out there as a heterogeneous element. This is the reason why during the rites of adoration of the circle (cakra) one must remain attentive and not allow anyone to enter whose consciousness is in a dispersed state and not concentrated
and absorbed, because he will be a source of contraction. In the practice of the circle (cakra) one must adore all the bodies of all those present because since they have all penetrated in the fullness of consciousness they are in reality as if they were our own body. If through some negligence a stranger succeeds in entering, the initiated ritual may proceed together with him provided that he does not enter in a state of contraction. Such a one, if divine grace falls upon him, will become concentrated and absorbed with the various rituals, but if he is struck by a sinister and malevolent power of the Lord, he will criticize the group.\textsuperscript{67}

This remarkable and intriguing analysis provides an inside look at the workings of the group rituals that are at the heart of the Tantric practice. A sexual aspect is certainly present in the Kaula tradition taught by Abhinavagupta, and later schools place great emphasis on the sexual aspect of these rituals. There are references throughout the Kashmir Shaiva tantric texts to the yogini-s, to the nayika-s, and to the duti-s, various names for the hypostatization of the Goddess in the human female who functions as a partner during these rituals. In the above passage, however, it is clear that the ultimate purpose of these group practices is the expansion of consciousness to its fullest possible extent.

Abhinavagupta makes explicit reference to the practice of the kula-cakra, also known as the kula-yaga, in chapter 29 of the TA. His teachings there are purported to be based on chapter 19 of the MVT. Even here Abhinavagupta's teachings deal as much with the internal states generated by the practices as they do with the external level of the ritual. In reading chapter 29 of the TA, it is often difficult to determine what specific level is being referred to. In many instances, Abhinavagupta is clearly teaching on many levels at the same time. There seems to be a deliberate ambiguity to his teachings about the Kaula practices.\textsuperscript{168}

Another important aspect of the teaching of the Kaula tradition has to do with what might be termed a phoneme mysticism, and even more precisely, a vowel mysticism. This aspect of the Kaula tradition is treated in chapter 3 of the TA, and is in great detail in the P7V, as well as being summarized in the P7'iv. The sixteen vowels, which include the bindu, the "point," and the visarga, the Emissional Power, function as symbols for different aspects of the power of the Lord.\textsuperscript{169} Using the vowels to name different aspects of the totality generates a description that plays on certain grammatical formulations of the Sanskrit as well as on graphic elements of their representation in devanagari or sarada script, in order to make statements about the totality. The totality manifests itself into different finite parts and this is accomplished by the iakti of Siva, his power that is always to be considered as not different from Siva himself.\textsuperscript{170} Indeed, the finite parts contain within them the infinity of Siva. In addition, each
vowel, and in fact each consonant as well, corresponds to one of the tattva-s. There is a complicated analysis in the P7V\textsuperscript{171} in which each tattva implicitly contains within it all the other tattva-s. This notion of unity offers a vision of the totality within each individual object of perception. Of the vowels, two of them stand as having the most powerful religious connotations namely the first vowel, A, known as the Ultimate (anuttara), and the last vowel, H, the visarga. It is significant that in chapter 3 of the TA when Abhinavagupta explains the Sambhayopaya, he spends the greater part of the chapter explaining the symbolism contained in the phonemes. Perhaps given the effortlessness of the method involved, it is difficult to explain and must indeed simply be learned and practiced in order to be understood. The symbolism of the phonemes is also important because these phonemes are the building blocks out of which the mantras are structured. Consequently, in describing the phonemes on a kind of cosmic plane, Abhinavagupta reveals the meanings that are contained in the mantras structured from these phonemes. It is especially in the P77v that Abhinavagupta reveals his teachings of the essential tool of the effortless method, the mantra. We shall now begin our examination of the symbol of the Heart.
CHAPTER 3

The Symbol of the Heart in India Prior to Abhinavagupta

Veda, Upanisad-s, Yoga Texts

There is little question regarding the antiquity of the Heart as a religious symbol in India. This chapter will review briefly the history of this symbol beginning with its appearance in the Vedic Samhita-s. While such a cursory examination cannot do full justice to the concept of the Heart prior to Abhinavagupta, this textual review will essentially serve to introduce the symbol of the Heart, and to lead us into its appearance in the non-dual Kashmir Shaiva texts. The richness of the symbol even in these early environments is profound. The primary focus of the study must be maintained: Abhinavagupta’s conception of the Heart.

Before we look at these early environments of the symbol, it is important to state that we are entering a different system of mind-body terms from that which we are acquainted with. The Heart here finally becomes quite simply a metaphor for consciousness. The Heart as it will be examined in these pages has nothing whatsoever to do with conceptions of romantic love, the emotions, eros, the sacred heart of Jesus and so on.

In a different vein, it is also important to state at the outset that the Heart as a pan-Indian symbol never attains the prominence of other, more important symbols. The purpose of this chapter is not to artificially elevate the Heart to a status it never had, but simply to trace the development of the symbol as it surfaces here and there in Indian thought in preparation for examining it in the one religious context where it does achieve some measure of importance.
The problem of the dates for the Vedic materials has been repeatedly discussed. If we accept an approximate estimate of 1500 B.C.E. for the Rg Veda, however, we realize that chronologically Abhinavagupta is closer to us than he was to his Vedic predecessors. Yet, after examining these early occurrences of the Heart, one cannot help being struck by the similarities of meaning that emerge when these early conceptions about the Heart are juxtaposed with those of the non-dual Kashmir Shaiva tradition.

A historical sketch of the symbol of the Heart must begin with the Veda. In an excellent study, the great Dutch Indologist Jan Gonda has studied the concept of vision (dhih) in the Rg Veda. As part of his task, he examined the concept of the Heart because it "fulfills an important function in the transmission and conversion of the 'visions'." Gonda's discussion serves as an excellent introduction to the Heart in Abhinavagupta's thought. In addition, it will also aid us in examining some of the history of the symbol.

The Vedic terms for Heart, hrd and hrdaya, occur close to a hundred times in the Rg Veda. In summarizing these occurrences, Gonda notes that:

1. "the heart is the organ with which one is able to see what is denied to the physical eye."4
2. "the heart is the organ by means of which one comes into touch with the Gods."5
3. "It is the heart which enables a human being to penetrate into deep secrets and mysteries."6
4. "It is in or by the heart that visions are fashioned into words."7
5. "The process which the visions undergo in the heart is . . . explicitly described as a purification or clarification."8
6. "The soma juices which are drunk by the officiants are believed to be in their 'hearts'."9
7. "By finding, with or in the heart, the light of higher insight and contact with the transcendent one becomes an all-seeing rsi."10
8. "The inspired seers who are characterized by 'vision' (dhih) watch or conceal, or what is most probable, pay heed to the god who is not subject to decay with (in) their heart."11
9. "The 'clarified butter' (ghrta) of the liturgical word which the gods produce from the seer flow from the ocean in the heart."12
10. "The liturgical words of the poets are on the other hand repeatedly said to come to the heart of a god and are expected to stay there. The hymn of praise is hence described as hrdisprj - 'touching (the god's) heart'."13
11. "... The repeated communication that the poet bears the soma in his heart."14
12. "It is expedient to remember that the terms denoting [the Heart], in the ancient languages were not used with any anatomical precision. Words for 'heart' or their derivatives were on the one hand frequently used also for 'middle or centre' and even for the 'bowels', and on the other hand, employed to denote a variety of emotions the seat of which was thought to be 'in the heart'."15

This summary of Gonda's findings on the Heart in the *Rg Veda* is important because it allows us to recognize the authenticity and, in fact, the archaic nature of the non-dual Kashmir Shaiva meanings of the Heart. At the same time, we shall see that the Shaiva tradition gives the Heart its own unique and particular inflection.

Let us examine a few specific passages from the *Rg Veda*, in the light of Gonda's summary (RV 10.129.4):

Desire came upon that one in the beginning; that was the first seed of mind. Seers seeking in their heart with wisdom found the bond of existence in non-existence.16

This verse from a famous cosmogonic hymn underscores the importance of the Heart in the search for ultimate knowledge. Moreover, it seems clear that the Heart functions as an important cosmological locale: it is in the Heart that existence and nonexistence are linked. Another important place occurs in *RV* 9.72.7:

The supporter of the vast heaven (placed) upon the navel of the earth, moistened amongst the rivers in the wave of the waters, the thunderbolt of Indra, the showerer (of benefits), the possessor of wealth, Soma, auspiciously exhilarating, distils into (Indra's) heart.17

This verse from the ninth *Mandala* emphasizes the importance of the *soma*, as it trickles into the Heart of Indra. We shall see that the Heart is the abode of immortality as well as being the ocean of consciousness. The liquidity of the *soma* will be interpreted by the Shaiva tradition as part of the fluidity of consciousness. This same underlying image of liquidity in the Heart pervades the following verse (*RV* 4.58.5-6, 11):

These streams of butter flow from the ocean of the heart . . . our words flow together like rivers, made clear by understanding deep within the heart... the whole universe is set in your essence within the ocean, within the heart, in the life-span. Let us win your honeyed wave that is brought to the face of the waters as they flow together.18
This passage seems to prefigure the notion of a power in the Heart which supports the entire universe. Also, in this and the following verse, we see the purificatory, and perhaps even salvational, effect of the *soma* that is tasted in the Heart (*RV* 1.179.5):

> By this Soma which I have drunk, in the innermost heart I say: Let him forgive us if we have sinned, for a mortal is full of many desires.\(^{19}\)

A first inkling that this power in the Heart undergoes a process of deification occurs with a passage which asserts (*RV* 9.4.6-8):

> Soma the protector of the sacrifice, the doer of good deeds cannot be resisted; he places in his heart the three purifiers, he the all-wise looks over all worlds.\(^{20}\)

The general tenor of these passages is clear: already in the *Rg Veda*, the Heart is linked with visions, with the soma, with the ocean, with the Gods, with purification, with light, and with secrets and mysteries.

An important transition towards the Upanisadic usage of the Heart occurs in the *Atharva Veda* (10.7) in a mystical verse which teaches the secret of *skambha*, the world support or pillar, and which is known by those who know the *brahman* within the heart.\(^{21}\)

Referring to the Maha *Narayana Upanisad*, the French scholar Jean Varenne has said:

> Le coeur tient un place importante dans notre texte qui, par la, se situe dans la ligne des principales Upanisads. . . . Le coeur . . . est a la fois un organe et une fonction ou, si l'on prefere, un lieu (la caverne secret) et une activite (l'intuition). . . . La presentationducoeurcommemedemeurederAme(individuelleetcosmique, atman et brahman) est, si Ton peut dire, un lieu commun dans ce type de texte. . . . Le second aspect du mot hrd- . . . ne peut manquer d'evoquer certaines pratiques du yoga: celles qui conduisent l'adepte a "voir" son Ame dans le feu qui illumine la caverne du coeur.\(^{22}\)

While this analysis refers specifically to a single and rather late *Upanisad*, it does serve as an excellent summary of the developments in that class of texts. In the *Upanisads*, we begin to read about the space within the Heart (*BAU* 2.1.17-19). One of the earliest of these texts, the *Brhad Aranyaka*, transcribes the teachings of Yajnavalkya, who declares that all sensory perceptions are gathered and united in the Heart and that it is in the Heart that one is said to rest during sleep (*BAU*2.4.11).\(^{24}\) Later in the same text the space in the Heart forms the basis of the divinities found in all five directions (*BAU* 3.9.19-25). Further on, it is identified with *brahman*. We read (*BAU* 4.1.7):
Brahman is the Heart. . . . The Heart is the seat of all things. The Heart is the support (pratistha) of all things, for on the Heart alone all things are established. The highest brahman is the Heart. The Heart does not leave him who, knowing this, worships it as such. All things run unto him. He, becoming a God, goes to the gods.  

The teacher Yajnavalkya then identifies the person (purusa) in the Heart (BAU 4.2.3; 4.3.7):  

Indha by name is this person here in the right eye. Now that which has the form of a person in the left eye is his wife, Viraj. Their meeting-place is the space within the Heart. Their food is the red lump in the heart. Their covering is the net-like work in the heart. The path that they go is that channel which goes upward from the heart. Like a hair divided a thousandfold, so are the channels called hita, which are established within the heart. Which is the soul? The person here who among the senses is made of knowledge, who is the light in the heart.  

Just as the impulses of perception are gathered up in the heart at the time of sleep, so are they also as death approaches (BAU 4.4.1-2):  

When this self comes to weakness and to confusedness of mind, as it were, then the breaths gather around him. He takes to himself those particles of energy and descends into the heart. When the person in the eye turns away, back, then one becomes non-knowing of forms, . . . He is becoming one, they say, he does not know. The point of his heart becomes lighted up. By that light the self departs, either by the eye, or by the head, or by other bodily parts.  

In addition, the Heart is equated with Prajapati, with brahman, with the All. Emphasis is also placed on the three syllables of the term hrdayam (BAU 5.3.1). A final statement in this text summarizes the teaching (BAU 5.6.1):  

This person (purusa) here in the heart is made of mind, is of the nature of light, is like a little grain of rice, is a grain of barley. This very one is ruler of everything, is lord of everything, governs this whole universe, whatsoever there is.  

The Chandogya Upanisad, also a very early text, tells us (ChU 3.12.4, 7-9):  

Verily, what the body in man is, that is the same as what the heart within man here is; for on it these vital breaths are established. They do not extend beyond it. Verily, what is called brahman - that is the same as what the space outside of a person is. Verily, what the space outside of a person is - that is the same as what the space within a person is - that is the same as what the space here
within the heart is. That is the Full, the Non-active. Full, non-active prosperity he obtains who knows this.\textsuperscript{32}

Further on, the Heart is said to have five openings for the gods,\textsuperscript{33} and these gods seem to correspond to the five vital breaths (\textit{ChU 3.13.1}). We once again find an all-encompassing description of the Heart (\textit{ChU 3.14.2-3}):

He who consists of mind, whose body is life (\textit{prana}), whose form is light, whose conception is truth, whose soul (\textit{atman}) is space, containing all works, containing all desires, containing all odors, containing all tastes, encompassing this whole world, the unspeaking, the unconcerned - this soul of mine within the Heart is smaller than a grain of rice, or a barley corn, or a mustard-seed, or a grain of millet, or the kernel of a grain of millet; this soul of mine within the heart is greater than the earth, greater than the atmosphere, greater than the sky, greater than these worlds . . . this is the soul of mine within the heart, this is brahman. Into him I shall enter upon departing hence.\textsuperscript{34}

Another relevant and famous passage discusses the "city of brahman" (\textit{ChU 8.1.1-4}):

Now, what is here in the city of brahman, is an abode, a small lotus flower. Within that is a small space. What is within that should be searched out; that, assuredly, is what one should desire to understand . . . as far, verily, as this world-space extends, so far extends the space within the heart. Within it, indeed, are contained both heaven and earth, both fire and wind, both sun and moon, lightning and the stars, both what one possesses here and what one does not possess; everything here is contained within it . . . that does not grow old with one's old age; it is not slain with one's murder. That is the real city of brahman. In it desires are contained. That is the Soul (\textit{atman}), free from evil, ageless, deathless, sorrowless, hungerless, thirstless, whose desire is the Real, whose conception is the Real.\textsuperscript{35}

References to the Heart in these passages show how closely bound the Heart is to one of the central teachings of the \textit{Upanisad-s} - namely, the teaching of the \textit{atman}.

In surveying these passages from two of the earliest \textit{Upanisad-s}, we see that the Heart, or the space within the Heart, occupies an important niche. The precise nature of this niche within the symbolic matrix of the Upanisadic teachings remains, as with so many of the Upanisadic concepts, difficult to identify precisely. As the physical abode of the \textit{atman}, the Heart functions as the center of human existence. The immortal consciousness, which is also the essence of all external existence, is located in the Heart. The goal of the Upanisadic teachings is the universal reality in the Heart. It is that which must be known in order to gain salvation.
In the *Katha Upanisad* (6.6-9) we encounter an important new dimension in the teaching about the Heart. This text mentions the Heart not only as the abode of the *atman*, but also as the instrument by which the *atman* comes to be known. In a well-known passage from this *Upanisad*, the senses, mind, true being, intellect, the unmanifest and the *purusa* are compared, and each is set on a respectively higher level. We are told that the *purusa*, which is all-pervading and without any distinctive mark, confers liberation and immortality when known. The text continues:

His form (*rupa*) is not to be beheld
No one soever sees him with the eye.
He is framed by the Heart, by thought, by the mind.
They who know that become immortal.

A similar and perhaps even clearer statement in the *Svetasvatara Upanisad* (4.17) points out the nature of the Heart: it is the place where the *atman* resides as well as the instrument by which reality comes to be known.

That god, the All-Worker, the Great Soul (*mahatman*) ever seated in the Heart of creatures, is framed by the Heart, by the thought, by the mind. They who know that become immortal.

Significantly, in this passage we encounter the God (*deva*) who is the Great Soul placed in the Heart, whereas in the *Katha Upanisad* we find reference to the more impersonal universal Self. At the end of the *Katha* (6.16-17) a final statement appears which is designed to bring the inquiring Naciketas to salvation.

There are a hundred and one channels of the Heart. One of these passes up to the crown of the head. Going up by it, one goes to immortality. The others are for departing in various directions. A person of the measure of a thumb is the inner soul (*antaratman*) ever seated in the heart of creatures.

A similar statement occurs in the *Svetasvatara* (3.20):

More minute than the minute, greater than the great is the Soul *atman* that is set in the heart of creatures here.

The *Taittiriya* (1.6.1) adds:

This space that is within the Heart - therein is the person, consisting of mind, immortal, resplendent.
It is in the Mundaka (2.2.8) that we first hear about the knot of the Heart (hrdaya-granthi). This is the knot which must be loosened in order to achieve salvation:

The knot of the Heart is loosened, all doubts are cut off, and one's deeds cease when he is seen - both the higher and the lower.\footnote{43}

Finally, several powerful passages occur in the Maitri that identify the limitless brahman with the unlimited and unborn atman. We are told that (6.18):

His is that shining form which gives heat in yonder sun and which is the brilliant light in a smokeless fire, as also the fire in the stomach which cooks food. For thus it has been said: he who is in the fire, and he who is here in the Heart, and he who is yonder in the sun - he is One.\footnote{43}

In the Maitri we also encounter several of Siva's names applied to the atman within the Heart (7.5):

He, truly, indeed, is the Self (atman) within the heart, very subtle, kindled like fire, assuming all forms. This whole world is his food. On Him creatures here are woven. He is the Self, which is free from evil, ageless, deathless, sorrowless, free from uncertainty, free from fetters, whose conception is real, whose desire is real. He is the Supreme Lord. He is the ruler of beings. He is the protector of beings. This Soul, assuredly, indeed, is Harm, Sambhu, Bhava, Rudra.\footnote{44}

The Maitri also contains a decidedly yogic passage which teaches a meditation by means of which one may reach the nonsound brahman by means of the sound (brahman) (6.22):

By closing the ears with the thumbs, they hear the sound of the space within the heart. Of it there is this sevenfold comparison: like rivers, a bell, a brazen vessel, a wheel, the croaking of frogs, rain, as when one speaks in a sheltered place. Passing beyond this variously characterized (sound-brahman), men disappear in the supreme, the non-sound, the unmanifested brahman. There they are unqualified, indistinguishable, like the various juices which have reached the condition of honey.\footnote{45}

Further on in the same text the yogic processes are discussed in terms of heat and light (6.26):

Now, it has elsewhere been said: "Assuredly, this is the heat of brahman, the supreme, the immortal, the bodiless - even the warmth of the body." For that
(heat) this (body) is the melted butter (ghee). Now, although it (i.e., the heat) is manifest, verily it is hidden in the ether (nabhas) (of the heart). Therefore by intense concentration they so disperse the space in the heart that the light, as it were, of that (heat) appears. Thereupon one passes speedily into the same condition (of light), as a lump of iron that is hidden in the earth passes speedily into the condition of earthiness. As fire, ironworkers, and the like do not overcome a lump of iron that is in the condition of clay, so (in Yoga) thought together with its support vanishes away. For thus it has been said:
The ether-storehouse of the Heart is bliss, is the supreme abode! This is ourself, our Yoga too; and this, the heat of fire and sun.\textsuperscript{46}

These various doctrines have been summarized and fitted into a coherent teaching about the Heart in another text, the Mahanarayano-panisad, where we read (13.6-12):

One should meditate upon the Supreme - the limitless, unchanging, all-knowing, cause of the happiness of the world, dwelling in the sea of one’s own heart, as the goal of all striving. The place for His meditation is the ether in the heart, the heart which is comparable to an inverted lotus bud.

It should be known that the heart which is located just at the distance of a finger span below the Adam’s apple and above the navel is the great abode of the universe.

Like the bud of a lotus, suspends in an inverted position, the heart surrounded by arteries. In it there is a narrow space called the susumna. In it everything is supported.

In the middle of that (narrow space of the heart or susumna) remains the undecaying, all-knowing, omnifaced, great Fire, which has flames on every side, which enjoys the food presented before it, which remains assimilating the food consumed, (the rays of which spread scattering themselves vertically and horizontally,) and which warms its own body from the insole to the crown.

In the centre of that Fire which permeates the whole body, there abides a tongue of fire, of the color of shining gold, which is the topmost among the subtle, which is dazzling like the flash of lightning that appears in the middle of a rain-bearing cloud, which is as slender as the awn of a paddy grain; and which serves as a comparison to illustrate subtlety.

\textit{Paramatman} dwells in the middle of that flame. (Although He is thus limited) still He is the four faced creator, Siva, Visnu, Indra, the material and efficient cause of the universe and the Supreme Self-luminous Pure Consciousness.\textsuperscript{47}

From this brief examination of the Heart in these early texts, we can see that a fairly coherent description of the reality of the Heart had already evolved in the Upanisadic corpus. We repeatedly hear about the Heart in terms of an unbounded space, fire, the sea, immortality, nectar, the lotus bud, mystical sounds, bliss, and consciousness. This description
is modified and rearranged in the subsequent centuries but does not substantially change. We have seen that the non-dual Kashmir Shaiva tradition considers as authoritative a series of agamic texts that form a distinct tradition of their own. Nevertheless, we can surmise that passages like the above from the Vedic and Upanisadic texts may have contributed to the development of the non-dual Kashmir Shaiva understanding of the reality of the Heart.

While the Heart plays an important role in the Upanisadic doctrine of the atman, the notion of the atman is by far a more developed concept. Similarly, our examination of the Vedic environment shows that the Heart does not hold anywhere as important a place in those texts as do Soma and Agni, with which it is linked. When we turn to examine the Heart in the non-dual Kashmir Shaiva tradition, however, we shall see that the symbol has been elevated to a place of central importance. It becomes a symbol for the Ultimate itself.

That a doctrine of the Heart was well established rather early on in India can be determined by the cursory references to it in later texts such as the Bhagavad Gita and the Yoga-sutra. These later authors seem to take for granted that their audience would be well acquainted with the Heart, for they do not elaborate on the concept. For example, in the Bhagavad Gita, Krsna says (15.15): "I make my dwelling in the Heart of all." And (18.61):

In the region of the heart of all contingent being dwells the Lord, twirling them hither and thither by his uncanny power (like puppets) mounted on a machine. There is a similarly brief reference to the Heart in the Yoga-Sutra (3.34):

By practicing samyama on the heart, knowledge of the mind is acquired. (Comment): The citadel of brahman (the heart), shaped like a lotus with a small aperture in it, is the seat of knowledge. By samyama on this, perception of citta arises.

In addition to the above passage, Vyasa, in his Bhasya, is equally brief, and merely mentions the lotus of the Heart in his commentary on the Yoga-sutra (1.36). There he says that contemplation practiced in the Heart will bring about consciousness of the buddhi, which is shining and like the open space (akasa). It is necessary to go to Vacaspatimisra's subcommentary to this same sutra to encounter the most detailed description of the Heart in this text-group. Here is a summary of this description:

It has eight petals, and it is situated, head downward, between the abdomen
and the thorax; the yogin must turn his head upward by stopping his breath (recaika) and concentrating his intellect (cilia) on it. In the center of the lotus is the solar disk with the letter A, and here is the seat of the waking state. Above it is the lunar disk with the letter U; this is the seat of sleep. Higher again is the circle of fire with the letter M - the seat of deep sleep. Above all these is the highest circle whose essence is air; this is the seat of the fourth state (turiya). In this last lotus, or more precisely in its pericarp, is the "nerve (nadi) of Brahma" oriented upward and reaching to the circle of the sun and other circles. At this point begins the nadi named susumna, which also crosses the outer circles. This is the seat of the cilia; by concentrating on it, the yogin acquires consciousness of the citta (in other words, he becomes conscious of consciousness).52

In his commentary to 3.1, Vyasa briefly mentions the lotus of the Heart as one of the possible locales in which to practice concentration (dharana):

Dharana consists in holding or fixing the mind on the navel circle, or on the lotus of the heart, or on the effulgent center of the head, or on the tip of the nose or of the tongue, or on such like spots in the body, or on any external object, by means of the modifications of the mind.51

Another interesting reference that echoes much of what appears in the Upanisad-s occurs in the Brahma-sutra:

(When the soul of the man who has realized the qualified brahman is about to depart), there occurs an illumination of the top of the heart. Having that door illumined by that light, the soul, under the favor of Him who resides in the heart, departs through the hundred and first nerve, owing to the efficacy of the knowledge and the appropriateness of constant thought about the course which is a part of that knowledge.54

In his Bhasya on this passage, Sankara assumes that the reader is familiar with the concept of the Heart and does no more than refer in passing to some of the same references that have been quoted above from the Upanisad-s.

While the Heart plays an important, even crucial, role in these passages, nevertheless, it serves as a container, as a space to be traversed on the path towards liberation, without being the ultimate goal itself.

Depending upon the context, views about the contents of the Heart vary. In the Vedic contexts, the soma is found in the Heart, along with visions, sounds, light, and liquids, which all either are contained in or flow from the Heart. In the Upanisadic texts, the Heart becomes the abode of the atman, the Self. Because of the powerful equation between the atman and the brahman, the Heart becomes a kind of interior universe, a repository of wholeness and completeness. This interior universe is referred to in the texts as the City of brahman. In the Yoga-sutra, the
Heart is in a sense demoted. Because of the total transcendence of the purusa demanded by the Samkhya-Yoga scheme, the Heart becomes the abode of the buddhi, the closest prakrtic counterpart to the atman. The curious fact about this entire process of change is that while new inflections of meaning continue to occur around the symbol, the older meanings do not fade totally from the scene. Instead they remain present in a subtly reinjected form.

We shall see this process at work in great detail in the non-dual Kashmir Shaiva texts. When we turn to these texts it will become apparent that all of the earlier meanings continue to operate, even as a new dimension of ultimacy is added to the symbol.

In the non-dual Kashmir Shaiva texts at least three possible levels of meaning for the Heart can be identified: the physical organ, the cakra, and the Ultimate. On the simplest level, there are occasions when what is referred to is the simple physical organ that pumps the blood. But this is a rare meaning. As Potter indicates:

> Indian philosophers use this term (the heart) to mean the place within the body where feeling, willing, thinking, and so forth take place. It does not necessarily denote the physical organ which goes by that name in Indian anatomy."

Many times, the term hrdaya refers most directly to the concept of the Heart cakra that emerged from the Upanisadic and Yogic formulations. As a cakra the Heart functions as a precise locale within the subtle physiology of Yoga. This important nexus of the vital breaths, sensory perceptions, and underlying consciousness is located in the general area of the physical heart. The cakra forms part of the subtle physiology perceived by the yogins and has no exact analogue to the anatomical structures identified by modern medicine. Eliade summarizes the usual conception of this cakra (which forms only one of six such centers).

> The anahata (anahata sabda is the sound produced without contact between two objects; i.e., a mystical sound); region of the heart, seat of the prana and of the jivatman. Color, red. Lotus with twelve golden petals (letter k, kh. g, gh, etc.). In the middle, two interlaced triangles forming a Solomon's seal, in the center of which is another triangle enclosing a shining linga. Above the two triangles is Isvara with the Kakini Sakti (red in color). The anahata cakra is related to the element air, the sense of touch, the phallus, the motor force, the blood system, etc. 56

We must bear in mind that this description of the Heart cakra is taken from a sixteenth-century work, the Satcakra-nirupana, and by that time a
considerable amount of systematization of these concepts had occurred. To complicate the matter even further there develops a tendency to distinguish between the anahata cakra with twelve petals and the hrt cakra with eight petals. This distinction seems to arise quite early and is found in a text known as the Dhyanabindu Upanisad. In the text, in addition to a heart cakra with eight petals and one with twelve petals, a cakra with one hundred petals is also mentioned.

A much later text of the Hatha Yoga, the Gheranda Samhita, describes a powerful meditation to be performed in the Heart:

(Having closed the eyes), let him contemplate that there is a sea of nectar in his heart: that in the midst of that sea there is an island of precious stones, the very sand of which is pulverized diamonds and rubies. That on all sides of it, there are kadamba trees, laden with sweet flowers; that, next to these trees, like a rampart, there is a row of flowering trees, such as malati, mallika, jati, kesara, champaka, parijata, and padmas, and that the fragrance of these flowers is spread all around, in every quarter. In the middle of this garden, let the yogin imagine that there stands a beautiful kalpa tree, having four branches, representing the four Veda-s, and that it is full of flowers and fruits. Insects are humming there and cuckoos singing. Beneath that tree, let him imagine a rich platform of precious gems, and on that a costly throne inlaid with jewels, and that on that throne sits his particular deity, as taught to him by his guru. Let him contemplate on the appropriate form, ornaments and vehicle of that Deity.

Another text of the Hatha Yoga tradition, the Siva Samhita, also describes the anahata cakra:

In the heart, is the fourth cakra, the anahata. It has twelve petals designated by the letters, k, kh, g, gh, n, c, ch, j, jh, n, t, th. Its color is deep blood-red; it has the seed of vayu, yam, and is a very pleasant spot. In this lotus is a flame called banlinga; by contemplating on this, one gets objects of the seen and the unseen universe. Its presiding deity is Pinaki, and the Kakini is its goddess. He who always contemplates on this lotus of the heart is eagerly desired by celestial maidens. He gets immeasurable knowledge, knows the past, present and future time; has clairaudience, clairvoyance and can walk in the air whenever he likes. He sees the adepts, and the goddesses known as the yogini-s; obtains the power known as khecari, and conquers all who move in the air. He who contemplates daily the hidden banalinga undoubtedly obtains the psychic powers called khecari (moving in the air) and bhucari (going at will all over the world). I cannot fully describe the importance of the meditation of this lotus; even the gods, Brahma etc., keep the method of its contemplation secret.
Gonda points out:

It should however be emphasized that all the theories and speculations of the \textit{brahman} which in its \textit{atman} aspect is held to reside in the heart have in view, not the physiological heart or the heart in the ordinary sense of the term, but the centre of the integral individual or personality of which the corporeal modality does not constitute more than a very limited part. The heart is the center of life, not only in the physiological, but also in a higher sense with regard to the Universal spirit in its relations with the individual. It is the seat of consciousness, of \textit{manah}, and \textit{buddhih}, the latter being the highest psychical organ and the basis of intelligence, which is illumined by the light of consciousness. That is to say, the heart centre is not, as such, and by nature, the abode of intuition, the source of intuitive thought, the place of contact between man and the divine power. It assumes this character only in those who are conscious of its higher function, according to the yogins through the conscious transformation of its functions.\textsuperscript{61}

In outlining these references to the Heart, we have in a sense got ahead of ourselves. There is reason to suspect that many of the later yogic conceptions about the Heart that we have been examining were in fact related to, and perhaps even influenced by (whether directly or indirectly is difficult to determine), Shaiva formulations about the symbol. In laying out some of these ideas, non-dual Kashmir Shaiva concepts are put in their proper context. As we begin our examination of the non-dual Kashmir Shaiva tradition, we will see that upon occasion Abhinavagupta's usage of the term Heart seems to be directed toward the \textit{cakra}. The elevation of the symbol to its final height, however, occurs only when the Heart is no longer used to refer to the \textit{cakra}, but rather, by synecdoche, comes to be a term applied to the Ultimate itself.

It would be counterproductive to attempt to impose too sharp a distinction here. The term \textit{hrdaya} in the Shaiva texts often seems subtly to include all three levels of meaning. A rich interplay and transposition of meanings occurs from one of these levels to another. As is the case throughout the tradition, one must be wary of wishing to clarify the precise denotation of the term at the cost of stripping it of its multiple referents and, consequently, of much of its richness.

\textit{The Heart in Early Non-Dual Kashmir Shaiva Texts}

The first explicit reference to the Heart in the non-dual Kashmir Shaiva texts occurs in the foundational text of the tradition, the \textit{Siva-sutra-s} (1.15):
Due to the union of the mind with the Heart, objects, and also the void, appear (as ... a form of consciousness).

Without analyzing this verse in the context of the larger text, it is nonetheless clear that from the first reference to it, the Heart is connected with various types of religious experience. In the present verse, it is the locus of a particular type of enlightenment experience which may be termed the *unitive vision*. In his commentary on this verse the great disciple of Abhinavagupta, Ksemaraja, explains the following:

*Hṛdaya* (in this context) means the light of consciousness inasmuch as it is the foundation of the entire universe. *Cittasamgha* (at means the concentration of the fickle mind on that (foundational consciousness), *drsyasya* means 'of all objective phenomena like blue, body, prana and mind.' *Śvapasya* means of the void, i.e. of the absence of every objective phenomenon. *Darsanam* means the appearance of everything as it is in its essential reality devoid of the distinction between subject and object like a component of oneself. (The sum and substance of the whole *sutra* is): - The individual mind intently entering into the universal light of foundational consciousness sees the entire universe as saturated with that consciousness.

The same thing has been said in the *Vijnanabhairava*:

"He whose mind together with the other senses is merged in the ether of the heart, who has entered mentally into the centre of the two bowls of the heart-lotus, who has excluded everything else from consciousness acquires the highest fortune, O Beautiful one." (Verse 49)

Here the highest fortune refers to the acquisition of the Lordship of the universe. The *Svacchanda Tantra* referring to the great *Yogi* who has attained the state of highest Reality says:

"He who has realized his identity with the Highest Reality pervading the two aspects (*adhva*) (of varna, pada, and mantra, and kala, *tattva* and *bhuvana*) manifest in the unconscious entities like the unmoving ones and conscious beings like the moving ones abides as identical with *Bhairava* in all beings, objects, *tattvas* like earth etc. and the senses." (IV, verse 310).

The same idea has been expressed in the following verse in *Spandakarika*:

"As when the *Spanda* principle pervades the body then all knowledge and action appropriate to that condition are possible, even so if he abides in his Real Self, his omniscience and omnipotence can function everywhere." 62

It is clear from Ksemaraja's comment that the Heart is connected to the realization of the highest spiritual goals defined by the non-dual Kashmir Shaiva tradition. Once the individual mind penetrates the depths of the Heart, it can re-emerge to perceive the supposedly objective external reality that it had left behind. At this point the realization occurs that the external world is simply a form of consciousness, that it is nothing but
the consciousness which is both perceiver and perceived. The Heart, then, represents a concentrated node of existential density which is transformative of the functioning of the dispersed and disenfranchised individual mind. The Siva-sutra-s, true to the usual terse and slightly opaque style common to Sutra texts, do not spell out these conceptions in any detail. Important religious concepts are simply presented; it was left to the preceptor or commentator to make explicit the concepts' true import.

In the IVaraprtyabhijnaka-rika-s, the next important text in which the Heart appears, the Heart has migrated into a densely philosophical environment which developed explicitly to clarify these early formulations. Here is how Utpaladeva, the author of the IPK, introduces the notion of the Heart:

Free and spontaneous self-apprehension (vimarsa) is the very nature of the light of consciousness. For otherwise, although reflections of external objects might fall upon it, it would be no better than an insentient crystal. Because the Self is different from the insentient: therefore it is spoken of as pure consciousness (caitanya), the implied sense of which is conscious activity or freedom with respect to conscious activities. Self-apprehending consciousness is the very self of consciousness. It is the supreme word (pari vak) which always manifests itself by itself. It is freedom (svatantra). It is the supreme power of the highest self. This consciousness is vibratory light (sphuratta). It is absolute reality (maha-satta) which is beyond spatial and temporal distinctions. This consciousness being the universal essence is called the Heart of the Lord.

In his commentary, called the Vimarsini, Abhinavagupta explains that in this last verse

_**Hrdaya**_ means mainstay or resting place. According to formerly established theory, the insentients rest in the sentient and the latter rests in the light of consciousness, with which it is one. The place of rest of this also is the power, the free-consciousness. Therefore, in different authoritative texts, the same is spoken of as the resting place of the universe, which ultimately rests in Parama Siva, the highest abode of all. The Heart (_hrdaya_), the resting place of all, is mantra, which, in its essence, is nothing but free-consciousness, which also is simply the power of the transcendental speech (_para vak_).63

In Abhinavagupta's comment we begin to see the expansion of the meaning of the Heart. A kind of nesting occurs: the insentient rests in the sentient and that, in turn, rests on the light of consciousness, which is identified as the Heart. In this passage we also see the curious tendency continuously to connect the Heart to what we have called its web of meaning: the _mantra_, the _pari vak_, the _vimarsa sakti_. 
Another early appearance of the notion of the Heart occurs in the Siva-drsti, a complex text by Utpaladeva's preceptor, Somananda. He begins in the following way:

1. Let Siva, who is co-penetrated with my own being (identified with me), praise Siva in his extended form through his own power, Siva who obscures Himself by Himself!
2. In Siva, sight (drk) and action (kriya) never cease to progress; nothing hinders the progression of his will (iccha). He is consciousness resting in itself (nirvrta), that which pervades all things. He is none other than the Self which shines forth in every form of existence.
3-4. When He is in the form of an absorption in the experience of his conscious beatitude to the exclusion of all else - in this state, indeed, He is at once will, knowledge, and action - then these three powers, which are in their most subtle form, are in a state of perfect union within Him. In this state, Siva is freed of distinctions, resolved in His conscious beatitude, in His supreme form.
5-6a. Siva appears in this state not only in the supreme stage but also when, at the outset of any act of knowing, one is in contact with the knowing-subject (as yet unclouded by the knowable and by the means of knowledge). This state of union of all powers can be, therefore, experienced by virtue of an absorption in the initial part of any form of knowledge. The same thing may be said of the final part (literally, the fruit, the result) of any act of knowledge whatsoever.
6b-7a. In this way, Siva - who is consciousness resting in itself (nirvrta) - is never separate from this triple power, neither in the state of differentiation nor (all the more) in the state of non-differentiation.
7b-8. At the moment in which the consciousness begins to tend towards the creation of the different products which make up multiplicity, one has then the initial moment (tuti) of the will. The cause of this tension is a vibrating (jrmbha - ghurnana, UD, p. 10) of amazement in the intellect (amoda = camatkara, UD, p. 10), the object of which is the expanding of the whole. The whole is none other than Siva.
9-1 la. This tension is perceptible in the locus of the Heart when one remembers suddenly a thing that must be done, at the moment in which one receives good news, when one experiences fear unexpectedly, when one sees again unexpectedly a thing which one has not seen for a long time, when one feels (in one's loins) the flow of the emission, at the moment in which one pronounces the emission, when one reads quickly, when one runs. On each of these occasions there is a mingling of all the powers (yilolata = lobibhava = misribhava).64

This remarkable statement attempts to bring the moments of total absorption of Siva and of his creative emergence from this absorption within the scope of ordinary experience. The moment of vital shock, of tension, when one
suddenly remembers something, is a common experience in which there is a kind of elevation and expansion of the mind. Similarly, when one experiences an unexpected fear there is at once a sudden awakening and sharpening of the senses and a process of retrenchment in which one abandons all unnecessary and trivial concerns and concentrates on that is causing the fear. These and the other moments described by Somananda are said to bring one to a momentary experience of the creative tension that resides and emerges from the Heart. At this point, the three powers of volition, cognition, and action mingle together and merge in much the same way that they do when one is absorbed in Siva prior to the manifestation of all differentiated objects.

Somananda emphasizes a certain kind of psychological experience available to the ordinary individual. He does not do this to denigrate the attainment of the yogin, who attains the citta-samghatta described in the Siva-sutra passage just quoted. Undoubtedly the attainments of the yogin are sources of indescribable astonishment (as is stated in SSV 1.12) and are far loftier than the ordinary experiences mentioned. However, by referring to these moments of ordinary life, Somananda illustrates the teaching that the Heart, as the locus of creative tension, does not cease functioning during ordinary life. Nor is the experience of this creative tension solely the domain of the exalted practitioner. Somananda maintains that a continuity exists between ordinary experience and the experience of the yogin precisely because all experience is a function of the underlying awareness situated in the Heart. We now turn to consider the Heart as Abhinavagupta presents it in his texts.
CHAPTER 4

The Heart as Ultimate Reality

The Heart of Siva

The Heart, says Abhinavagupta, is the very Self of Siva, of Bhairava, and of the Devi, the Goddess who is inseparable from Siva. Indeed, the Heart is the site of their union (yamala), of their embrace (samghatta). This abode is pure consciousness (caitanya) as well as unlimited bliss (ananda). As consciousness the Heart is the unbounded, infinite light (prakasa) as well as the freedom (svatantrya) and spontaneity (vimarsa) of that light to appear in a multitude and variety of forms. The Heart, says Abhinavagupta, is the sacred fire-pit of Bhairava.1

The Heart is the Ultimate (anuttara) which is both utterly transcendent to (visvottirna) and yet totally immanent in (visvamaya) all created things. It is the ultimate essence (sara). Thus, the Heart embodies the paradoxical nature of Siva and is therefore a place of astonishment (camatkara), sheer wonder (vismaya), and ineffable mystery. The Heart is the fullness and unboundedness of Siva (purnatva), the plenum of being that overflows continuously into manifestation. At the same time, it is also an inconceivable emptiness (sunyatisunya).2 The Heart is the unbounded and universal Self (purnahanta).

The Heart of Siva is not a static or inert absolute, however. In fact, the non-dual Kashmir Shaiva tradition considers it to be in a state of perpetual movement, a state of vibration (spanda)3 in which it is continuously contracting and expanding (samkoca-vikasa), opening and closing (unmesa-nimesa), trembling (ullasita), quivering (sphurita), throbbing, waving, and sparkling (ucchalata). The intensity and speed of this move-
ment is such that paradoxically it is simultaneously a perfect dynamic stillness.\(^4\)

The tradition states that the Heart is the enormous ocean (\textit{ambunidhi}), the ocean of light, the ocean of consciousness. The waters of consciousness that in man are broken by countless polarizing and divisive waves (\textit{urmi}) may be easily brought to a state of dynamic stillness by the process of immersion or absorption (\textit{samdvesa}) in the Heart.\(^5\)

The perpetual effervescence, ebullition, and incandescence at the center of Siva's being provides the motor, as it were, that drives the entire process of manifestation;\(^6\) or, as Abhinavagupta terms it, of emission of the entire universe. Equally important, through the medium of the empowered \textit{mantra}, the power that resides in the Heart provides the possibility of a return to Siva, which is to say, the possibility of enlightenment. Thus, this power in the Heart, which is the Goddess, is at once centrifugal (\textit{pravrtti}), that is, emissional and expansive, as well as centripetal (\textit{nivrtti}), that is, absorptive and unitive.\(^7\) This centripetal motion of the Goddess resides in man as the \textit{kundalini} energy that impels one back to the source and center of one's being in a completely natural and spontaneous (\textit{sahaja}) way.

Abhinavagupta identifies the Goddess in the Heart with the Supreme Word (\textit{para-vak}), the transcendent sounding of the motor of being, the primordial sound (\textit{nada}) of the fiery waters.\(^8\) This Supreme Word, while ultimately beyond any of the combinations of human speech, may be transcribed on the gross level by one of several \textit{mantras}: \textit{OM}, \textit{AHAM}, \textit{SAUH}. These and other \textit{mantra}-s, when properly empowered (\textit{mantra-virya}) by the awakened life-force (\textit{prana})\(^9\) and the consciousness of the \textit{guru}, and properly employed by the receptive disciple, engage the centripetal motion of the Heart. The fragmented and restless mind is thus calmed, awakened, and intensified by the \textit{mantra}, which, tending automatically to move to its own source, discovers the fullness and unboundedness of the Heart.\(^10\) There the disciple will hear the Supreme Word as the unstruck (\textit{anahata}) sound of the Heart which is the universal life force or cosmic breath."

Clearly, there is a richness and density of meanings interwoven in the symbolism of the Heart. By examining several representative passages from the non-dual Kashmir Shaiva texts, we can begin our attempt to analyze the web of meaning that is contained in these and similar passages.

\textit{The Heart: Siva and His Disguises}

Silburn concisely sums up the non-dual Kashmir Shaiva attitude about the Ultimate when she comments:
Cette réalité qui échappe à la détermination et ne renferme aucune des modalités habituelles de la conscience est ici nommé Bhairava, existence brahmique, coeur (hrdaya), ambroisie (amrta), réalité ultime (tattva ou mahasatta), essence (svarupa), Soi (atman), vacuité (sunnyata). Elle demeure essentiellement ineffable et peu import qu'on la qualifie de plénitude, ou de vacuité, tout vocable perdant nécessairement son sens normal lorsqu'ils 'applique au contenu de l'expérience mystique en raison de son infinie simplicité, on ne peut l'imager, ni la penser, ni la sugerer; il est donc nécessaire de l'eprouver par soi-même.  

Silburn points to a central theme: the primary importance of the direct experience of the Ultimate. As she says, the Ultimate is not something that can be imagined, thought about, or suggested. One must experience it for oneself. Given the idiosyncratic nature of personal experience, especially of experience that attempts to grasp the ineffable, it is not surprising that a great variety of terms are applied to the Ultimate. These terms form a kind of network of meaning by which the tradition approximates the Ultimate reality, which is the Heart. 

In order to grasp this network better, we can begin by turning to three revealing passages, one by Abhinavagupta and two by his disciple, Ksemaraja. The first passage occurs in the Tantrasara, a text by Abhinavagupta that summarizes many of the topics presented in much greater detail in the Tantraloka. 

In this respect the intrinsic nature of the Lord is consciousness in all of its fullness and the power of the Lord is nothing more than this state of fullness. This power is called by the sacred texts by different names in the order of the meaning of its effects. These are group (kula), efficacy (samarthya), wave (urmi), heart (hrdaya), essence (sara), vibration (spanda), magical power (vibhuti), Queen of the three (trisika), Kali, enchantress (Karsani), passionate one (Candi), voice (vani), enjoyment (bhoga), sight (drk), eternal (nitya).  

In his commentary on the thirteenth sloka of the Vibhuti Spanda section of the Spanda-karika Ksemaraja comments: 

The power of absolute freedom of the Lord which is eternal and of the form of perfect I-consciousness is, in different scriptures, called in various, innumerable ways, such as, para (the Highest), matsyodari (fish-bellied i.e. full of creative throb), Mahasatta (the Highest Being), sphuratta (the glimmer of light), urmi (wave, the great manifestation), sara (the quintessence of existence), hrdaya (the Heart, the creative centre), Bhairavi (the sakti of Bhairava), Devi (Goddess), sikha (the flame). 

A similar statement occurs in the opening pages of a text by Ksemaraja known as the Para-pravesika:
THE HEART AS ULTIMATE REALITY

(Introductory verses:)
Adoration to that brilliantly throbbing consciousness, the Heart of the Lord, which takes the form of the highest sakti and all other sakti-s, the essence of the Universe and yet transcending it.

(Commentary on this verse:)
Here indeed the Supreme Lord has as his nature the supreme light, and the intrinsic nature of that light is a free and spontaneous self-apprehension. This self-apprehension is the original and natural Egoity which manifests, illuminates, and destroys the Universe and it, in this way, shines forth.

If the supreme light were devoid of this free and spontaneous self-referential capacity, it would be powerless and inert. That self-referential capacity is given many names in the agama-s: spirit (cit), consciousness (caitanya), the ever-arising supreme word (svarasodita para vak), freedom (svatantrya), the Supreme Self (paramatman), the preeminent (mukhya), sovereignty (aisvarya), agency (kartrtva), flashing vibratory throb (sphuratta), essence (sara), Heart (hrdaya), subtle vibration (spanda) - and because of this, its real nature is that of the original natural egoity.

The Supreme Lord who is self-illuminating appears, shines along with his Supreme sakti as the nature of the world beginning with the principle of Siva and ending with the principle of the earth.15

In these passages a series of interrelated terms, among them the Heart, purport to detail the nature of the power of the Lord. Abhinavagupta observes that this power is called by different names in different texts, and that these names correspond to its different effects. The sheer diversity and variety of these terms, however, present puzzling discrepancies. It is unclear how these lists are to be interpreted. To begin with, the individual terms cannot be equated with each other. The Supreme Reality is held to be a unity by the non-dual Kashmir Shaiva tradition. If each of these terms names an aspect of the power of the Ultimate and so brings out an important facet of the Supreme, then it is not necessary that these facets be directly equated among themselves. They can all be equated directly to the Supreme and that identity is enough to unify them. This play on differences and unity is important as it reflects the bhedsbheda, the difference-nondifference interpretation of the Ultimate that seems to approximate most closely the brand of non-duality characteristic of the non-dual Kashmir Shaiva tradition.

One result of this particular philosophical interpretation is a certain kind of doctrinal flexibility. This flexibility is often encountered in Abhinavagupta's writings. It seems to be a result of an attitude which holds that while distinctions are real and true on their own level, they are also continuously being undercut by the absolute reality, which is at once the origin and negation of any possible distinction. Thus, while doctrinal
distinctions are promulgated, adherence to the master doctrine of non-duality causes a certain looseness in the tenacity with which these other, relative doctrinal distinctions are embraced. An excellent example of this flexibility is displayed in the above lists. There Abhinavagupta and Ksemaraja are not taking pains to make clear any sharp doctrinal differentiations among the different facets they are naming. Rather, the lists convey a certain deliberate relaxation of doctrinal explicitness in favor of a larger truth, the multifarious nature of Siva.

We have encountered Abhinavagupta's own comments as to the futility of any attempt at intellectually pinning down the nature of the Ultimate. Nevertheless, Abhinavagupta does emphasize certain ideas with respect to Siva. Perhaps his primary view is that Siva is the totality of consciousness that is the source of all manifest reality, at once totally transcendent and completely immanent.

Siva who is pervaded in this fashion by a subtle sounding (nada) is composed of consciousness. He who manifests himself at one and the same time as the father and mother is the creator of the entire universe.\(^{16}\)

Further, he states:

Everything that exists resides within the blessed Lord Bhairava. Whatever appears within our Heart or leaves the point of our tongue resides, I say, in Paramesvara, who is not limited by time, is one with consciousness, and is perpetually united with all the powers. He constitutes a unity which coexists without contradiction with the hundreds of creations and dissolutions which are manifested by his contraction and expansion, and it is by means of these that he expresses his freedom. This reality of Siva, therefore has neither beginning nor end and it is luminous with its own light. Its essence is a complete freedom which consists in perfect independence determined by the fullness of all things. Within itself it embraces all principles, which are in effect identical with it.\(^{17}\)

Not content to let the matter rest there, Abhinavagupta forcefully confutes those who would think of Siva as completely inactive and only transcendent. In the following passage he seems to be directing an attack on those who would equate Siva with the Samkhya notion of the purusa:

The Siva which they imagine, completely pacified, differentiated from all other things, transcendent to all the other paths, similar therefore to something insentient or inert, like a glass, does not exist anywhere at all. Siva in effect is nothing more than this consciousness, which unfolds itself everywhere in the form of a great light. Its very condition as Siva indeed consists in the fact
that all the varied forms of the universe appear. This process of manifestation into all the forms of the universe produces itself completely freely within him.\textsuperscript{18}

Here we encounter Abhinavagupta's refusal to sunder Siva and the manifest world of forms. It is this strict adherence to non-duality which brings him to admit the importance and intrinsic reality of the different aspects of Siva.

The network of terms naming the power of the Lord may also be seen as naming the guises that Siva wears as he performs one or another function. It is important to note that many of these terms refer to the Goddess in various ways. The power (sakti) of the Lord appears to take on a separate personality as the Goddess. The hypostatization of the Goddess might appear to indicate that a distinction is being postulated between the Goddess and Siva. Abhinavagupta states in no uncertain terms, however, that it is a serious mistake to conceive of the Goddess as in any way different from Siva:

\begin{quote}

The Supreme Lord is composed of five sorts of action, and in reality he is always accompanied by the sakti who in her supreme form is composed of grace; indeed, the one self is grace; for sakti should not be conceived as different from Siva.\textsuperscript{19}
\end{quote}

In the introductory verses to the \textit{PTv}, Abhinavagupta compresses into four short stanzas his conception of the Heart:

\begin{quote}

My Heart, which is composed of the emission of the quivering flashing condition of the union of the Mother and Father, whose body is full, which generates that concealed light which has five faces, producing the great and quite new manifestation, which is the abode of the stainless manifesting energies, because of its quivering and throbbing, is the supreme immortal group (kula). Within whom all this universe appears, appearing as the external luminous projection during the process of manifestation. Situated in the Supreme, which is trembling, which is immovable, to Her I bow down, the one Goddess who is the perception of one's own Self. She, who when placed in the Heart, causes to appear the triad which consists of the man, the power and Siva. I make obeisance to Her, who is the Supreme, the unequalled light of the Self, who is splendidous illumination and astonishment. Glory to the One of priceless greatness, who rules the hosts of liberated beings, the blessed primordial teacher, Sambhu, the benevolent One, Sri Kantha, the supreme Lord.\textsuperscript{20}
\end{quote}

These stanzas are a good example of the density and compression of meaning characteristic of all of Abhinavagupta's laudatory verses. In the first
verse alone, practically every major concept of the Kaula lineage is broached. In this verse reference is made to the Father and Mother in union, while the second and third verses seem directed towards the Goddess alone, and in the fourth the masculine Lord is selected for praise. Thus no exclusive favoritism is displayed at the outset.

One can note with interest that the union of the Father and Mother occurs in the Heart, portrayed here as a region of flashing, quivering, vibrating light. This light has five faces, which correspond to the traditional lists of the five faces of Siva. Furthermore, it is the source of manifestation, the origin of that which appears, that is to say, the visible reality. In this creative role, the Heart is said to be composed of the Emissional Power and to structure the Supreme \( \text{(anuttara)} \), immortal group or Embodied Cosmos \( \text{(kula)} \).

Many of these same themes occur in the \textit{PTIv}:

O lady with beautiful hips! The Heart is the subtle vibration of the triangle which consists of the incessant expansion and contraction of the three powers, and it is the place of repose, the place of supreme bliss. This very Heart is the Self of Bhairava, of that which is the essence of Bhairava, and of the blessed supreme Goddess who is inseparable and nondifferent from him.\textsuperscript{21}

This passage links the vibratory nature of the Heart to the triangle and to the three powers that compose it. In addition, the intrinsic inseparability of Bhairava and the Devi is reiterated. In both of these passages the term \textit{anuttara}, the Ultimate, appears as an appropriate appellation for the Heart. It is to this term that we now specifically turn,

\textbf{Anuttara}

\emph{Anuttara} literally means the None-Higher. Gnoli renders it consistently in this literal fashion by translating it as \textit{Senza Superiore}. Padoux prefers the slightly less literal rendering \textit{Sans-Egal}. While we might have expected a superlative adjective to be employed to express the notion of ultimacy, the insistent dynamism of the comparative, higher \( \text{(uttara)} \), preserves the supremacy of the \textit{anuttara} over any possible challenges in a way that the superlative, highest \( \text{(uttama)} \), would not have done.

The centrality of the term is clearly demonstrated by the alternative title to the \textit{PTIv} which is the \textit{Anuttara-tattva-vimarsini}, \textit{The Examination of the Principle of the Ultimate}. \textit{Anuttara}, the Ultimate, forms the reality that will be examined from many points of view in the text. In this study the term \textit{anuttara} is rendered as the Ultimate or the Supreme, in preference to the more literal but also more awkward rendering of None-Higher.
As has already been mentioned, the non-dual Kashmir Shaiva tradition holds that the *anuttara*, or Ultimate reality, cannot be accurately expressed by the finite concepts of thought and language. The term refers to that which is beyond the manifest structures of ordinary reality. Abhinavagupta likens the attempt to understand the *anuttara* to the difficulty one has in stepping on the shadow of one's own hat.22

Abhinavagupta weaves the concepts of the *anuttara*, the *kauliki*, and the Heart together in an important passage in the *TA*:

> Thus the entire universe is a reflection in the pure sky of the consciousness of Bhairava, in the Lord, and it is not at all due to the favor of anyone else. The Lord's complete independence with regard to his being the Self of the Universe is acknowledged as the highest understanding (*ipratibha*), the Goddess, the Supreme (*A*).

> That Supreme power of the Lord who is beyond the group (*akula*), is called *kauliki* because it causes the group to be manifested, and the Lord is inseparable from that Power.23

This passage clearly conveys the important idea that the *anuttara* is conceived primarily in terms of consciousness, the Bhairava, who is also the Goddess and the Supreme. In addition, it introduces the grammalogue, or code vowel, for *anuttara*, which is *A*. As the first phoneme, *A* conveys the primacy and supremacy of the Supreme. Yet *A* is not only the first vowel and phoneme; the tradition also teaches that it is present in all the other phonemes as well. Similarly, the Supreme, the origin of all manifest realities, remains present in everything that originates from It.

> The entire thrust of the *PTlv* centers around the teaching of the attainment of the direct experience of this Ultimate reality in the Heart. The introductory verses immediately announce the focus on *anuttara* and the Heart:

> Where all splendors are in the light
> And all darknesses in the dark
> Brilliant light and gloomy darkness!
> I praise that transcendent supreme light.
> Always new, hidden,
> Yet old and apparent to all,
> The Heart, the Ultimate
> Shines alone with the brilliance of the *Supreme*.24
Here again we encounter densely packed verses replete with allusions to complex Kaula teachings. The first line of the second verse transcribes Abhinavagupta's name, *abhinava* (always new), *gupta* (hidden), and perpetuates a typical play on words by which the author at once conveys his name and perhaps also conveys to his audience his complete realization of the Ultimate reality.

The very first verse in the *PT* asks how it is possible for the *anuttara* to grant the *kaulika* perfection. Abhinavagupta's comment on the first *PT* verse in the *PTIv* begins with an examination of *anuttara*:

O God, you are my own Self, always present from the beginning in knowledge and action, you alone are the Ultimate, the Superior, the Excellent, the Sur­passing; and the Supreme is the conscious perceiver with respect to the insentient, the inert. However, that perceiver whose nature is consciousness and which is self-illuminating, is not in turn perceived by another subject; thus it is termed the Ultimate.

For this reason, the Ultimate, formed of consciousness, is always present everywhere, and is devoid of spatial or temporal dimensions, of prior and subsequent; it is undeniable and unconcealed. What then can be said of it?23

By qualifying the Supreme as self-illuminating (*svaprakasa*), Abhinavagupta avoids the fallacy of *regressus ad infinitum* which might accompany the qualification of the Supreme as a perceiver (*grahakarupa*). The Ultimate is Supreme precisely because there is no other perceiver which perceives it. The Supreme is formed of consciousness (*samvidrupa*), its nature is consciousness (*cidatman*), and it is uniformly and only consciousness (*cidekarupa*). This consciousness is always present everywhere (*sarvatabhasita*). In it, the usual temporal and spatial distinctions do not hold, because it is beyond all such possible distinctions.

This condition of being beyond might have led us to choose the term *transcendent* as an appropriate translation for *anuttara*. However, the usual interpretation of transcendent includes an important denotation of separation. While the *anuttara* is an absolute reality, it is not correct to conceive of it as in any way separate from finite realities. The *anuttara* is lauded as that which is completely full (*paripurnanuttara*),26 and as the abode (*dhama*) in which everything occurs:

This is the threefold manifestation, which has the phoneme *A* as its root, and ends in the phoneme *KSA*. That manifestation is in the abode of the Ultimate *A*, has its beginning in the Ultimate *A*, and finally therein comes to repose in the very Siva. Therefore, by that knowledge, the true nature of the Ultimate, of the vibration, comes to be well known. Which is to say, that the Ultimate is only that, i.e., the entire *srti* is really only the Ultimate *A*. Thus, the power
which abides in the Heart is, above all, formed of an undivided self-referential consciousness. Then, that power, by its own innate freedom formed of the Ultimate A, turns itself into distinct cognitions whose form is the kaulikasiddhi. This has been decisively ascertained in all the Tantra-s such as the Siva, Rudra, Rahasya etc.  

The Supreme reality is Siva. Yet Siva and his sakti are inseparable. In this passage we encounter the impersonal saktic counterpart for the anuttara, the spanda. The anuttara is equated to the vibration, spatula. This vibration is the power found in the Heart, which consists essentially of an undivided self-referential consciousness (avibhaga-paramarsarupa), which is complete freedom (svatantrya).

The richness of the term anuttara is such that Abhinavagupta devotes six pages of the P7V to an extended folk etymology of the term in which a free gloss yields a variety of different meanings. Some of these meanings are: the incomparable, the highest; where there can neither be a question by the disciple nor an answer (uttara) by the teacher; where there is no need for crossing (ut-tr) to the other shore in order to attain liberation. If uttara is taken to mean that from which one emerges, namely bondage, then anuttara is liberation. If uttara is taken to mean specific verbal expressions (sabdana), then anuttara is that with respect to which there can be no use of words. Uttara can be taken as a series of graded methods that lead upward, so that anuttara is a condition in which all of these methods have been surpassed.

By playing on the various meanings of the words and verbal roots involved, and, it must be admitted, by some rather far-fetched interpretations, Abhinavagupta demonstrates a traditional method of textual and terminological interpretation much favored by Indian exeges. Rather than quibble with the accuracy of Abhinavagupta's grammatical derivations, we should perceive the enormous density of meaning which he compresses into and derives from a single term.

We turn now to another aspect of the Supreme, its condition of being a center, madhya.

Madhya: The Omnipresent Center

The Heart is madhya, which is to say that it stands in the middle, in the midst. It is intermediate; it stands between any two extremes. It is central; it is the interior, which is the space or vacuum at the center of all things. We encounter a developed teaching about madhya in the Vijnana-bhairava-tantra, an important text that was well known to Abhinavagupta.
This text consists of 112 meditative techniques for the attainment of the Ultimate reality. One of these many meditations reads as follows:

When the energy in the form of breath neither goes out nor comes back in, then it simply expands in the center into a non-dual non-discursive awareness. This is the attainment of the condition of Bhairava.29

We see that the "middle state" is instrumental in the attainment of the state of nirvikalpa, the condition of Bhairava. This attainment is contingent upon a balancing, produced by the meditative process, of the two flows of the vital breath, which is directly linked to the power.

Another meditation technique makes reference to the central vein (madhyanadi) and likens this vein to a filament of the stem of a lotus. Within this central vein or channel resides the goddess in the form of the inner firmament (antarvyoman).

The medial "vein" (nadi) is situated in the middle. It is as slender as the stem of a lotus. If one meditates on the inner vacuity of this nadi, in the form of the Goddess, then the Divine is revealed.30

The meanings of central, middle, and interior are skillfully intertwined in this verse. Meditation on this central reality unfolds, and illuminates (prakasate) that which is divine.

The notion of the madhyanadi is pursued by Abhinavagupta in contexts that allow us to see it as an important technical concept belonging to the yogic processes taught by the tradition. In the TA Abhinavagupta quotes a long passage from the Trisiro-bhairava-tantra which discusses the ascent through the "channel" of the "center" in order to achieve the plane of the mantra. The yogin must first balance the ascending and descending energies of breath, This is referred to as the method of the "stick" (dandaprayoga).32 He will then experience a great light which bestows eternal knowledge. As a result of this practice he then attains the highest abode and comes to dwell in the "city" of pure consciousness, which is free from waves and whose nature is Siva.

In the PTv Abhinavagupta goes into more detail on the entrance into the channel of the center:

The manifestation of Bhairava, the immovable abode, of Siva who transcends the Embodied Cosmos, without waves, requires that the breaths and vital energies and so on that are in the channels of the senses should be steeped and concentrated in a single place. Only under these circumstances will one be able to penetrate into the great central abode of the susumna and attain in this way
a state of identity with this trembling agitation (ksobha) of one's own power. Once this identity is achieved and the multiplicity has been dissolved, one enters into an amazement of the 'I' itself, of self-referential consciousness itself, abounding with all its powers. The manifestation of Bhairava occurs precisely as a result of this penetration which consists in a separation of the Emissional Power from the force of the great mantra and involves a union with the Rudra-Dyad which is bliss and a completely full emission."

In this passage we see that the central channel is explicitly identified with the susumna. This coincides with the reference to the "stick," a reference to the inner spinal passageway for the subtlest of vital energies. The various forms of vital energy which are dispersed throughout the sensory apparatus must be drawn inwards and amassed in one place. This concentration of energy will permit the practitioner to effect an entrance into the susumna. He then attains the agitation (ksobha) characteristic of the power. This agitation allows him to dissolve the multiplicity of finite objects and experiences and enter into the amazement (camatkara) of the infinite Self, the T.

The specificities of the yogic techniques for entrance into the central vein are generalized in other meditations of the V. BH. into a process of allowing awareness to rest in the interval between any two thoughts or perceptions. In the following two meditations these more general instructions are recommended:

At the moment when one has perception or knowledge of two objects or ideas, one should simultaneously banish both perceptions or ideas and, apprehending the gap or interval between the two, should mentally rest there. In that gap reality will flash forth suddenly. When the mind, which has just left one object, is not allowed to go toward another object, then, because of that which is between the two objects, an intense meditative realization unfolds."

The Ultimate reality is omnipresent. However, the experience of the omnipresence of the Ultimate is hindered by one's awareness of the entire range of manifest, finite objects that are constantly there to be experienced. These two meditations suggest that because of the omnipresence of the Ultimate, it may be located between the experience of any two thoughts, objects, or emotions. It is always to be found subjacent to the world of finite contents and dichotomizing thoughts. Thus, when one penetrates into the interval between any two things or ideas, one will not encounter a nothingness, but rather the fullness of the totality. This is the nirvikalpa condition, which simply shines forth when awareness penetrates into the interstices of its own contents.
Thus, the Heart as madhya underlies and mediates between any two distinctions. It can be discovered anywhere, not as an additional content of awareness, but as the uncovering of the very nature of pure consciousness itself. Thus Siva, the infinite consciousness, is spoken of as being beyond any distinctions. He is always the 'third' element that transcends, undercuts, and in the end, unifies all possible oppositions.

Ksemaraja had all of these processes in mind when he condensed into one technique the notion of the expansion of the center, madhyavikasa. He describes the technique in his Pratyabhijna-hridayam:

By the expansion of the center, one attains the bliss of consciousness.\(^{36}\)

In his commentary, Ksemaraja defines madhya as the blessed consciousness, itself present as the innermost reality of everything, without which nothing is possible, unless it be attached to that consciousness for support.\(^{37}\)

It is in the center of the center that the Sakti dwells as the power that enlivens and controls the entire wheel of sense capacities and subtle conduits. This power is conceived as the place of birth of all beings. Its nature is of the linga and karnika.\(^{38}\) In the PTlv, this powerful dimensionless 'point' of the center is the place of union of the Divine Pair, Siva and sakti. It is from this place of union that the power which manifests all of reality radiates outward.

Consciousness, which is formed of the Ultimate (A), vibrates with a seed vibration in the two extreme points of the first vowel (A), two points whose nature is that of reposing in their own-nature. And because of the power of that vibration, consciousness, which is composed of the essence of all, becomes in the central point the impulse towards the manifestation of the distinct and different cognitions.\(^{39}\)

There are other meditations prescribed in the V. Bh. that counsel an attitude of attaining the center. A particularly obscure one prescribes resting the consciousness in the interval between the fire and the poison.\(^{40}\) This obscure verse is elucidated by Abhinavagupta in the TA with reference to the mantra SAUH.\(^{41}\) This verse provides an excellent example of tantric symbolic language. The "fire" and "poison" refer at one and the same time to the moments of the beginning and end of the sexual act, and to the moments of expansion and contraction of the vital energy as it prepares to rise upward through the susumna.\(^{42}\) Another meditation consists in fixing the mind in the interval between pleasure and pain.\(^{43}\) It asserts that it is there that reality abides. Yet another meditation counsels an avoidance of both hatred and attachment and avers that it is in the freedom from these extremes that the brahman glides.\(^{44}\)
Silburn summarizes these ideas as follows:

On ne peut examiner les procedes qui servent a ouvrir le Centre sans avoir
au prealable defini le Centre lui-meme. Strictement traduit, madhya est le
milieu ou l'intervalle, mais dans le Vijnanabhairava dont il forme la charniere
maistresse ce terme est pregnant de sens; ne pas le comprendre serait renoncer a
comprendre ce Tantra. Pourtant comment determiner l'attitude si simple et
si profonde qu'il implique? Envisage du point de vue du yoga, madhya est
concu comme le point d'intersection entre deux rythmes, deux etats ou deux
choses; plenitude en tant que jonction, il devient fissure ou vide interstitiel si
on le considere comme l'intervalle qui les separe. Le yogin s'efforce de centrer
a tout moment son attention sur la jonction de son choix: jonction qui peut
porter sur deux souffles, deux sons, deux mouvements en vue de decouvrir
le juste point d'equilibre, seul et veritable lieu de repos. Des lors, il commence
des rendre a partir du point central (le Coeur), se tenant toujours imperturbable a
la jonction, ses moindres actes et pensees impregnes du sens profond qu'il
y decouvre.45

We shall now turn to another aspect of the Supreme, the categories of
prakasa and vimarsa.

The Self-Reflecting Illumination: Prakasa-Vimarsa

An important passage from Ksemaraja's text entitled Para-pravesika,
The Entrance into the Supreme, begins with a summary statement on the
nature of prakasa-vimarsa:

Here indeed the Supreme Lord has as his nature the supreme light, and the
intrinsic nature of that light is a free and spontaneous self-apprehension. This
self-apprehension is the original and natural egoity which manifests, illuminates
and destroys the Universe, and it in this way shines forth.
If the supreme light were devoid of this free and spontaneous self-referential
capacity, it would be powerless and inert. That self-referential capacity is
given many names in the agama-s: spirit (cit), etc.46

In essence, the prak&ia is the primordial light beyond and behind
all manifestations. The tradition emphasizes repeatedly that this light is
both transcendent, (taduttirna), as well as immanent (visvatmaka) in
its manifestation.47 We must not let the use of the term transcendent lead
us astray. The term visvottirna, being beyond all, places emphasis on the
infinity of Siva as opposed to the finitude of all that manifests from Him.
We cannot simply consider Siva to be the sum total of the entire manifest
reality. He is more than that, infinitely more. However, his condition of surpassing his own manifestation does not in any way cause him to be separate from that manifestation. He is within it, or, more precisely, it is within him. Abhinavagupta makes much the same point in a discussion of the nature of the Heart-mantra when he comments:

Because of this, the emission, which is situated in the center, is in immediate contact with the states of the vowel (A U) and the Being (S), which are placed at both of its extremes, and it comes to appropriate the blessed Supreme Goddess, whose nature is the Ultimate, and which abides in nondifferentiation with the Supreme Bhairava, the Great Lord, which power transcends all and at the same time is composed of all principles, and is joined with all the masses of existing things which thus form its limbs.48

The primordial light is known by a great variety of terms in the non-dual Kashmir Shaiva tradition: sphuratta, sphurana, abhasa, pratibha, ullasa. The variety of words for light employed by the Shaiva tradition may be thought to derive from the continuous attempt to describe the essentially indescribable contents of yogic experience which include great varieties of powerful and subtle phenomena of light.

In an essential sense, Siva as the Ultimate is pure unmanifested light. He is more than that, however. His light is the light of consciousness. Consequently, the tradition emphasizes the equal importance of the vimarsa aspect. This concept teaches the freedom and spontaneity of the light of consciousness. Even more importantly, the notion of vimarsa indicates the essential capacity of consciousness for self-referral. Consciousness is not just a clear crystal which, mirrorlike, reflects all things that fall upon it. It has an intrinsic capacity of self-referral which makes it alive and powerful rather than inert and powerless. This self-referential capacity is the sakti, the power of consciousness. The sakti is responsible for the process of manifestation of all finite appearances within the infinite light. This capacity to manifest has at its basis the notion of vimarsa, the capacity for consciousness to be conscious of itself. In addition, the self-referential capacity of consciousness lies at the basis of the yogic sadhana. The techniques of tantric meditation employed by the tradition engage this essential characteristic of the very nature of consciousness.

Abhinavagupta expands upon the nature of the vimarsa aspect of consciousness.

The self-referential capacity of consciousness is united with all things. From within its very self, this capacity of consciousness differentiates the other, and from the other it actualizes itself again. It then unifies both of them, the self and the other, and having unified them, it submerges them both back into itself."
It is the play between the light and the self-referential aspects of consciousness that structures the particular inflection of *bhedabheda*, dual-non-dual, characteristic of the tradition. The light is supremely stable in its non-dual, transcendent state and yet manifestation and differentiation occur. The manifestation does not represent a radical break, nor is it the emergence of a new and ontologically separate reality. It is simply an expression of the potentiality harbored within the Ultimate reality of Siva. These appearances as separate phenomena are not, in a final and absolute sense, real. The tradition never denies, however, the reality of the manifestation of appearances as a phenomenon that occurs within the Ultimate reality of Siva. The light is real and the phenomena that it displays are real. These manifested phenomena enjoy a reflected status of reality. At the same time, there is a final sense in which they are not ultimately real because they do not enjoy, as separate phenomena, the eternal existence and freedom of Siva. Abhinavagupta plays with this dialectic of non-duality and manifestation when he says:

> The light is one, and it cannot ever be divided, and for this reason there is no possible division capable of sundering the non-duality, the Lord, beautiful with light and bliss. But (someone might object) space, time, forms, knowledge, qualities, attributes, distance, and so on are usually considered to be diversifying elements. Not so (we reply), because that which so appears is nothing but the light. If the light were not such, then non-duality would be useless. Difference then is only a word devoid of reality. But even if we admit a portion of reality to differences, then according to what we have said, it will have its basis only in non-duality. This is a pot, this is a cloth, the two are different one from the other. The two are different from other cognizing subjects, the two are different even from me. All these notions are nothing but the one light, which by its own intrinsic nature displays itself in this way.\(^50\)

In terms of the philosophical categories of the theories of causation, Abhinavagupta propounds a doctrine of *satkaryavada*, in which the effects, that is, manifestation, are preexistent in the cause, that is, Siva. In addition, Kupetz has argued that Abhinavagupta's brand of *satkaryavada* is most clearly categorized as *vivartavada*: the effects do not transform the cause but are appearances (*vivarta*) within it.\(^51\) Arguing a slightly different Position, Alper contends that we should understand Abhinavagupta "as teaching a qualified - even if a highly qualified *parinamavada*."\(^52\) Alper nicely identifies the ambiguities inherent in Abhinavagupta's system when he observes:

> [Abhinavagupta] wants to hold (with *parinamavada*) that the evolution of the cosmos is a real transformation taking place wholly within a single reality.
At the same time he wants to hold (with vivartavada, but without illusionism) that this real process of transformation represents a progressive decline in level of reality from the, as it were, most real to the least real. Abhasavada is his attempt to devise a causal theory which will allow him to achieve this reconciliation. It seems to me that it is formulated not only in terms of the scholastic distinctions I have been discussing but also with an eye to Abhinava's particular understanding of liberation as jīvanmukti, and to the meditative and tantric practices believed to lead to it.

It is precisely this meditative and tantric environment in which we are here immersed. The most important goal in the tantric portions of Abhinavagupta's texts is that of facilitating the acquisition of enlightenment. This goal is often served by a persistent flexibility that consistently seems to spill over the more rigid boundaries imposed by the categories of scholastic philosophical argumentation. As Alper has so eloquently put it:

Does Abhinava have a system in the strict sense? I think so, though I am not certain. He does seem to have a coherent but unstated goal: to encompass - without reconciling - contradictions, that is, to attempt to be faithful to the confusion of experience, to be consistent to inconsistency.

One might also say that Abhinavagupta's goal was the extremely tricky task of attempting to be faithful to the fluid and subtly shifting clarities of yogic perceptions and experiences, relating them to, but never attempting to straightjacket them in, the categories of technical philosophy.

In the PTv Abhinavagupta underscores the fluidity of his notion of non-duality by an interesting analogy. He says that the supreme consciousness (parasamvid) is both light (bhasa) and self-consciousness (vimarsa). Therefore the objects that appear within it are perfectly nondifferentiated from this light of consciousness, just as water is within water or a flame is within a flame. In the same text Abhinavagupta emphasizes the importance of these two notions by stating that they constitute the essence of Bhairava:

At the beginning, reality consists only of a light (prakasa) which gives life to the spontaneous self-consciousness (vimarsa). It is none other than the essence of Bhairava which is full of the state of the transcendent egoity, whose essence is the self-referential capacity of consciousness and the state of absolute freedom (svatantrya).

In the PTIv Abhinavagupta explicitly identifies the Heart as the locality where one may find repose in the prakasa-vimarsa:
For just as in the body, which is made up of all the principles and depends on various different parts, such as the skin, etc., that Heart is called the place where there is a repose in the pure light and pure consciousness, which is not different from the parts of the body; in the same way, the body of the Blessed Lord Bhairava, which is composed of various principles, worlds, etc., which has a universal form, has a self-referential consciousness as its essence, and is composed of the fifty phonemes, so the Heart is the very essence of that, and is a self-referential consciousness which is nondifferent from all the parts of the body.

In the same text, the Heart is termed *sva-samvidrupa*, an undifferentiated self-referential consciousness. It is for this reason that the Heart plays such a crucial soteriological role. Abhinavagupta says:

> When the Heart is free of stains and a light occurs which illuminates the Supreme plane, by immersion in this shining light, one obtains identity with the Supreme Siva, that is, with consciousness.

In this verse Abhinavagupta has compressed the essence of the *Sam-bhavopaya*, the highest path for a return to Siva.

As a final reference we may look at a verse from a later Shaiva text, the *Mahartha-manjari*. Mahesvarananda, the author of this twelfth century text, states:

> Only the light of the Heart truly exists; in creative activity it is the active agent, and this activity, when it reposes in itself, is the self-referential capacity of consciousness, whereas when it begins to spread outwards it causes the manifestation of the universe.

We shall now turn to the concept of *kula*, the Embodied Cosmos that appears as a result of the interaction of the Supreme Light and its continuous engagement with itself.
The Heart as Embodied Cosmos: Kula

As the Embodied Cosmos that emerges from Siva, the kula is the grand and complex structure of lived reality. It is the bodying forth, the giving of structure to that which transcends any structure. The term may also be applied to any relatively self-contained unit of manifestation within that lived reality, whether that unit be a universe, a world, a family, or an individual. Abhinavagupta equates the kula with the Heart in the introductory verse to the PTV:

My Heart, which is composed of the emission of the quivering, flashing condition of the union of the Mother and the Father, whose body is full, which generates that concealed light which has five faces, producing the great and quite new manifestation, which is the abode of the stainless manifesting energies, because of its quivering and throbbing, is the Supreme, the immortal, the group (kula).'

This powerful verse compresses the great themes of the Kaula lineage: the Heart, the Supreme, the immortal, the Emissional Power, the union of Siva and the Goddess, the five faces or aspects of Siva, the linked powerful energies that yield manifestation, and the kula, the Embodied Cosmos. By examining the nature of the kula, we gain insight into the essential functioning of reality itself within the abode of the Heart.

In a terse, yet all-encompassing, statement, Abhinavagupta explains the relationship between the kula and the Supreme Lord:
The \textit{kula} is the power of Paramesvara, his strength, superiority, his freedom, his potency, his vigor, his mass, his consciousness, his body.

Here we see the \textit{kula} equated with the \textit{sakti}, which is the strength and superiority of the Lord, and with his freedom, a central concept in the tradition's formulations. The power of the Lord continuously and freely expresses the infinity of Siva in the variety of manifest forms that compose the \textit{kula}. The two terms, \textit{ojas} and \textit{virya}, the potency and vigor of the Lord, reflect a distinctly masculine sexual imagery, which contrasts with the femininity of the term, \textit{sakti}. The Lord emits the \textit{kula}; he blissfully and unstintingly discharges it from within himself. The term \textit{pinda}, here rendered as mass, resonates with the ritual of offering a ball or lump of flour to the departed ancestors. The \textit{kula} seems to function as a sustaining sacrificial offering that is rendered back to Siva. Finally, the \textit{kula} is said to be both the consciousness (\textit{samvid}) and the body (\textit{sarira}) of the Lord.

If Siva is the absolute totality, \textit{kula} is a term that can be applied to any emergent manifestation from that totality. \textit{Kula} seems to be applied on a sliding scale from the largest unit of manifestation to the smallest. This wide applicability of the term is possible because of the peculiar relationship of the absolute to each \textit{kula}. When the absolute reality moves to manifest itself, it can only structure each part out of itself, that is, out of the whole. If there is only one reality, then any manifestation that emerges from that reality is essentially structured out of that reality. Moreover, even as the absolute appears to be rent, split, and divided by the manifestation process, these divisions do not manage to alter the essential status of Siva as absolute. The vision of the Ultimate reality held by the tradition does not allow the totality of the absolute to be in any way impaired by the process of manifestation. Even as Siva creates the very real game of breaking himself into parts which suffer transformation, division, extinction and emptiness, he is nevertheless able to maintain himself free of the game and intact as Siva, all the while taking on the roles required by the game.

In the inconceivable enormity of Siva's game, any self-contained unit - for example, our universe - may be termed a \textit{kula}. The unit is self-sufficient precisely because it is a part that is structured out of wholeness. Since the \textit{kula}'s essential reality is finally that wholeness which it has bodied forth, every unit, or \textit{kula}, resonates in identity with every other structure composed of that wholeness. It is in this way that the human body, as a \textit{kula}, resonates in identity with the entire universe.

This resonance might be explained as a kind of parallelism between a microcosm, the body, and a macrocosm, the universe itself. The notion of \textit{kula}, however, tends to collapse the micro/macrocosm distinction. In a final sense, due to the indivisible nature of Siva, microcosm and
macrocosm are simply indistinguishable. Wherever Siva is present, the whole is present. If the body is a structure composed essentially of Siva, then all that is manifested from Siva, including the entire array of universes, may be found present in the body. Their presence in the body is not, it must be emphasized, as a microcosmic replica. The infinite reality out of which the array of universes are structured is present in the body, and thus they too are present in the body. This is the extreme to which the notion of non-duality is carried by the tradition.

These doctrines of the essential interconnection of all things within the kula represent a transcription of yogic experience. Horrifying as these doctrines may seem to the tidy logician for whom a thing is itself and nothing more, they nevertheless must be understood if we are to penetrate the tantric mode of thinking about reality.

Abhinavagupta tells us that the term kula is derivable from the root kul, which can mean a grouping together. From this meaning we can derive one of the meanings of kula, a human grouping, namely a family. Even more specifically, kula can mean a spiritual family composed in the immediate present of the guru, his sakti, and his many disciples. Kula can then be extended into the past to refer to the larger spiritual family composed of the powerful lineage of teachers that extends as far back as Siva himself. This lineage is unified by the sequential transmission of the achieved vision of the Ultimate.

In another meaning, the root implies condensation and solidification, samstyaña. When the meanings of grouping and condensation coincide, the term refers to a group of condensed or solidified objects that have manifested from the Supreme, such as the vital breath, the organs of sense, and the material elements. Because these are the very elements that appear to superimpose finiteness and limitation on the infinite reality of Siva, kula can then refer to that which binds, constricts and contracts consciousness. The bond that appears to bind and limit Siva is itself a manifestation and condensation of the power of Siva. It is in this way that the term kula can refer to realities which are apparently diametrically opposed.

An important passage in the PTV discusses the term kula in relation to the Heart:

The Heart, whose nature is consciousness, is the supreme resting place of all that exists such as blue, pleasure, and so on, as well as of the body, breath, intellect, etc. The power which consists of a sparkling vibration and which is in the Heart, by means of its own innate freedom creates artificial divisions such as the various cognitions, a pot, and so on. The power which is the Noble Lady of the group, that is of the body, breath, happiness, and so on, produces
a state of pulsation, and thus becomes the energy of the wheel of deities such as Brahmi, etc. The power, whose form is the center of the center of the entire wheel of sense capacities and subtle conduits is of the nature of the linga and karnika, the place of birth. Right there in the group is the origin of that which takes on the form of the group, namely the power of the group kauliki. Or else - that very power of the group is identical with that which is within that kula, namely the kaula, whose nature is essentially the a-kula. For the kula is produced from the light of the a-kula.

The kula, the group or Embodied Cosmos, resides within the Heart, where it is overseen by the power of the group, the kauliki sakti. This power is itself inherently inseparable from the Supreme. For this reason it is said to arise from the a-kula. The term a-kula can either be interpreted as that which is the nongroup or that which is the group of the A. In the first sense, it refers to Siva who is intrinsically beyond the Embodied Cosmos, even if that cosmos arises within him. This reading of the term seems to emphasize Siva's transcendence of the kula. In the second sense, a-kula is taken to mean the group of the A, namely the anuttara or Supreme. This is an eccentric but permissible use of what would usually be interpreted as a negative prefix. This reading of the term seems to point once more to the inseparability of the kula and the Supreme. While the grammatical interpretation of the compound differs, the one being a karmadharaya, the other a tatpurusa compound, in the final result these are simply two different ways of referring to the same absolute reality.

Abhinavagupta clarifies the distinction between kauliki and a-kula in the following verse:

The Supreme, anuttara, the Ultimate, the highest abode is called the non-group (a-kula). The emission is called the group (kauliki) power of the Lord.

A complementary statement occurs in the same chapter:

The Lord's complete independence with regard to his being the Self of the universe is acknowledged as the highest understanding, the Goddess, the Supreme (A). That Supreme power of the Lord who is beyond the group (a-kula), is called kauliki because it causes the group to be manifested, and the Lord is inseparable from that power.

Once again, the dual-non-dual viewpoint provokes a subtle interplay in which distinctions are made and then carefully undercut. Padoux comments:

Les termes de kula et d'akula en effect, lorsqu'ils sont appliques a l'energie, designent celle-ci sous sa forme la plus haute, inseparable de Siva, pure energie.
de la conscience citsakti. L'énergie de kula est propre à la catégorie de la pleine conscience supreme (purnaparasamvittattvalaksana) ou apparaissent et disparaissent les univers et elle nait d'akula qui est la même énergie, mais envisagée sous un aspect dont la transcendance est plus nettement affirmée.\(^{10}\)

The long passage translated above from the PTv occurs in the comment to the second sloka of the PT. Slight differences occur in the Sanskrit text of the two published versions of this text, that is, as it is found in the PTlv and the P7V.\(^{11}\) One of the revealing differences occurs as follows. Sloka 2b in the PTlv reads: "hrdayastha tu ya Saktih kaulini kulanayika," whereas sloka 2b in the PTv reads: hrdayastha tu ya saktih kauliki kulanayika." The entire verse (slokas 2b-3a:) may be rendered as:

Reveal to me that power which abides in the Heart, known as the kaulini, the noble Lady of the group. O Lord of Gods, reveal to me that by means of which I may obtain satisfaction, the T.

The PTlv version contains the reading kaulini, a feminine adjectival form meaning something like "relating to the kula." This reading seems at first glance to be a simple misreading for several reasons. First, the Sarada N is fairly close to a K. Given even a slightly careless transcription of manuscripts, it is conceivable that the two phonemes might be confused. Thus, we could easily imagine that this reading results from a simple scribal error. Secondly, the PTv reading, kauliki Sakti, is a phrase that occurs numerous times in the texts, whereas kaulini does not seem to be repeated except in the comment to this verse in the P7Yv.

On the other hand, we may be encountering here not so much a mistake as a deliberate pun. In the first place, in terms of meaning there is no recognizable difference between the two terms. So kaulini may simply be an accepted variant for the more common kauliki. Secondly, kaulini may have been preferred because the expression which follows it, kulanayika, can then be taken as a kind of gloss on it. Specifically, the term nayika, translated here as "noble Lady," can also mean "mistress" or "courtesan." This term is derivable from the root ni, to lead. The ending -ni, which can be seen at the end of the word kaulini, is grammatically the feminine adjectival ending. However, the reading kaulini may have been chosen because the -ni ending conveniently coincides with the root ni, from which the term nayika is derived. So the adjective kaulini may have been preferred because it served to compress neatly the term kulanayika. In addition, it may have been preferred as alluding more directly at once to the Goddess who leads and presides over manifest reality, as well as to her human instantiation who presides over the secret ritual.
The only other occurrence of the simple term *kula* in the *PT* verses is to be found in *sloka* 20a: "Sakini-kula-samanya" or "He becomes equal to the family or troop of Sakini-s." Here we are prompted by Abhinavagupta's comment to interpret Sakini not as a lower group of mythological female deities, but as the *devatacakra*, the very highest wheel or circle of deities itself. In the comment to the verses 2b-3a above, Abhinavagupta explains why the *sakti* is to be called *kaulini*:

> The power which resides in the Heart of consciousness is freedom itself. The purpose of its creative activity is the group (*kula*), the entire range of perceiving subject, perceived object, and process of perception. Thus it is called *kaulini* - having to do with the group. She is the noble Lady of that constructed group, she rules over it. By knowing it, she causes its manifestation, as well as reabsorbing it in herself. Reveal that power to me, lead me on the path of reflexive awareness, so that, when that power is transformed into a firm cognition in my awareness, I may attain contentment of both kinds, enjoyment and liberation, a contentment whose nature is of the consciousness of all beings, that is, the 'I'.

The initial query of the Goddess in *sloka* 1, "O Lord, how can the Ultimate of its own accord grant the *kaulika* perfection," coupled with the request in verses 2b-3a that the *kaulini sakti* be revealed to her, represents, according to Abhinavagupta, the very cry of the unawakened but powerful consciousness that is about to encounter its own deepest potentiality in the Heart. When the Goddess, here questioning Bhairava about herself, about the *kaulini sakti*, has achieved her awakening, then she has also awakened to her continual status of identity with Bhairava and so she, who has become him, is able to answer her own question. To insist upon the still-nagging question - how does she achieve awakening before she has been instructed by Bhairava, who cannot instruct her until she has awakened to her identity with him - is to introduce a fallacious and inappropriate element of temporal precedence and sequence that is wholly absent from this divine interaction.

The question the Goddess is posing amounts to a request for instruction in the *Sambhavopaya*, the direct plunge into the Ultimate reality of the Heart. This highest of methods for realization does not actually involve a method as such, but represents rather the simple and unmediated operation by which finite realities spontaneously and continuously recover their true status as absolute. The Goddess wishes to know how this process can bring the highest possible realization to the embodied cosmos, the *kula* - how it can bring the perfection known as the *kaulika*.

How, in what way, does He, of his own accord, freely, "give," that is to say,
produce, the manifestation intelligible to both organs of sense and action of the kaulika, produce the perfection of the kaulika, which is the sum total of the group consisting of the ever-new bodies, senses, worlds? Moreover, the spiritual perfections are obtained by the practice of the yoga of the vital breath etc., by a series of practices such as concentration etc. How can the Ultimate, which is devoid of temporal succession and is only consciousness, grant the kaulika perfection, linked to temporal succession, by the mere knowing of which, one would obtain the nature of the Goddess?"

The response she obtains from Bhairava is, on one level, a simple restatement of her question:

The Lord Bhairava said:
Hear, O Goddess, O One of great fortune, about the higher than the highest and also about the highest. I will describe to you the Ultimate so that no doubt remains, the Ultimate which grants the kaulika perfection. That kaulika function, O Goddess, abides in the great space of my Heart.

(commentary on 3b-4:)
The Ultimate grants that kaulika perfection, that is to say, it manifests, etc., everything, and has as its aim the contentment which consists of both enjoyment and emancipation. I shall describe that Ultimate to you, which is to say I shall lead you to realize it directly in your Heart. In this way, as soon as you have succeeded in understanding, you will be free from doubt about this forever. (The pronoun ayam is employed to indicate that the kaulika function is apparent to all.) Indeed, that kaulika function resides in the ether of my Heart, where its nature is consciousness, and it is always known as being in the Heart.16

In this response Bhairava introduces a new term, the kaulika-vidhi, rendered here as the kaulika function. The word vidhi can mean a command or rule, a procedure or method, a means, an action. Within the very nature of the Heart, in the great space of the Heart, resides a procedure for the direct realization of the nature of the Heart, and this is the kaulika function. The nature of the Heart functions to manifest the realities known collectively as the kula. Manifestation does not exhaust its purpose, however. It continuously functions to bring these realities to perfection again. Abhinavagupta describes the expansion of the kaulika-vidhi further on in the PTLv:

Thus, the kaulika function which is truly contained in my Heart, where it is identical with consciousness, now, that is, without interruption, constantly, begins to spread by the power of the cognition of objectivity.17

We have seen that the Heart is the Ultimate and that it is also the center. In connection with this kaulika function, the term madhya might
also profitably be rendered as "junction point." Madhya is that point from which the finite realities emerge from the Ultimate and also continuously dissolve back into the Ultimate. This threshold function of the Heart makes of it a kind of paradoxical no-man's-land, a boundary which, because it shares and participates simultaneously in the characteristics of the Ultimate and of the finite realities, is also somehow different from either one of those conditions.

This condition of liminality is the precise nature of the Heart. Here the finite realities of the kula are dissolved back into the a-kula, that is, they lose their finite characteristics and are resolved back into Siva, into the infinite. One might properly say both that they are destroyed into nothingness and that they are expanded into the totality. In either case, their structure as finite realities per se disappears.

However, the power of the kula can also function as the kaunik sakti to bring a perfection and expansion of the finite realities in such a way that they do not apparently lose their characteristics and structures as finite realities. This situation occurs in the specific case of the finite self, the anu. The anu, or atomic self, represents clearly this liminal condition referred to above. Standing at the center between the infinity of Siva and the inertia of matter, it is able to mediate the transformation of the finite into the infinite. Because the anu represents that contraction of the Ultimate where Siva recovers consciousness of himself, it may feed on the abundance and plenitude of the Ultimate and expand to a state of perfection and fulfillment while still maintaining its finite boundaries. This is the attainment of satisfaction (trpti) which is described as bringing both enjoyment and liberation (bhukti-mukti).

Abhinavagupta explicitly identifies the kaunik sakti with the visarga, the Emissional Power. It is the harnessing of the Emissional Power that constitutes the essential method for liberation for the tradition. Under either reading, kaunik or kaulini, this sakti represents another term for the visarga, the Emissional Power, the manifestational energy. The visarga represents the central divine dyad which is simultaneously and continuously expansive and contractive in nature. Both the kaunik sakti and the visarga are directly linked with the vimarsa, the self-referential capacity of consciousness. Thus, the highest power that rules over the entire manifestation revolves in utter simplicity around the inherent freedom and spontaneity of consciousness.

Abhinavagupta describes the nature of the kula in the following way:

"It is within the kula that the kaunik siddhi arises and it is formed of bliss. . . . It is identical with the self-referential capacity of Siva whose characteristic is the supreme consciousness whose nature is the Heart. For indeed the kula,
because it is identical with the essential self of the Supreme, grants that perfection. \textit{Kula} is termed the circle of rays of the splendor of the supreme Lord Bhairava made of the abundance of his own light. When this \textit{kula} achieves cessation characterized by coming into identity with the interiorized consciousness of Bhairava, then it is nothing but the supreme beyond space and time, consisting of the enjoyment of the nectar, the immortal supreme bliss, the immovable, which takes on the form of the Emissional always and everywhere present.\textsuperscript{20}

The identification of the \textit{kaulika siddhi} with the \textit{vimarsa} in this passage is important. In the \textit{PTIv}, Abhinavagupta distinguishes between the \textit{anuttara} and the \textit{kaulika siddhi} by saying that the former consists entirely of an undivided self-referential consciousness \textit{(avibhaga-paramarsa)}. The latter opens the way for distinct and specific cognitions \textit{(vibhaga-paramars'a)}, the finite realities, which are formed of the fifty specific cognitions described in some detail in this portion of the commentary:

Thus, the power which abides in the Heart is, above all, formed of an undivided self-referential consciousness. Then, that power, by its own innate freedom formed of the Ultimate \textit{A}, turns itself into distinct cognitions whose form is the \textit{kaulikasiddhi}.\textsuperscript{21}

It becomes clear however, that the function of the \textit{kaulika siddhi} is not limited to the attainment of this outward manifestation of finite realities. Further on in the \textit{PTIv}, the \textit{kaulika siddhi} is equated to the condition of \textit{jivan-mukti}:

He is united with this Heart as soon as this has appeared before him. The state of liberation of one who is still alive, characterized by an absorption into the pair of the Sri Bhairava, is precisely this attainment of the Heart. As soon as it appears, the Ultimate \textit{(A)}, which is formed of consciousness only, grants the highest \textit{kaulika} perfection, which is precisely a state of liberation while one is still alive.\textsuperscript{22}

The notion of \textit{kauliki siddhi} can be interpreted in several ways. On one level, the \textit{siddhi} or accomplishment of the \textit{kula} is simply the full-blown manifestation composed of the fifty principles. This is the expansion of Siva's nature, his play, which involves the concealment of Siva from himself. On another level, \textit{kauliki siddhi} can refer to the extraordinary capacities \textit{(vibhuti)} that can be made to operate within the \textit{kula}, that is, within the achieved experience of the body/cosmos. Finally, \textit{kauliki siddhi} represents the highest condition of the liberated being, the \textit{jivanmukta}, who has successfully embodied in his own awareness the totality of the Heart, of
the *kula*, the manifested cosmos, the power of Siva, as well as the very unboundedness of Siva, the primordial consciousness itself.23

**The Divine Pair in Union**

Abhinavagupta describes the Lord and the power as being united in the *kula*:

*Kula* being Siva and *sakti* united together, the perfection of the powers manifests itself as liberation in this very life.24

We encounter here the notion of a divine pair perpetually united in the Heart, the Lord and Lady of the *kula*: *Kulesitr*, the Supreme, A and *Kulesvari* AM.25 Whereas the emphasis of the term *anuttara* remains on a powerful non-duality, a perpetually unificatory reality which cannot be broken or divided in any way, this is a new formulation. On the basis of this unsunderable reality, the tradition feels free to posit the functioning of two interactive poles of reality within the Heart. While these poles do not break up or divide the unity in any way, it is necessary to posit them as mutually united yet somehow differentiable aspects of the functioning of the Ultimate. As a result of this union manifestation is able to occur:

The twinned form of Siva and *sakti* is known as the union. It is termed the power of bliss (A) because the entire universe is emitted by it. That reality which is higher than the highest and the lowest, is called the Goddess, that reality is the essence, the Heart, the supreme Emissional Power of the Lord.26

Once again the curious manifestation of grammalogues comes into play. The *yamala*, "twinned form," represents the union of the Supreme with itself. This union can be represented as the summation of A + A which yields, by the traditional rules of Sanskrit *samadhi*, the phoneme A. A is the grammalogue for *ananda*, bliss. It is therefore not unexpected that the *yamala* or *samghatta* should be termed the power of bliss. As the Supreme doubles back on itself, a rubbing or clashing together, a friction or collision, a union or junction of itself with itself, a self-embrace occurs. These are the patently sexual meanings of the term *samghatta* employed here on a metaphysical level.27 The absolute consciousness doubles back on itself as part of its inherent and continuous nature, the *vimarsa* aspect of the absolute. This doubling back on itself generates a blissful creativity, a blissful power that generates the entire universe. This is the blissful nature of the Emissional Power.
THE TRIADIC HEART OF SIVA

The union of the Father and the Mother that occurs in the Heart and the kula may be interpreted on many levels. In the Heart abides that fertile and paradoxical coexistence of the Supreme and the power that will manifest finite realities. This productive reality is seen in terms of a duality of powers, a duality that does not divide the essential non-duality of the Supreme, yet is capable of causing the Supreme to flow forth in creativity.

On another level, the kula may be interpreted in relation to the human situation. The kula can represent any self-sufficient or autonomous structure manifested from the absolute. We have also seen that while the term kula can apply to the body, that is, the individual, it is more often found as applying to a family, the grouping of individuals. This may be understood as follows: each individual presents the appearance of an autonomous structure comprising body, mind, and personality. Nevertheless, the individual human being as a finite structure is not in fact a completely self-sufficient unit. In terms of the origin of this structure, it arises from the union of man and woman. In order to replicate itself, the finite body must be joined with another body. Male and female must unite. The united male and female represent a self-replicating staging point in manifestation from which the kula as body, or rather as human family, may perpetually renew and maintain itself.

Thus, for the tradition, it is especially in the union of male and female, that human beings physically embody the dyadic wholeness of Siva. It is no accident that sexual union represents an especially powerful instantiation of the cosmic processes of manifestation that result from the activation of the prakasa-vimarsa dyad. Similarly, the ritual of sexual union, the cakra-puja or sakti-cakra, seems to have been designed to resonate with the very foundational energies of the universe.

The Kaula lineage conceived of the secret ritual as a physical embodiment of the primordial energy nexus of Siva and sakti. The physical acting out of the circle of pairs surrounding the central pair in union replicates, on the physical level, the God and Goddess perpetually united and surrounded by the circle of powers. This ritual attempts to capture, magnify, and transmit the essential Emissional Power of the universe. It was thought that the powerful, liberating, and beneficent force of consciousness itself radiated outward from the central dyad of male and female in union. The reunited totality on the level of the body was seen as resonating with the totality inherent in each unit of manifestation, as well as with the a-kula, the unembodied totality beyond the inhabited and divided manifestational cosmos.

The kula, seen here as the unit of male and female, is a complete unit, is, then, a wholeness that is capable of replicating itself, and which thus
may be termed the divine family. This concept is often rendered by the term *yamala*, the twinned form. The Emissional Power is frequently referred to as the *Rudra-yamala*:

Therefore, the phoneme H, the *visarga*, is termed the *Rudra-yamala*, the Rudradyad, because it consists of both the supreme Siva and *sakti*, of the rest and activity which constitute the Union of Bhairava with his Beloved.  

The Heart is conceived as the site of the union of the two, whether the two be the primordial spiritual forces of divinity or two human beings. Thus the Heart may be rightly interpreted as the generative abode: we may even correctly speak of a genital Heart. In this connection, two terms, the *linga* and the *yoni*, require examination. In addition, the notion of *yoni* will lead us from the symbolism of the two to the three, with its stable geometrical form, the triangle.

**Linga**

In the *TA Abhinavagupta* describes the *linga* in the following way:

This *linga*, the Heart of the *yogini*, beautiful with bliss, generates an extraordinary form of consciousness, due to the union of the seed and the womb. All the hosts of divinities dwell, without any effort whatsoever, in this abode full of bliss, and their nature is an unfailing form of consciousness. Here shines the paradoxical potency of Bhairava which continuously expands and contracts, while Bhairava himself is beyond all expansion and contraction. The totality of all that is poured out by the streams of bliss which occur by the union of the *linga* with that (*yoni*), is continuously and perpetually renewing itself.

What is the meaning of the assertion that the *linga* is the very Heart of the *yogini*, the *yoginihrdaya*? This rather mysterious assertion links the most common emblem of Siva, the *linga* or phallic mark, with the Heart. It refers to the union of the *linga*, the phallic pillar of light, with the *guha*, the vaginal abyss of darkness, a union which occurs in the Heart.

The notion of the *linga* in the Heart may be read in at least three ways. On the cosmic level, the *linga* is the massed and powerful consciousness of Siva as he is about to release the universe into manifestation. We recognize here the Emissional Power of Siva which, continuously expanding and contracting, releases into being the seed-cognitions it harbors within itself. On another level, that of the yogic practice, the *linga* in the Heart alludes to the practice of meditative absorption, which will be clarified
when we explore further on the imagery of the cave (guha). Anticipating this discussion, we might initially read the process as guha-samavesa - absorption into the cave, where that phrase yields a dual meaning. On the inner level of tantric practice, it may be interpreted as alluding to the yogic immersion in the cave of consciousness. On the external level of tantric ritual, it may be seen as describing the ritualistic penetration of the phallus into the vaginal cave. This superimposition of meanings, it need hardly be said, is not accidental. Thus the yogini, the Goddess, is penetrated by Siva, has Siva as her very Heart, has Siva in her very core. Bhairava is the self of the Goddess, he is inseparable from her, he is perpetually united to her.

In a gloss on the term linga, Abhinavagupta underscores the cosmic level of interpretation of the notion of linga:

> All this is dissolved (Imam) in that and all this is perceived (gamyate) as reposing within that. Such is the characteristic of the Bhairava consciousness with its completely full powers.  

The true power within the Heart is the consciousness of Bhairava within which all is dissolved and on which everything else reposes. This power is the linga or true characteristic mark of the Supreme. This power, doubling back upon itself, expanding and contracting, pours itself out in streams of bliss. This emission is perpetually renewing itself, and in this way manifestation is continuously being maintained. The linga is the symbol of the expansive, creative force (virya, ojas). It also proclaims the withheld and unemitted semen of Siva, and of the yogin who takes Siva as his ideal. By imitating the supremely stable (dhruva) reality that abides beyond expansion and contraction, beyond emission, the yogin can empower his consciousness for the journey of return to Siva.

We can reconsider in this light a passage in which Abhinavagupta describes the nature of the power in the Heart:

> The power which consists of a sparkling vibration and which is in the Heart, by means of its own innate freedom, creates artificial divisions such as the various cognitions, a pot and so on. The power which is the noble Lady of the group, that is of the body, breath, happiness and so on, produces a state of pulsation and thus becomes the energy of the wheel of deities such as Brahmī, etc. The power whose form is the center of the center of the entire wheel of sense capacities and subtle conduits is of the nature of the linga and karnika, the place of birth.

The sakti that resides at the center of the center of awareness is said to have
as its nature the linga and the karnika. The term karnika literally means the "pericarp of a lotus." We have seen that the Heart is often spoken of in terms of a lotus flower. Thus, the choice of imagery, the linga and the karnika, as opposed to a more standard linga and yoni, is meant perhaps to underscore a reference to the cosmic birthplace, rather than a simple allusion to the vulva. Of course, the lotus and the yoni are also directly linked. In any case, we arrive at a symbolic complex that combines lotus/vulva/heart into a dense network of meaning. Let us now consider the notion of yoni in a more detailed fashion.

E, Yoni, Trikona

We can best approach the notion of yoni by recalling that the Heart is equated with the triangle (trikona). Abhinavagupta tells us:

O Lady with beautiful hips! The Heart is the subtle vibration of the triangle which consists of the incessant expansion and contraction of the three powers, and it is the place of repose, the place of supreme bliss. This very Heart is the Self of Bhairava, of that which is the essence of Bhairava, and of the blessed supreme Goddess who is inseparable and nondifferent from him.\(^{34}\)

This initially puzzling association links one of the names for the tradition, Trika or triple, with its most important symbol, the Heart. In fact, one of the important texts quoted by Abhinavagupta in his TA is entitled the Trika-hṛdaya. There is a deeper meaning lurking here, however. We have alluded to the identification of the Heart with the cave or abyss (guha). We have also seen the link made between the cave, the Heart, and the female sexual organ. It happens that in the Nagari script (as well as in the Kashmiri Sarada script), the vowel E looks very much like an isosceles triangle with its apex pointing downwards. This emblematic association with the female sexual organ causes the vowel E to become known as the trikona-bija, triangle-vowel, or yoni-bija, vagina-vowel. The Heart, the triangle, the yoni, and the vowel E, are all linked with the Goddess, with the sakti, with the female power of sexuality, fertility, and reproduction.

As the first of the diphthongs that emerge in the process by which the so-called lunar stations evolve out of Siva, the vowel E results from the union of the Supreme A or the Bliss A with the Will / . It is said to be "beautiful with the fragrance of the Emission.\(^{35}\)

As is so often the case with tantric symbolism, there are at least three levels of possible interpretation of the yoni: the level of cosmic manifestation, the level of ordinary life, and the level of the tantric-yogic practice.
Often, however, the level of symbolism of the cosmic manifestation and that of the tantric-yogic practice coincide. This occurs because often these two levels represent complementary aspects of the single process of manifestation, the former being applied in the direction of the emergence of manifestation and the latter being applied in the direction of the return of manifestation to Siva.

In terms of the yoni-bija, Jayaratha intertwines aspects of all three levels of interpretation when he gives this gloss on the meaning of the triangle:

The term trikona indicates this vowel's aspect of being the receptacle of birth, in other words the mouth of the yogini (yoginivaktra). It is there that the supreme power arises. As it is said: "when it shines forth from the triangular seat with a crooked form," and also "the triangle is termed bhaga, vagina, yoni, vulva, the hidden circle which stands in the middle with the energies of will, knowing and action forming each angle, and emitting the sound cincini." Even in ordinary life the place of birth is the place of the highest bliss because of the violent discharge associated with the production of the bliss of Emission.

The trikopa is interpreted on the level of cosmic manifestation when it is described as being composed of three powers, each forming an angle of the triangle. It is interpreted on the level of the tantric-yogic practice when it is lauded as the source of the powerfully salvational energy which is crooked (kutilarupini), a clear allusion to the kundalini energy. Finally, on the level of ordinary life, the trikona is both the place of sexual intercourse and birth.

The level of cosmic manifestation is very important here. In terms of the non-dual Kashmir Shaiva scheme of the female potencies or powers of Siva, each of the three sakti-s is respectively associated with a corner (kona) of the inverted triangle: the iccha-sakti, the willing or desiring of Siva; the jnana-sakti, the cognitive function of Siva; and the kriya-sakti, the active-creative function of Siva. This triad of powers is the triple function of the Heart of Siva, by means of which Siva is free to create, enjoy, and destroy the myriad universes that appear in the great ocean of consciousness. This triple function reduplicates on the level of ordinary life as our finite capacities for willing, knowing and acting.

We have already considered Somananda's analysis of the intermingling of these three powers in the Heart and his attempt to link the experience of balance between the three powers to everyday experiences, as in the case of receiving good news, or feeling unexpected fear. Somananda says:

When Siva is in the form of an absorption in the experience of his conscious beatitude to the exclusion of all else - in this state, indeed, He is at once will, knowledge, and action - then these three powers which are in their most subtle
form, are in a state of perfect union with Him. In this state Siva is freed from distinctions, resolved in His conscious beatitude, in His supreme form.\textsuperscript{37}

These three powers form part of another list of five powers, namely the power of consciousness (\textit{cit-sakti}), whose nature is light (\textit{prakasa}); the power of bliss, (\textit{ananda-sakti}), whose nature is freedom (\textit{svatantrya}); the power of will (\textit{iccha-sakti}), which is astonishment (\textit{camatkara}); the power of knowledge (\textit{Jnana-sakti}), composed of the capacity for conscious thought; and the power of action (\textit{kriya-Sakti}), which is the capacity to assume all forms.\textsuperscript{38}

Yet another way of dividing these powers, perhaps the one preferred by Abhinavagupta, is in terms of the first three vowels, A I U, which represent the powers of the Supreme, the Will, and the Opening. These are praised by Abhinavagupta as "the supreme effulgence of Bhairava, the power of the Supreme Lord in all its fullness."\textsuperscript{39} In fact, this triad is said to be the most basic configuration from which the pentadic classification arises. This pentadic classification in turn leads to the first triad we considered, that of the \textit{iccha}, \textit{jnana} and \textit{kriya sakti}-s. Abhinavagupta explains this process as follows:

Finally, these pentads are resolved back into the Ultimate, A. In this way, the Emissional Power expands with a form that extends from the lunar stations beginning with A, to the pentad of brahman. This is the wheel of powers of the Lord, of Bhairava, a wheel which is an uninterrupted continuous series. For the five powers of consciousness, bliss, will, knowledge, and action, which are made of the five elemental powers, are, in effect, the powers of consciousness placed in the triangle, namely the Ultimate, the Will and the Unfolding (\textit{A I U}), which then unfold into a five-fold division.\textsuperscript{40}

The triangle is the great secret of the Heart about which the Goddess asks to be enlightened.\textsuperscript{41} Abhinavagupta describes the triangle as the "undifferentiated state of the distinctions of the knower, known and process of knowing."\textsuperscript{42} We will consider later on the significance of this triad when we see it in relation to the fire, sun, and moon. In the following passage this same triad, as well as several others, is linked to the triangle:

The \textit{yoni}, which is triangular, is nothing other than this flower. The blessed \textit{bhairavinudra} linked to Paramesvara consists of the triangle, distinct and evident, of the perceived object, which is to say the sun, the moon, the fire, of manifestation, maintenance, and reabsorption, of \textit{ida}, \textit{pingala}, and \textit{susumna}, of lawfulness, unlawfulness, and both together. This triangle is called \textit{yoni}, source, matrix, womb, vagina, because it is the support of the womb which has a triangular form. As it is said in the \textit{Kubjikamata}, in the section that
treats the \textit{Khandacakra}: "Above the \textit{maya} is the great \textit{maya} (an intermediary \textit{tattva} between \textit{mays} and \textit{suddhavidya}), whose form is the triangle of bliss."\textsuperscript{43}

\textbf{Trisula}

Another important triangular concept is the \textit{trisula}, the trident, which is the weapon of Siva. This is also the name given to the fourteenth vowel, \textit{A U}. Here is Abhinavagupta's description of this vowel in the \textit{TA}:

\begin{quote}
It is for this reason that at this particular stage - the fourteenth - the three powers of willing, knowing and acting are all fully evident. In the \textit{Sri Purva}, the Lord calls this stage the trident. The teachers who disclose the truth have also termed this phoneme the unmanifest (\textit{niranjana}). The trident is thus nothing more than this triad of powers in a state of fusion and balance (\textit{loli-bhutam}). As a result of absorption in this trident the yogin quickly achieves a condition of being unmanifest.\textsuperscript{44}
\end{quote}

We have just examined a passage from the \textit{Siva-drsti} in which Somananda states that the Supreme, the most subtle form of Siva, occurs when these three powers are perfectly united with him in an undifferentiated fashion. Thus it is not surprising that the \textit{trisula}, which corresponds to the state of fusion of the three powers, should be termed the Unmanifest.

In the \textit{PTlv} Abhinavagupta puts the matter in a slightly different way. Since the power of action manifests itself fully at the stage of the trident, then of necessity, he says, the other two powers are also present there. This is also essentially what Jayaratha says in his comment to the passage of the \textit{TA} that describes the trident. As Abhinavagupta puts it:

\begin{quote}
The fourteenth vowel (\textit{A U}) abounds in the perfectly full ultimate (\textit{A}) and bliss (\textit{A}), and which is possessed of expansion (\textit{U}) and diminution (\textit{V}) - which are the body of the completely full power of action. The other two powers, the power of knowledge and the power of will, are compressed within that fourteenth vowel by means of the power of action.\textsuperscript{45}
\end{quote}

Further on in the \textit{PTlv} Abhinavagupta again emphasizes the inseparable connection of these three powers:

\begin{quote}
Since, in reality, that state of mere being is not different from the true nature of such powers - what remains is the true nature of the power. That power is either will, action, or knowledge, because nothing at all can appear without reposing on the power of such self-referential consciousness which is "I will," "I act," and "I know." In the thought "I will" are intermixed the three powers -
\end{quote}
and in the same way in "I know," and "I act," because they are inseparably connected. Therefore, that which is becoming manifest appears as reposed in the own-nature which is composed of the triad of powers. The true nature of this triad of powers is one, namely freedom, and because of this freedom, a true body made of two dots, formed of two knots, one above and one below, a body of made of consciousness, whose nature is the supreme deity, Bhairava.  

In a later chapter we shall analyze the two important mantras associated with the Heart. It is not out of place here to remark, however, that it is no accident that the central vowel in each of these mantras is a triangular vowel: the yoni, E, is the vowel in the so-called Heart of dissolution (hrdaya-samhara), and the trisula, AU is the vowel in the so-called Heart of manifestation (hrdaya-srsii). The vowels form the central, pulsating core of the mantras they animate, and stand in both cases for the triad of powers that abides in the Heart, the three rulers (TriSika-s) of the title of the PItv. We shall now turn to a consideration of the notions of vibration (spanda) and Emission (visarga).
The Heart: Vibration and Emissional Power

The Heart as Vibration: Spanda

In the non-dual Kashmir Shaiva tradition the notion of spanda, vibration, goes back to two early figures, Vasugupta and Kallata. While Abhinavagupta never seems to have commented on the texts of the Spanda branch composed by these two masters, the term spanda occurs frequently in his writings. For example, when he clarifies the nature of the vital energy that empowers individual life he says:

The power of the vital breath animated by an effort, an activating, inciting exertion, and by an internal desire, is variously termed the vibration (spanda), the trembling light, the repose, the life, the Heart, the illumination.¹

In the same text he gives a clear definition of spanda:

The nature of such a consciousness is its capacity for self-referral, and because of that, there always arises a spontaneous sound (dhvani) which is termed the supreme, the great Heart. That self-consciousness in the Heart in which the entire universe without remainder is dissolved, present at the beginning and at the end of perception of objects, is called in the authoritative texts the vibration (spanda), and more precisely, the universal vibration (samanya-spanda), and its nature is an overflowing in the Self. For that vibration, which is a slight motion of a special kind, a unique vibrating light, is the wave of the ocean of consciousness, without which there is no consciousness at all. For the character of the ocean is that it is sometimes filled with waves and sometimes waveless. This consciousness is the essence of all. The insentient
universe has consciousness as its essence, because its very foundation is
dependent on that, and its essence is the great Heart.²

Abhinavagupta begins by underscoring the inherent capacity for self-referral (vimarsa) that is, according to the tradition, the essential characteristic of consciousness. This doubling back of consciousness on itself does not represent a separate moment in consciousness, but is rather a continuous and inescapable component of consciousness, intrinsic to the sheer appearance of consciousness (prakasa). This self-referring capacity of consciousness causes a spontaneous sound that is equated with the great Heart. It is in the Heart that the entire universe is dissolved in a self-consciousness which is known as the spanda, vibration. The specific nature of this vibration is an overflowing in the Self. This overflowing creates a very slight motion, a peculiar vibration of the light of consciousness, which in turn sets up the wave function of consciousness. Abhinavagupta emphasizes that these waves are an essential component of the fundamental existence of consciousness.

In this passage, as well as in many others, a series of richly descriptive terms occurs that conveys the subtle motion within the absolute reality that is termed spanda. The terms sphurana, sphurita, and sphuratta all derive from the root sphur, and convey a sense of something that throbs, trembles, quivers, or twitches. The meaning of these terms is complicated by the additional semantic component of light: that which throbs is also a light. In addition, sphurana can mean flashing, glittering, gleaming, glistening, twinkling or sparkling. From these meanings we can derive the simpler and less descriptive sense of something that shines, and therefore something that is evident or manifest, something that "is."

The term prakasa, which means "to shine forth," may be simplified to the rather undescriptive "that which appears." So also sphurita, quivering, glistening, sparkling, may be simplified to the rather unimaginative "that which is" or "being." However, while these renderings correctly transcribe one of the denotations of these terms, they also succeed in stripping them of most of their descriptive power.

Terms such as sphurana, prakasa, and many others were chosen by the tradition to convey experiential elements of the yogic experience. They attempt to render some of the vividness and mysterious fascination of the process of s&dhana, of the experiences of entrance into the supreme. It seems that the tradition chose such a powerfully descriptive vocabulary precisely in order to emphasize what may be termed the "yogic-descriptive" aspect of the tradition. This language may be contrasted with the vocabulary prevalent in the more philosophical aspects of the tradition. That vocabulary, though no less complex nor less densely packed with semantic
components, seems to be designed to highlight what may be termed the "logical-ascriptive" aspect of the tradition. The yogic-descriptive and logical-ascriptive perspectives form two distinct, though often intermingled, aspects of the non-dual Kashmir Shaiva tradition.

Another descriptive term, *uccalana*, rendered as "an overflowing," conveys the sense of a continuous dynamism within the absolute reality, a perpetual movement toward itself. This internal dynamism serves as the source for the external movement that results in the process of manifestation. The term *dhvani*, rendered as "sound," conveys the internal resonance, the primordial hum that is set up by this movement within the Ultimate reality. *Udyoga*, an activating inciting exertion, shows the internal power of the absolute reality, a power silently amassing for a ferocious unleashing, a power tremulously experienced by the yogin who enters into the majesty of Bhairava.\(^3\)

The silence of the Supreme is shot through with a creative tension, a primordial urge, an impelling force. This force is the *sakti*, the power of the Ultimate, which sets up an agitation (*ghurnana*), even a disturbance (*ksobha*), which is responsible for the wave motion within the absolute. Thus, the absolute is continually arising into waves which create the slight and imperceptible movement or vibration that characterizes consciousness, and which allows consciousness to be the foundation and essence of all manifest reality.

It is important to emphasize that this movement occurs within the fundamental core of the Ultimate: it forms the essential feature of Ultimate reality according to the non-dual Kashmir Shaiva tradition. It can in no way jeopardize the status of the Ultimate as absolute. To wish to define the Ultimate reality as a silence that transcends all characterizations would be to distort and demote the absolute into a powerless and useless ultimate. Such an ultimate would be totally appeased (*Santa*), but would also be incapable of serving as the essence of the finite. The *spanda*, the internal movement of the Heart of Siva, rescues the absolute from a kind of pristine but static inertia.

Abhinavagupta describes the essential characteristic of the *spanda* as a contraction and expansion (*samkoca-vikasa*) as well as an opening and a closing (*unmesa-nimesa*). For example, in his P77v he says:

O Lady with beautiful hips! The Heart is the subtle vibration of the triangle which consists of the incessant expansion and contraction of the three powers, and it is the place of repose, the place of supreme bliss. This very Heart is the self of Bhairava, of that which is the essence of Bhairava, and of the blessed supreme Goddess who is inseparable and nondifferent from Him. Now consciousness, which is formed of the Ultimate (*A*), vibrates with a seed vibration
in the two extreme points of the first vowel \((A)\), two points whose nature is that of reposing in their own-nature. And because of the power of that vibration, consciousness, which is composed of the essence of all, becomes in the central point, the impulse toward the manifestation of the distinct and different cognitions.\(^4\)

Clearly, the internal motion of expansion and contraction permits the impulse of *spanda* to manifest the variety of cognitions apparent in the manifest world. The unbroken unity of the non-dual can be animated and even polarized by an internal movement that is intrinsic to it. Yet this movement, the *spanda*, is incapable of reducing the non-dual, of rendering it anything less than non-dual. The essence of the absolute non-duality is that it harbors within it a rhythm, a pendulum that is able to swing the full spectrum of its reach without sundering the absolute.

All of these notions are intrinsic to an understanding of the Heart. This internal urge of the Heart generates the motor dualism of the Heart; we see it in such polarities as *prakasa-vimarsa, samkoca-vikasa, unmesa-nimesa, vikalpa-nirvikalpa, duhkha-sukha, bhukti-mukti, and jnana-ajnana*. In addition, this motor dualism constitutes the essential element of the *visarga*, the Emissional Power, which we will consider in the next section. The Ultimate is *spanda*: it vibrates, it expands and contracts; it manifests and reabsorbs; it is full of waves and waveless; it is full of bliss and yet suffering occurs; it plays a game of hide-and-seek with itself in which ignorance alternates with knowledge, and in which enjoyment and liberation can coincide.

In a passage which explains the Heart-mantra Abhinavagupta says:

> This is the great Heart, the triangle, the Ultimate, filled by its three parts each of which is higher than the last, that is the phonemes \(S, A, U\), and H. The great Heart has as its basis the never obstructed capacity for carrying out hundreds of openings and closings of the All, as shown by the power of contraction and expansion whose essence are the functions of appearing, that is blazing forth, and disappearing, that is dissolving down. This Heart thus has three parts or portions.\(^5\)

The reference to the three parts of the Heart specifically refers in this case to the three phonemes of the Heart-mantra, which will be analyzed in a later chapter. In a more general sense we can also see here the notion of triads growing out of these pairs: the Siva-Sakti dyad always takes place on the background of the illimitable infinity of the One. We have considered this in reference to the notion of *madhya*: the omnipresent center acts as a stage or backdrop against which the *two* can interact. The *anuttara*
forms that One which must be understood as underlying the two, and in this way the triplicity of the Heart arises.

The notions of contraction and expansion of the Heart are directly related to the spiritual conditions of ignorance or enlightenment of the individual soul. Abhinavagupta describes this relationship as follows:

When the Heart is in a state of contraction the awakened awareness of the individual self is in fact a state of ignorance. But when this contraction ceases to function, then the true nature of the Self shines forth.\(^6\)

According to the P77v, the process of bringing the contraction of the Heart to an end is effected by the divinities of Bhairava, who manipulate two opposing vibrations:

The initiated one knows this supreme knowledge characterized by the Heart and which is given by the divinities of Bhairava who are within the Heart and who bring an escape from the vibration of manifestation which leads to an obscuring of the Self, and are rather directed towards the supreme vibration which consists of the opening of the Self. These same divinities destroy the chief bond which is the state of contraction.\(^7\)

Abhinavagupta differentiates here between a "vibration of manifestation" (prapanca-spanda) and the "supreme vibration" (parispanda). The first obscures or, more literally, closes (nimilana) the Self, while the second opens, or discloses it (unmilana). The terms unmilana-nimilana generally refer to an opening and closing of the eyes, an image that is particularly appropriate to the concrete experiential nature of the knowledge aspired to here.

There is a dialectic operating between the notions of expansion and contraction, of opening and closing. Abhinavagupta says:

In the two conditions, the inner and the outer, there exists a vibration of consciousness whose nature is the three powers, a vibration which is both universal and particular, which is always in the process of expanding and contracting because it so wishes to appear even though in reality it is beyond all expansion and contraction. He whose final aim is internal and whose vision is directed outwards attains the highest realization.\(^8\)

While the supreme reality can initially be discovered by the introvertive gaze, its definition as "omnipresent" assures that it will also eventually be perceived as resident even in the external objects. The initial process for realization involves the practitioner closing the eyes to the finite realities that constitute the external world. In this way the practitioner is open
to the inner world of the Self. This technique for realization mirrors and reverses the process by which Siva first manifests the external world by closing his eye of knowledge.\footnote{9}

As the practitioner advances, however, he is invited to a higher spiritual posture. Here he must remain open to the inner world of the vibratory Self, and yet at the same time open himself again to the external, finite realities. As his practice of this new and apparently contradictory posture advances, he attains a balanced steadiness and is not shaken from his internal absorption even when fully open again to the external world. The final attainment in this posture, known either as the \textit{khecari-mudra} or \textit{bhairavi-mudra}, consists of the identification of the inner vibrating Self as constituting the visible essence of the external finite realities.\footnote{10}

Ksemaraja clarifies this process of alternation between inner and outer:

\begin{quote}
'Pratimilana' means both inward awareness of the Divine \textit{(nimilana)}, and outward awareness of the Divine \textit{(unmilana)}. He now sees the universe over and over again with an awareness in which the residual traces of difference have completely vanished. The yogi has an experience in which he is inwardly absorbed in the Supreme Divine consciousness \textit{(nimilana)}; again when he turns towards the universe, he experiences it as the same as his own essential Divine consciousness \textit{(unmilana)}.\footnote{11}
\end{quote}

The play between opening and closing, between expanding and contracting, is the essential characteristic of the Heart. The Heart itself constitutes the highest method for reaching the condition of non-duality which finally unifies the open and the closed, the expanded and contracted.

It is the Heart whose nature is a vibration which constitutes the supreme method for achieving the highest non-duality which consists of a universal grace. For the nature of the self-referential character of the consciousness which composes the awakening in the Heart is that it is an astonishment brought about by the total fullness of consciousness.\footnote{12}

There are two curious terms that relate to the notion of the expansion and contraction of the Heart and that occur in close proximity to each other in the \textit{TA}. The first is the obscure term \textit{matsyodara}: literally, "the belly of the fish." This yogic term in all probability attests to the links we have explored in Chapter 2 between the Kaula lineage and the Matsyendranatha-Gorakshanatha tradition of Hatha-Yoga. Abhinavagupta says:

\begin{quote}
There on the level of the highest \textit{kundalini} there is the Emissional Power which is beautiful because it contains within itself the vibration, there the yogin should repose devoted to the condition of the belly of the fish.\footnote{13}
\end{quote}
The precise significance of the term *matsyodara* is unclear. Eliade comments that:

> According to Bagchi, the name Matsyendranath indicates the trade of "fisherman." But still to be explained is the entire symbolism of "fish" and "fisherman," which occurs in innumerable cultural contexts and always in connection with a "revelation," or, more precisely, the passage of a doctrine from a state of oblivion or "eclipse" to the state of complete manifestation.\(^{14}\)

On a less technical level, the notion of the belly of the fish conveys, like the Heart, an absorption, and perhaps even a swallowing, into an enclosed and mysterious receptacle. Though by contrast with the external world it may appear dark, a sojourn in this enclosure grants the *yogin* an enlightening and revealing knowledge.

In the verse that follows in the *TA* we encounter another puzzling animal reference:

> Just as the she-ass and the mare, so the *yogin* having entered the temple of bliss which is his own abode, and which is composed of expansion and contraction, rejoices in his own Heart. In the same way, he should attain the Bhairava pair which increase through expansion and contraction, and which abounds in the multitudes of all beings which are incessantly manifested from that and reabsorbed back into that.\(^{15}\)

While Jayaratha glosses this passage in terms of a specific sexual allusion, the precise significance of the comparison to a she-ass or mare remains unclear. It cannot be dismissed as an anomalous reference because it recurs in the P7V.\(^{16}\)

**Visarga**

The notion of *visarga*, translated as Emissional Power, constitutes a central and essential component of the meaning of the Heart.\(^{17}\) It might perhaps be called the most "tantric" concept in Abhinavagupta's thought, for it combines a great number of the essential conceptions of the non-dual Kashmir Shaiva Tantra. This assertion might be initially puzzling to anyone familiar with Sanskrit but unfamiliar with the non-dual Kashmir Shaiva tradition. For the Sanskritist the term *visarga* is a familiar grammatical term commonly encountered in Sanskrit phonology as naming the pure, voiceless aspiration. How this apparently simple grammatical concept becomes a crucial and complex component of the Shaiva tantric conceptions represents an interesting historical problem which cannot
be pursued here. Nevertheless, an examination of the term *visarga* can shed important light on the theoretical bases of the Shaiva Tantra.

Let us begin our examination of the notion of *visarga* by quoting Abhinavagupta's initial exposition of the term in the *PTlv*;

The knowing subject has as its essence the supremely subtle vibration of the Self. It is characterized by knowledge and action, and its nature is one of contraction and expansion, that is, opening and closing. It is not like a pot, and so on, which is inert, limited and stationary. The more this combination of expansion and contraction becomes evident in the vibration of the Heart, of the triangle, etc., the more does the subjectivity become elevated, until it reaches the consciousness of Bhairava. Conversely, the more the expansion and contraction diminish, the more does the subjectivity fall until it becomes inert like a stone etc. This expansion and contraction is the characteristic of the *visarga*, whose essence is freedom, that is, the very power of the Lord, of the Ultimate. Therefore, the phoneme *If*, the *visarga*, is termed the *Rudra-yamala*, the Rudra-dyad, because it consists of both the supreme Siva and *sakti*, of the rest and activity which constitute the union of Bhairava with his Beloved.

In Abhinavagupta's teachings about the Kaula method, the term *visarga* has a wide signification. Here, it comes to name that power (known alternatively as the *kauliki sakti*, the Devi, the *nada*) that is responsible for emitting the universe in all its glorious variety. Equally important, it names the power that must be harnessed by the tantric yogin to continue the arc of manifestation as it doubles back on the journey of return to Siva. This power may be thought of as an impelling force (*iccha-sakti*) that at one and the same time continuously pushes everything out into being, and continuously absorbs it all back into Siva. This power in the Heart, which is the Goddess, and which is named the *visarga*, is at once centrifugal (*pravrtti*), that is, Emissional and expansive, as well as centripetal (*nivrtti*), that is, absorptive and unitive.

This expansion and contraction forms a kind of "alternating current" of spiritual power which may be tapped by the yogin in various ways. The "expansive" mode may be employed for the further manifestation of desires in the external or subtle worlds (*bhoga, phala*), or, during the farther reaches of the *sadhana*, for the establishment of the experience of non-duality even in outward perceptions. The "contractive" mode connects the yogin to the inwardly ascending force that effortlessly propels the yogin to rest in absorption (*samavesa-visranti*) in his own unbounded, original consciousness. Here, the infinitely fast vibration of consciousness allows the re-emergence of the state of Bhairava, the state of liberation in this very life. It is an interesting part of the dialectic of reversal of the
visarga that the "expansive" mode mentioned above may, from another perspective, be termed "contractive," and vice-versa.

Abhinavagupta calls the visarga the Rudra-dyad. On one level, the double nature of the visarga clearly reflects its graphic representation in the Nagari script: two dots placed vertically one above the other, sometimes accompanied by a straight vertical line just to the left of the two dots. The single dot, bindu, which is the phoneme that precedes the visarga in the enumeration of the vowels, is said to represent the finite, knowing subject. The visarga, which is made up of two bindu-s, points to the inherently self-referential capacity of consciousness. It is in this sense that the visarga represents the freedom of consciousness, the vimarsa, which is the most important characteristic of consciousness. Consciousness is not like a rock crystal that passively reflects all that appears before it. Rather, the freedom and spontaneity present in consciousness allow for a continuous process of self-consciousness (svasamvedana) as well. The visarga represents the basic component of the sadhana in which the finite consciousness is doubled back on itself. At first, as this process occurs, consciousness simply encounters more and more of its own contents. Finally, a powerful moment of recognition (pratyabhijna) occurs when the beam of consciousness becomes conscious of itself and nothing else. This is termed the entrance into the "fourth," turiya, and here the condition of simple nirvikalpa ensues.

The visarga, which is tentatively translated as the "Emissional Power," brings together all the various levels of the tantric cosmos: the divine level of outward cosmic manifestation, the human level of inward spiritual absorption, and the ritual level on which the human becomes divine. In terms of language, the visarga functions both as a phoneme, the outwardly explosive aspiration of breath, and as a component of numerous mantra-s, where its function is rather to cause the inward cessation of the vital breath. On the level of ritual, it resonates with the kula-yaga, the secret ritual taught in veiled terms by Abhinavagupta, where it may signify the orgasmic expulsion of the life force; or, on the level of inner, tantric yoga which is part of the same ritual, it coincides with the blissful inward force, the kundalini. In each of these environments, the polar, dyadic nature of the visarga is clearly at work.

We have seen that the visarga has an essential role to play in the tantric formulations of the non-dual Kashmir Shaivas. Its meanings can be summarized by the following: (1) It is a phoneme, the last of the vowels, which is said to be genetically present in all the other fifteen vowels. (2) As such, it forms the most important part, the immortal part, of the sixteen parts of the moon, the so-called lunar stations with which the vowels are equated. (3) The visarga is said to be located in the Heart. This location is of extreme
importance for the process of experiential replication in the Kaula tradition, the tradition of the Embodied Cosmos. In brief, the location of the visarga in the Heart symbolizes the constant availability, at the core of the yogic body, of that force which allows the process of enlightenment to unfold spontaneously. (4) The visarga in the Heart is the very power of consciousness itself and, according to the non-dual Kashmir Shaivas, the highest power of consciousness is its freedom. (5) The visarga expresses the freedom of the highest reality, which literally indulges in a sport of hide-and-seek, with itself. In its rhythmical expansion and contraction, the visarga functions on the cosmic level to manifest the multiple realities that emerge from Siva. In fact, these manifestations never really emerge from the Ultimate; instead, they take place within it. The Ultimate is, in a very real sense, hidden within the manifest: the infinite is present within the finite. The process of the tantric sadhana, then, involves the search for the supreme reality, which, during the nirvikalpa state, is located first in the Heart, in the deepest recesses of consciousness. The force that allows this condition to arise is the visarga, the very same power that initially brought about the process of outward manifestation. (6) The visarga functions on all levels, from the cosmic to the human. There are moments within moments of its functioning, cycles within cycles. The entire conception of cyclic time can be seen as an expression of the functioning of the visarga. (7) The visarga functions as part of the ritualistic symbolism of sexuality, of the emission of seed, of the union of a couple or pair. There is no denying that this is one meaning of the term. However, it is important to emphasize that if we reduce the notion of visarga simply to sexual orgasm or ejaculation we commit an egregious error. Certainly, there are passages in the TA in which, in one of its meanings, the term visarga may properly be translated as ejaculation. However, even in these passages, to insist that this is the only meaning of the term damages the subtlety of the entire tantric teaching. Visarga is the creative potency of the Ultimate. Undeniably, this creative potency expresses itself in one of its many manifestations as the force and power of human sexuality. The visarga that the practitioner wishes to attain, however, represents an experience of the total and unencumbered potency of the Ultimate itself. In the final analysis, the notion of visarga is not, at least originally, a philosophical concept. In order to understand it we must recognize its concreteness. It does not function as an abstraction in a system of thought. It is rather a powerfully descriptive summation of the culminating experience of the tantric sadhana. Let us now turn to analyze this notion in more detail as it occurs in three central passages in Abhinavagupta's writings: the PTlv, the MVv, and the TA.

In the PTlv Abhinavagupta devotes the longest commentary that
he writes on any of the sloka-s to an analysis and exposition of the triple visarga. He employs the traditional non-dual Kashmir Shaiva division of para - highest, aparā - lowest, and parapara - intermediate, to categorize the visarga. The para visarga-Sakti comprises the manifestation of the first fifteen vowels. The fifteenth vowel is the bindu, which corresponds to the finite knowing subject. As we have seen, the vowel visarga is not counted in this list because it is generically implicit in each of the other fifteen vowels. These fifteen vowels are also known as the "lunar stations" because they structure and fulfill the "moon of awakened consciousness." The para visarga-sakti corresponds to the manifestation within Siva of the potentiality for both the finite, limited awareness as well as the structure that makes possible the completely fulfilled enlightened consciousness. Thus, in so far as Siva is counted as one of the thirty-six tattva-s, he is composed of these sixteen vowels from A to H.

The appearance of knowable objects (vedyollasa), which constitute the lowest or aparā visarga-sakti, occurs next. While the para visarga-sakti is linked to the supreme, the anuttara, A, the lowest visarga is said to occur in will, iccha, I, and domination, isana, I. As Abhinava-gupta describes the process:

Now there occurs the appearance of knowable objects, which takes place in will (/) and domination (I). As knowable objects begin to appear, begin to separate themselves, there occur, on the gross level, the five gross elements and, on the subtle level, the five subtle elements. This results in ten principles, namely: earth, water, fire, air, space, smell, taste, form, touch, and sound. This is the manifestation of the knowable objects. At the same time, the sense capacities are being manifested as instruments of cognition. That is to say, the five action-capacities, namely, sexual, excretory, ambulatory, grasping, and speaking, in which the power of action predominates; and the five sense-capacities, smelling, tasting, seeing, touching, and hearing, in which the power of cognition predominates.

The five gross elements (mahabhuta-s), the five subtle elements (tanmatra-s), the five sense-capacities (buddhindriya-s), and the five action capacities (karmendriya-s) all appear as part of this lowest visarga. This does not conclude the task of this lowest visarga, however. The finite self that will move within the world of these objects is yet to be structured. Abhinava-gupta continues:

Then, when by gradual degrees, the aspect of the knowable objects begins to diminish, the perceiving aspect begins to manifest itself, namely: mind, egoity, intellect, primordial materiality, and individual consciousness. Thus the principles beginning with "earth" and ending with "individual consciousness"
correspond to the series of phonemes that run from K to M. The individual consciousness, even though it is a limited perceiver, is here reckoned as belonging to the group of knowable objects. For without it, who would perceive the objects of knowledge beginning with "earth", etc.? Such is the nature of that which appears as the knowable objects.²⁷

It is interesting to observe that up to this point the lowest visarga-sakti corresponds exactly to the traditional list of twenty-five tattva-s of the Samkhya. By including the purusa among the "knowables", however, Abhinavagupta has undermined the primary distinction in the Samkhya between the pure, contentless consciousness (purusa) and the prakrtic structure of materiality.²⁸ Abhinavagupta does not argue the point at length in this commentary; however, he does present his case against the Samkhya in the TS.²⁹ From what he says there we know that in the above passage he is deliberately subverting this crucial Samkhyan distinction.

There is more to this lowest visarga-sakti. In order to understand the role of the sheaths (kancuka-s) we must understand the problem that they attempt to solve. We know that the fundamental division in the Samkhya system occurs between the purusa and the subtlest of the prakrtic evolutes, the buddhi. The Samkhya is a rigidly dualistic system and it postulates an irreconcilable difference between the nature of consciousness and the material evolutes. This distinction, however, which is so primary to the whole structure of the Samkhya, also creates what is perhaps its thorniest problem. Briefly, as a consequence of this distinction it is difficult to explain how the finite self (the linga-sarira) can be said to be conscious in any sense of the term.

The non-dual Kashmir Shaiva tradition must face a kind of mirror image of this problem. The tradition postulates a radical non-dualism in which Siva, the infinite consciousness, is the totality of all that exists. On these terms it is difficult to account for the continued maintenance of the individual soul as a contracted structure. If the finite self is, in its essential nature, infinite consciousness and omnipotence, how do we account for its existence as limited and bound? The tradition does not postulate a dualism in its list of tattva-s, as does the Samkhya, which would allow it to set up a natural distinction and difference between Siva and the finite self.

The problem of distinguishing the Ultimate from the finite self in non-dual systems is by no means new, or restricted only to the non-dual Kashmir Shaiva tradition. It is taken up and receives a number of solutions in different traditions. As part of the non-dual Kashmir Shaiva manner of dealing with this problem it superimposes on the Samkhya list of twenty-five principles a scaffolding of the so-called sheaths or kancuka-s. There
is some variation as to the number and names of the sheaths. In the PTrV there are four of these and their function is to maintain the finite self suspended in the middle of things, not allowing it to sink to a state of total inertia, while at the same time not permitting it to rise up to the condition of Bhairava. In effect, the sheaths function as a kind of technical expansion of the bald statement that the finite self is maintained in its condition because of the will of Siva. As Abhinavagupta describes the process:

The mass of knowable objects, without abandoning their state of being knowable objects, operate to unify the two different aspects: knowable object and limited knower. The principles engaged in this unification are: kala, formed of air, which impels and consists of a limited capacity for action; impure knowledge, formed of fire, which illuminates and consists of a limited capacity for knowing; maya: formed of water, which satiates; the power of attachment, expressed in the verse by the word Indra, formed of earth, which consists of intense affection, and is by nature a stopping, an immersion.

These are the four powers that maintain the individual soul resting in the middle like Trisanku, which otherwise would fall into the condition of complete inertia like a rock, etc., or would ascend into the sky of consciousness like the supreme Lord. In either case, in the absence of the finite knowing subject, there would be no knowable objects, nor would there be contraction and expansion, because without contraction, expansion is not logically possible. This is absurd, because the entire universe, that is, the manifestation of the knowable object or the manifestation of the corresponding knower, is projected by the Emissional force which is precisely expansion and contraction.

Abhinavagupta is describing four sheaths. Kala, whose form is related to air, appears to be a force that sets things in motion. The idea seems to be that Siva reduces himself to a condition of deep sleep (suptasthanin) in which he is incapable of anything. The sheath of kala then restores to him a limited capacity for action. The impure knowledge (asuddhavidya), said to be formed of fire, restores a limited capacity for knowledge. The sheath of attachment (raga), linked to earth, restores a finite capacity for willing. However, the force of will in the individual does not seem to be linked to freedom as it is in Siva, but has been deformed into an intense attachment in which the finite self is totally immersed and suspended. The maya, linked to water, functions as the material cause of all that will manifest itself. It is said to cause fullness (apyayika) because it brings to fruition that which is waiting to be manifested.

Abhinavagupta continues by explaining why the power of space (akasa-sakti), the fifth element, is not counted in this list:

The power of space plays no role in sustaining the finite subject. For the
power of space is inherent in the individual soul as the true subjectivity, at once empty of objects and providing a place in which objects may be known. This is the Emissional Power in its lowest form.\[35\]

In the TS the list of sheaths is extended to six, including the four listed above as well as the sheath of time (kala) and that of necessity (niyati).\[36\] It is difficult to know why there is no mention made in the PTIv of these two. In any case, whether the sheaths are counted as four or six, we see that the \textit{apara visarga-sakti} consists of the traditional list of twenty-five \textit{tattva-s} of the Samkhya to which have been added the list of the sheaths. This is also known as the impure-path (asuddhadhvan).

Now Abhinavagupta describes the intermediate manifestation, the \textit{parapara visarga-sakti}, which corresponds to the so-called pure-path (suddhadhvan):

When the aspect of objectivity begins by degrees to be concealed, and the form of consciousness begins to unfold, then to that degree there occurs a Firmness, an increasing fullness of the form of consciousness; a union with its own light, a vibration which is characterized by the attainment of supreme freedom. Everything is then thoroughly pervaded by the form of consciousness. The expression "the pentad of brahman" refers to the five phonemes \textit{S} to \textit{KS}, which pervade, fulfill, cause to expand the Self - and they relate the five principles to Vidya, isvara, Sadasiva, Sakti and Siva; they are formed of the subtle earth, water, fire, air and space, and correspond to the five faces of Siva: Sadyojita, Vamadeva, Aghora, Tatpurusa, and Isana. This is the Emissional Power in its intermediate form.\[37\]

The pentads that make up the intermediate \textit{visarga} correspond to the pentad of \textit{Sakti-s}: the principle of Siva corresponds to a prevalence of the power of consciousness (\textit{cit-sakti}); the principle of Sakti corresponds to the prevalence of the power of bliss (\textit{ananda-sakti}); the principle of the eternal Siva (Sadasiva) corresponds to the prevalence of the power of will (\textit{iccha-sakti}). Abhinavagupta states that the power of will consists of a state of internal assent in which there is a balance, a condition of equilibrium between knowledge and action. The principle of the Lord (Isvara) corresponds to a prevalence of the power of knowledge (\textit{jnana-sakti}). Finally, the principle of the pure knowledge (\textit{suddhavidya}) corresponds to the prevalence of the power of action (\textit{kriya-sakti}).\[38\] Abhinavagupta insists, however, on the relationship of all of these pentads to the Supreme.

Finally, these pentads are resolved back into the Ultimate, A. In this way, the Emissional Power expands with a form that extends from the lunar stations
beginning with A, to the pentad of brahman. This is the wheel of powers of the Lord, of Bhairava, a wheel which is an uninterrupted continuous series. For the five powers of consciousness, bliss, will, knowledge and action, which are made of the five "elemental" powers, are, in effect, the powers of consciousness placed in the triangle, namely the Ultimate, the will and the unfolding (AIU), which then unfold into a fivefold division.\(^39\)

We see that manifestation, from its origins in the Supreme to its reabsorption into the Supreme as the pentad of brahman, is a display of the power of Siva and indeed is termed the sakti-cakra, the wheel of powers of the Lord. This is the entire display of the unfolding of the triple visarga-sakti, which manifests the thirty-six principles. These principles together constitute the manifestation.

In the PTv and elsewhere Abhinavagupta sets up a complicated correspondence between the thirty-six tattva-s and the fifty phonemes.\(^40\) This is accomplished by setting the sixteen vowels as equal to Siva. The intermediate visarga then, without sakti, accounts for three phonemes, the six sheaths take up six more, and we are left with five pentads of consonant mutes, each related to one of the pentads of the twenty five tattva-s that remain.

The process is further complicated because this entire manifestation may be understood as itself occurring on four levels corresponding to the four levels of speech. First, the process of manifestation is harbored within Siva in a completely undifferentiated form, as nondifferent from him. This corresponds to the para vak. There then occur, as these principles begin to manifest, two intermediate levels corresponding to the levels of pasyanti and madhyama. Finally, the full-fledged manifestation of the ordinary tangible world of name and form takes place. On each of the first three levels (that is, excluding vaikhari) the phoneme that corresponds to each particular tattva is different.

Setting aside the details of the process, we can see that there is a kind of dialectic at play here that reflects the dual nature of the visarga. Examined from the point of view of Siva (or of a liberated being), the entire manifestation in its most concrete form has never really departed from Siva; it has never sundered the absolute reality. The entire play of manifestation occurs safely ensconced in the bosom of the Supreme. It is a coagulation of forms that in their essence are nothing more (or less!) than absolute consciousness:

Therefore, all this is at first formed of an undivided self-referential consciousness. Because of an act of self-divided consciousness, whose nature is an awareness of distinctions, it assumes the form of fifty cognitions which attain
the state of being objects, and thus the group of external objects arises. The
life of these principles results precisely because they are essentially moments
of conscious cognition. This is the form of the \textit{matrika}.\textsuperscript{41}

Here we encounter the name given to the assemblage of fifty phonemes:
\textit{matrika}. This name, as Abhinavagupta's comment implies, reflects the
ultimate status of the fifty phonemes as acts of consciousness (\textit{paramarsa})
held within the absolute consciousness of Siva. The term resonates with
the notion of the Mother, the divine source or origin, the creative matrix.
It also calls to mind the notion of the finite knower, the \textit{mayapramatra},
who arises out of this divine matrix to engage in the triple relationship
of knower-known-knowing, \textit{matr-meya-mana}.

Abhinavagupta continues to insist that manifestation really occurs
within the Supreme:

Everything whatsoever which is said in the secret books sacred to Siva-Rudra
etc. arises from this reality. That form indeed, which bestows the lowest and
the highest powers, all that is obtained in the thirty-six principles. Self-
referential consciousness constitutes the life of those thirty-six principles.
The cognizable objects which are the inert aspects form, so to speak, its body.
That consciousness is found in the blessed Goddess, and therefore she is able
to bestow everything. This is the threefold manifestation, which has the
phoneme A as its root, and ends in the phoneme KSA. That manifestation
is in the abode of the Ultimate A, has its beginning in the Ultimate A, and
finally therein comes to repose in the very Siva. Therefore, by that knowledge,
the true nature of the Ultimate, of the Vibration, comes to be well known.
Which is to say, that the Ultimate is only that, i.e. the entire \textit{srsti} is really only
the Ultimate A. Thus, the Power which abides in the Heart is, above all,
formed of an undivided self-referential consciousness. Then, that Power,
by its own innate freedom formed of the Ultimate A, turns itself into distinct
cognitions whose form is the \textit{kaulikasiddhi}. This has been decisively ascer-
tained in all the \textit{tantra-s} such as the \textit{Siva, Rudra. Rahasya}, etc.\textsuperscript{42}

The entire manifestation is nothing other than the Ultimate. Abhinavagupta
puts this in a slightly different way in the \textit{TA}:

The powerful movements of manifestation and reabsorption are nothing
more than the Emission of the Lord. The level of the Emissional is a projection
of the Self, from the Self, in the Self.\textsuperscript{43}

The play in the Sanskrit on the various forms of the term \textit{self}, (\textit{svatman}),
\textit{svatmanah, svatmani, svatmaksepa}, emphasizes the one and only possible
location in which the manifestation may take place.
Let us leave this rather long passage from the *PTlv* and turn to an excellent summary of the notion of *visarga*, which Abhinavagupta gives in his *MVv*. The section which precedes this passage summarizes many of the same ideas about the fifteen vowels that we have considered above. We begin with the portion that deals with the *visarga*. Abhinavagupta considers the notion of "projection" (*ksepa, viksepa*) as an essential component of the *visarga*.

At that point, within this mass of vowels, whose nature is that it is full because it unites everything, the Emissional Power so called, comes to be and that is a power which is known also as dispersion or projection (*viksepa*).

In the next verse Abhinavagupta plays with the notion of the *visarga* as the sixteenth vowel by suggesting that there are two further parts to it, a seventeenth part in which there is a separation, and an eighteenth part related to the concept of perturbation:

A seventeenth part is known as the "separation" (*vislesa*) of the *visarga*. In some texts there is mention of yet another, an eighteenth part due to another perturbation.

Abhinavagupta relates the *visarga* to the *kauliki-sakti* as we have already seen in the previous chapter:

This is the highest power, the supreme *kauliki* immanent familial power of that which is beyond the *kula*, that is, the group, of the phoneme *A*, which is the *anuttara*, the Supreme, formed of the Supreme Bhairava.

He then distinguishes three moments within the *visarga*. The first is simply the capacity for the internal movement which he terms agitation (*praksobha*), the second the beginning of that agitation, and finally there is the actual process of manifestation as it begins with the emergence of the first phoneme:

That indeed is the Emissional Power, and from it this whole universe arises. In it, we may distinguish three different moments, a capacity for agitation (*praksobha*), the beginning of the movement of agitation. Then, when there occurs a state of fullness of that agitation, the group of the phoneme *A* begins progressively to diminish as the other (lesser) vowels manifest. Thus the characteristic of that sextet of vowels is that it is produced from the oscillatory movement of the Emissional Power.

In the next verses Abhinavagupta relates this internal power of agitation
to the Supreme and the Lord and brings out the symbolism of the dyad of Siva and sakti, which is characteristic of the visarga:

Because its essential nature is the Supreme A, it is an expression of the first vowel, A. The blessed Lord is in fact eternally vibrating within himself.
In him is the central power which is full of the abundance of all beings. He is beautiful with a cosmic bliss that arises naturally from his own fully willed agitation.
He throbs eternally beautiful with the elixir (rasa) of this completely full Emission. That union of Siva and sakti is called love.⁴⁹

In this passage we see a perfect example of the several levels of symbolism being referred to at the same time: the cosmic, manifestational level of the God joined with his vibrating power, and the human level of sexual union. In the next verses the secret ritual of the Tantra is alluded to:

Those who desire to gain entry into this Emissional state in all its fullness follow the traditional lineage which teaches: "By means of churning and tasting." (V.Bh.70) So we see that the Supreme Light which animates the entire body and which presides over the central "vein" (nadi) agitated by the wine, garlands and the season attains a condition of Emission, and arrives at a state of ecstasy, of bliss, which may not be completely full; but if it is full, it is made of the Lord himself. Therefore this Emissional Power appears as a single unique power.⁵⁰

An excellent summary statement that joins these ideas together occurs in the TA:

That reality which is higher than the highest and the lowest, is called the Goddess, that reality is the essence, the Heart, the supreme Emissional Power of the Lord."

In another passage on the visarga Abhinavagupta presents the notion of encapsulation (samputikrti), which describes the mutual inherence of the absolute reality in all of the finite states, as well as the presence of those finite states in the absolute reality. As Abhinavagupta describes it:

Thus Siva who is pierced through by sound, is in his own essential nature self-reflexive consciousness. Siva, who appears as the Mother and Father at the same time, is thus the universal agent. The Emission composed of the power assumes the form of the point of Siva and again, because of the endless universe potentially contained within it, it assumes the condition of the Supreme. The self-reflexive consciousness which is applied to the very Self of the Lord, which in its internal essence contains the unlimited universal existence, is not, according to what is said by the teachers, characterized by
the state of duality. This self-reflexive consciousness as applied in the nature of the Lord is characterized by the non-duality of Siva and sakti, that is to say, of the Supreme and the Emission, and, because it is full to overflowing, it is called the 'I'.

This flowing forth formed essentially of the power, begins with the Supreme A and ends with the phoneme H, and as such comprehends within it the entire universe without remainder. This in the end is reabsorbed back into the Supreme. Thus this entire universe resides within the power, and that power resides within the highest Supreme, and that again resides in the power. This is the true meaning of the encapsulation taught by the Lord in the Sri-Trika-sastra, where indeed an encapsulation of the power is mentioned. The entire universe shines in consciousness and thus in the same universe consciousness shines forth. These three terms uniting and becoming compressed form the one, supreme form of Bhairava, whose nature is the T.  

We have considered at several different points the ideas summarized in the concept of encapsulation. The image seems to be one of two lotus-like halves of the Heart coming together like hemispherical bowls to enclose and contain the space within them. The two halves are formed of the Supreme and the power, and within them, as a result of their seamless connection, arises the entire play of manifestation. These three, the Supreme, the power (visarga), and the manifested world are all fused and intermingled into the single reality of the 'I', that is, the universal consciousness. This condition of encapsulation describes a condition of meditative realization in which the yogin actually experiences the encapsulated nature of reality. Once again, it is the visarga itself that will bring about this realization. Abhinavagupta describes this process in the next verses:

This Emissional Power of the Lord is present and functions in all things in the following way. That alone is the source of the entire agitation of the tasting of bliss. When the state of indifference has disappeared, a vibration is perceived in the Heart when one hears a sweet song, or smells the perfume of sandalwood and so on. This vibration is none other than the power of bliss. It is because of this power that men become aesthetically or religiously sensitive, that is, possessed of Heart.

(The three types of Emission). The first, the "atomic" (anava), known by the technical name of repose in consciousness (citta-visranti), occurs when all possible products are emitted into the fire of emptiness. The next, known as the awakening of the consciousness, is related to the power in that its nature is that it maintains all visible things, and here all things that are heard, seen, etc., tend to become submerged in consciousness of the self. Because of the unification of all things that are thus tending to be submerged in consciousness, and because of the increase and growth of these things in the Heart, because
of an entrance into Siva with a condition of being totally full due to the dissolution of the finite consciousness, as a result of the dissolution of the limiting possibility resulting from any future tension, as in the previous cases, there occurs the highest Emission. This is the Sambhava, known technically as the dissolution of the mind.

These three Emissions are described in similar terms in the Tattva-raksa-vidhana: the union of the two is regarded as occurring in the center of the receptacle of the lotus of the Heart. This union is characterized by the repose of the consciousness, and it is called the last Emission. The second Emission is characterized by the awakening of the mind. In it the entire universe, both moving and nonmoving, appears unified. This second Emission is of two types such that when it is even partially limited by the distinction between perceiver and perceived, then it is known as partial, and when it is united with Siva it is known as complete.

The third Emission, characterized by the dissolution of the mind and its nature, is a completely full perception due to the interruption of the perceiver-perceived duality, whose nature is thus a unification, subtle, composed of knowledge and reposed in the self.  

Once again we encounter a triple visarga. However, whereas the passages we have considered so far discussed the movement of 'emergence' from Siva, the notion that is discussed here represents the voyage of return to Siva. These two processes, the journey outward and the journey back in, are both conducted by the visarga, and represent on the grandest possible scale the ever-functioning nature of the visarga as expansion and contraction. If the process of manifestation, which involves the full-fledged appearance of the visible world, never truly involves a departure from the unmanifest, undifferentiated reality of Siva, then it follows that the tantric path of return consists of the recovery of this vision of the undifferentiated unity of all things. This vision, which at first appears to annihilate all things into the dark abyss of Siva, later grows into the unmilana samadhi, which reveals the pulsating essence of Siva actively structuring and maintaining all the apparently finite and even inert forms of visible reality. The yogin must come to a vision of the inseparability of all things from Siva.

This same visarga must be harnessed by the tantric practitioner to traverse this path of return. One must begin by becoming a sahrdaya, someone possessed of Heart. By this, Abhinavagupta means someone who has become sensitive to the vibration of the Heart experienced as a meditative blissfulness. There are three levels of meditative absorption. The first level is the atomic (anava) in which the meditator reposes in consciousness, citta-visranti. The term visranti, repose, is significant. It denotes an effortless resting of consciousness in itself, alert, yet undirected,
so that the current of consciousness may cause it to drift slowly inwards. This culminates in an inner vacuity which Abhinavagupta calls "the fire of emptiness" (Sunyatanala). The second level of absorption, known as the absorption related to the power (sakta), is that in which all objects of perception tend to become immersed in the consciousness of the self. This is termed the awakening of consciousness, citta-sambodha. The third level of meditative absorption, which results in the highest Emission, is called the Sambhava. Here the finite consciousness is dissolved and the fullness of Siva manifests itself completely. This stage is known as the citta-pralaya, the dissolution of the finite consciousness. While Abhinavagupta does not indicate so in the text, it seems possible that these three levels of meditative realization may have been related to the opening sutra of the Yoga-sutra, in which yoga is defined as elita-vrtti-nirodhah: "yoga is the dissolution of the activities of the finite consciousness."

Certainly, any trained pandita would have recognized the resemblance between this definition and the phrases citta-visranti and citta-sambodha.

In any case, the process of gaining the undifferentiated vision of unity of all things is carried out by this triple visarga. We may understand this as a consequence of the very nature of the Ultimate itself. Siva is freedom. He is that which cannot be bounded. He is ananta, endless. Siva cannot be imprisoned in the castle of transcendence. Within Siva there always occurs an overflowing, a surging vibration that leads the infinity of Siva continuously to surpass itself. Any boundary that might be set for Siva, any limit that one might attempt to impose in order to contain Siva will, by the very definition of Siva as freedom, be overthrown. The boundary will be destroyed and the unbounded freedom of Siva will assert itself. In fact, this process of self-transcendence is self-referential: when we define Siva as unbounded freedom, he immediately goes beyond this definition and plays the game of hide-and-seek, by manifesting the boundaries of the finite self and the limited experience of the visible world. He thus transcends unbounded freedom by becoming bound and not free. Abhinavagupta describes this process of self-concealment as brought about by the force of maya:

As has been said, the consciousness of the Self, as a result of its own intrinsic nature, is full of all things, and there is nothing whatsoever to be added or subtracted from it. However, as a consequence of its capacity for action which is difficult to understand, and because of its unblemished freedom, the highest Lord skillfully plays at the sport of hiding himself. In this respect maya is nothing more than this self-concealment brought about by the Lord, even though his nature is unconcealed and manifestly clear. It is as a result of maya that all our activities are imbued with differentiation."
Siva's nature as self-transcending freedom, however, is continuously operative. As soon as the process of manifestation of boundaries occurs, Siva initiates the process by which it may overflow these boundaries which he has imposed on himself. He structures the path of return traversed by himself, in the guise of the ignorant, finite self. As Abhinavagupta relates the process of self-concealment and self-discovery,

The God, whose nature is a free consciousness, whose characteristic is the supreme light, due to his own intrinsic nature and as a result of his enjoyment of the sport of concealing his own nature, becomes the atomic, finite self, of which there are many. He himself, as a result of his own freedom, binds himself here by means of actions whose nature are composed of imagined differentiations. Such is the power of the God's freedom that, even though he has become the finite self, he once more truly attains his own true form in all its purity.\(^56\)

The power that fuels and continuously urges this self-transcendence onward is once again the very nature of Siva, the visarga-sakti. This process may appear to necessitate effort and discipline on the part of the practitioner, but it becomes effortless once the practitioner has attuned himself to the visarga. We can understand this by seeing that the infinite has managed the impossible task of compressing itself into the finite. It then follows that the realization of the infinite involves a process of decompression, of relaxation of the boundaries and bonds which tie up the infinite. This may be accomplished by releasing the tight structures of finiteness, and by attuning to the inwardly expansive movement of the visarga, which as anugraha, grace, or kundalini, is always operative on the finite self. Then a process of overflowing, of spilling over the walls of the boundaries occurs.

According to the teachings of the tradition, this process is one that all finite souls must inevitably come to, for the visarga-sakti is always present in the Heart. As a force which is always available in the center of the yogic body, it is an ever-functioning and undeniable urge in the direction of expansion, of infinity, of freedom, of bliss. Absolute consciousness is never inert, it is never inactive; it is continuously throbbing, expanding, and contracting with the movement of the Heart. As we have seen, it is this movement which continuously, at every instant, projects manifestation into being. It is this same movement, however, that at every moment resolves this manifestation back into Siva. The expansive-contractive impulse occurs so rapidly that the manifestation is simultaneously established as gross and fully formed, and at the same time, it is always fully abiding in the undifferentiated unity. This dual nature is what is expressed by the notion of encapsulation.
From the point of view of the bound soul, this movement of the *visarga* may be utilized as an infallible method (*upaya*). In its reabsorptive mode, the *visarga* functions automatically as a method for realization of the absolute. When at any instant of awareness one's attention is released into the flow of the *visarga* and ridden much like a wave, then the finite point of individual awareness can perceive its own individual wave merging back into the enormous ocean of consciousness. The individual awareness experiences the inner transformation of his finiteness into the infinite consciousness of the Heart. This experience is the basis of the *Sambhavopaya*, the effortless and graceful merging back into Siva which utilizes the invincible and almost blind urge of the finite to melt back into the whole. In this sense the *visarga* forms the basis for the Kaula method of realization. Abhinavagupta praises the *visarga* as the supreme secret of the Kaula lineage:

In this way, the dyad, where little by little all differentiated knowledge has dissolved away, is consciousness itself, the unifying Emission, the stable abode, the Supreme, made out of the most noble universal bliss, composed of both Siva and *sakti*, this is the supreme secret of the Kaula lineage, which is neither appeased nor arising, and yet which is the cause from which emerge all arising and appeasement."

In the same chapter, which contains much penetrating material on the nature of the *visarga*, especially in relation to the secret ritual, Abhinavagupta describes the *visarga* as being triple:

Thus the *visarga* is threefold: unifying, emergent, and then appeased. This is because from it the varied manifestation emerges (*vicitra sarga*), and to it the manifestation returns (*vigala sarga*). The water-pit (*kunda*) is the power, Siva is the *linga*, and the union of the two (*melaka*) is the highest abode. 

In the commentary, Jayaratha links the emergent (*prodiita*) form of the *visarga* with the *sakti*, the appeased (*Santa*) form with Siva, and the unified (*sawghatta*) form with the union. Besides the obvious appeal of a triadic classification for the notion of *visarga*, this threefold categorization succeeds in illustrating the all-encompassing nature of the *visarga*. Abhinavagupta appeals to this same triple division of the *visarga* in the *PTlv*:

With the descent of the knower and the process of knowing Bhairava and the power, (*H* and *AU*), there occurs the repose in *brahman* (*S*), that is, a state of undifferentiated identity with the knowable object. The reality which unifies, that is makes of one taste (*ekarasa*) this triangle characterized of three Emissions, one appeased, one aroused and one that is both, and is thus
made of three reposes - that reality is the supreme Emissional principle, and it is the consciousness, the Lord Bhairava himself.  

Here we see clearly that the visarga is responsible for the recovery of the vision of the undifferentiated unity of all things. The visarga makes this universe literally be "of one taste" (ekarasa). The yogin who has brought this process to its completion is able to recognize the underlying and essentially unconcealed reality of Siva that composes the most intimate status of every apparently finite object. This same process is described by Abhinavagupta in the PTLv as forming the essential feature of the sacrifice (yaga) that is carried out by the tantric vira in order to "encapsulate" the entire manifestation:

The sacrifice (yaga) is in fact the Emission, which is a resting in that repose whose nature is the "beyond the fourth," the mass of the nondifference of all things. Then he should sacrifice, projecting in that condition of the beyond the fourth, the portion of the Emission, which embraces the entire manifestation, projecting, that is, the form which ends with A U, which embraces in itself the tetrad of states beginning with the waking state. Because of this, the Emission, which is situated in the center, is in immediate contact with the states of the vowel (A V) and the Being (S) which are placed at both of its extremes, and it comes to appropriate the blessed supreme Goddess, whose nature is the Ultimate (anuttara), and which abides in nondifferentiation with the Supreme Bhairava, the great Lord, which power transcends all and at the same time is composed of all principles, and is joined with all the masses of existing things which thus form its limbs.

We shall return to the process of attainment of liberation, which includes the rediscovery of the undifferentiated unity of all things, as well as to a discussion of the mantra, which both symbolizes and facilitates this rediscovery, in the final chapters. However, we turn in the next chapter to explore some of the images drawn from nature that are used in the non-dual Kashmir Shaiva tradition to describe the reality of the Heart.
The Heart and Natural Metaphors

This chapter treats certain "natural" metaphors or images that occur frequently in close proximity to the Heart. These images - the sky, the abyss, the ocean, the moon, and the lotus - all drawn from the world of nature, convey important aspects of the reality of the Heart. They suggest information about the description of the Heart that is important to examine to complete a picture of the symbol.

As has been the case throughout this examination of the Heart symbol, it is the experiential dimension of the reality of the Heart that is brought to the fore by these natural metaphors. We can understand equations such as the Heart as equivalent to the sky, or the Heart equal to the abyss as constituting descriptions of the yogic immersion in the Heart. To suggest that these metaphorical correspondences are mere flights of poetic fancy would be to misjudge seriously the intention of the authors of the texts. Whether we take these images as direct metaphors or as similes, we must see them as the closest possible descriptions that may be given of certain phases of the yogic experience of the Ultimate.

Khecari

The term khecari appears in the Goddess initial question in the PT verses. The Sanskrit text of the second half of the first verse reads, "yena vijnatamatrahe khecarisamatam vrajet." Two different readings of the sense of the line result from two possible interpretations of the second pada:
1) by what means, as soon as known, does the khecari, "moving-in-the-void," attain a condition of equality

2) by means of which, as soon as it is known, he would obtain the condition of equalization with the khecari*

The first reading takes khecari to be the subject of vrajet. The second interprets the expression khecari-samatam as a tatpurusa compound. While the second rendering is perhaps the prima facie reading of the verse, Abhinavagupta clearly signals his preference for the first, not-so-obvious interpretation:

As soon as this means is known, the khecari - this power of consciousness - penetrates into the level of awakened consciousness, and obtains, goes, knows, the state of identity (samata), the state of fullness of the self, the state of non-dual, non-discursive awareness. When that means is not known, such & consciousness is not khecari because it moves only in the portion called "knowable object" whose nature is unawakened. That consciousness is then restricted by knowable objects such as blue, etc., and is thus not the full power of consciousness.

Another interpretation of the sloka is now presented:

Moreover, the spiritual perfections are obtained by the practice of the yoga of the vital breath etc., by a series of practices such as concentration etc. How can the Ultimate, which is devoid of temporal succession and is only consciousness, grant the kaulika perfection, linked to temporal succession, by the mere knowing of which, one would obtain the nature of the Goddess?2

Torella, an Italian Indologist who has studied the PTlv, argues that the second part of the above commentary explains the second reading.3 It is unclear on what basis he draws this conclusion. While there is little doubt as to the reading of khecari-samatam as a tatpurusa, it is not clear on what basis Torella concludes that this is what Abhinavagupta is trying to indicate in this particular passage of the commentary. In the portion of the commentary referred to, Abhinavagupta appears simply to gloss khecari-samatam with the phrase devirupatvam: attainment of the condition of the nature of the Goddess. Torella seems to infer from this that Abhinavagupta is signalling the reading of khecari-samatam as a tatpurusa compound, but this is not at all obvious from the commentary.

An inquiry into the grammatical structure of the term khecari can lend some insight to the meaning of the term and show how it functions in this verse. To begin with, we can see that khecari is an aluk samasa, that is, a compound in which one of the members, kha, has retained a
case ending, here a locative ending, giving *khe* as a result. *Kha* means a cavity or hollow. This cavity can be an opening in the ground such as a cave, but may also refer to a cavity or opening in the body. The body openings are usually numbered as nine, but *kha* most often refers specifically to the vagina. In addition, *kha* comes to refer to the vacuity of empty space, of the ether (*akasa*), of the sky (*vyoman*). The second member of the compound, *-cari*, seems to be the feminine form of the adjectival *cara*, meaning "moving." So initially, *khecari* may be read as "moving-in-the-void." The void referred to can be that of the emptiness of space or of the sky. The sky then comes to be identified with the consciousness of Bhairava, the *bhairaviya-eid-ambara*:

Thus the entire universe is a reflection in the pure sky of the consciousness of Bhairava, in the Lord, and it is not at all due to the favor of anyone else.4

Thus the query of the Goddess in the first verse of the *PT* becomes easier to interpret. The attainment of the condition of *khecari* represents an entrance by the very power of consciousness into the level of enlightenment. The power of consciousness then obtains identity, oneness, evenness, fullness of the self, and a non-dual, nondiscursive consciousness.

To move in the sky of Bhairava is to have gone beyond the limiting presence of finite objects as such and to have penetrated into a level of awareness which is empty of objects. Here the triad of knower, known, and the process of knowing has been transcended. The knower turns away from objects and doubles back on itself. In so doing it creates a situation in which the object of knowing is the knower itself, and the process of knowing is also simply the knower itself. As we have seen in several contexts, this situation represents the simple condition of pure consciousness that in its *vimarsa* aspect is continuously doubled back on itself to engender self-referential consciousness. As the awareness, the power of consciousness, withdraws effortlessly from the entanglement with external objects and begins to emulate the native condition of supreme consciousness, it becomes *khecari*; it moves in the void. This state is described as empty because of the experiential contrast with the apparent fullness of objectivity that precedes it. Abhinavagupta emphasizes the fullness of the *kha*, however, because it is the creative matrix (*matrka*). This is the secret cave (*guha*) of the Heart, the endless abyss or chasm, the mysterious opening (*yoni*) in the body of the Goddess which gives birth to the entire universe. The *sadhaka* wishes to return to this powerful source of all being and when he does his high spiritual attainment is termed *khecari-mudra*: the spiritual posture that is sealed with the condition of moving-in-the-void.

In the very next verse of the *PT*, the Goddess continues her plea to
Bhairava. She says, "Powerful Lord! My very Self! Tell me that mysterious secret, great, unconcealed." Once again, in his reading of this verse Abhinavagupta emphasizes essential doctrines of the tradition by a slightly eccentric reading of the Sanskrit text. The rendering above is Abhinavagupta's reading of, "etad guhyam mahaguhyam kathaya sva mama prabho." In his commentary, Abhinavagupta does not take mahaguhyam at its prima facie reading of "great secret or mystery." Rather, he allows the term which precedes it, guhyam, to establish that we are dealing with that which is mysterious, secret, concealed. Abhinavagupta glosses guhyam as "preeminently secret" (aprakatam atisayena). This gloss allows him to read the expression mahaguhyam as two separate terms: mahat, "the great," and aguhyam, "the unconcealed."

The "great" is unconcealed because, as he glosses it, it is self-luminous. There is finally nothing that is able to conceal the great consciousness of Bhairava except his own free power to cover himself over and to reveal himself. In so doing, Bhairava achieves, firstly, the manifestation of finite objects and, secondly, the revelation of the intrinsic nature of those finite objects, the self-luminous unconcealable and mysterious Self.

Abhinavagupta indulges in another eccentric but wholly grammatical reading in this verse when he translates kathayasva. On the surface, this word is simply the second person, singular imperative atmanepada of the root kath. Abhinavagupta wishes to separate the ending -sva, however, and interpret this as a vocative addressed by the Goddess to the Self, the Bhairava. He is able to sustain this reading grammatically because the form kathaya may then be interpreted as the imperative second person singular of the parasmaipada. The point of these clever grammatical manipulations is to underscore the importance of the Self, of the 'I', as the enormous, secret and yet unconcealable reality about which the Goddess is inquiring: she is inquiring about herself, about the kaulini sakti, which abides in the Heart. Abhinavagupta says in the PTv:

"The manifestation is the Heart inasmuch as it is identical with the group of phonemes from A to KSA. It is called the power, the secret (guhyam). The condition of the spiritual hero (vira) is the seat. Everything resides there because it is the receptacle. The receptacle and what it contains are mutually of the very same nature. As it says (in the Bhagavad Gita 4:20), "He discovers the Self in all beings and all beings in the Self.""

The natural metaphors presented here all seem to point to the 'I' as their final referent. This chapter will conclude with a more detailed exploration of the nature of the 'I', the AHAM, which is the infinite consciousness in which the yogin wishes to attain the freedom of movement known as
the *khecari-mudra*. At present, however, it is possible to note that in the P77v Abhinavagupta describes true subjectivity as composed of the power of space:

For the power of space (*akasa-sakti*) is inherent in the individual soul as the true subjectivity, which is at once empty of objects and which also provides a place in which objects may be known.7

**Ocean and Wave**

Another aspect of the Self in the Heart is revealed in its nature as ocean and wave. According to the tradition, the Heart is the ocean (*ambhonidhi, sindhu, samudra*), the ocean of light, the ocean of consciousness (*bhairaviya-cid-ambara*). The surface waters of this ocean of consciousness are massed into countless polarizing waves (*Urmi*). Abhinavagupta writes in the *TA*:

For that vibration, which is a slight motion of a special kind, a unique vibrating light, is the wave of the ocean of consciousness, without which there is no consciousness at all. For the character of the ocean is that it is sometimes filled with waves and sometimes waveless. This consciousness is the essence of all. The insentient universe has the consciousness as its essence, because its very foundation is dependent on that, and its essence is the great Heart.8

The waves are part of the essential character of the ocean even if the ocean at times is apparently without waves. The vibration, the *spanda*, is responsible for setting up the motions, patterns, and activities on the surface of consciousness. As we have seen, the *spanda* is continuously operative, even if at times patterns do not appear on the surface of consciousness. The ocean of consciousness is the foundation of all the finite waves that appear on its surface. In essence wave and ocean are identical. However, the ocean is unbounded (*apurimita*) in its nature, while the waves of activity are finite.9

It is the powers of the Self (*svasakti*) that, emerging from the ocean of consciousness and uniting together in various and sundry ways, create the finite realities. The mutual interaction of the powers to manifest the finite is termed the power of action (*kriya-sakti*).10

In the commentary to *sloka-s 5-9a* of the *PTlv*, Abhinavagupta summarizes the process of manifestation as it emerges from a slowing down of the vibratory speed of the expansion and contraction of the *visarga.* In a
parallel process, the fifty phonemes, beginning with the vowels, and the thirty-six tattva-s, which constitute the building blocks of manifestation, emerge. The details of this process clarify the intrinsic nature of manifestation as a sounding-forth that begins with the infinitely subtle sounding of spanda and becomes progressively more perceptible, dense, gross, and solid. We have already alluded to this process and to the complex correspondences between the various phonemes as they emerge through various levels of the process and the different elements or principles. The process of manifestation continues until the infinite consciousness of Bhairava has been reduced, apparently, to the inertness and unconsciousness of a stone. It is this level of inertness (jadata) that marks the outward limit of manifestation. From here the process of srsti may be reversed and the voyage of return initiated. At the end of his description of this process Abhinavagupta states:

Therefore, all this is at first formed of an undivided self-referential consciousness. But then, because of an act of self-divided consciousness, whose nature is an awareness of distinctions, it assumes the form of fifty cognitions which attain the state of being objects, and thus the group of external objects arises. The life of these principles results precisely because they are essentially moments of conscious cognition. This is the form of the mātrakā.

In the context of the metaphor of ocean and wave we may understand the difference between the two types of self-referential consciousness, what Abhinavagupta terms in this passage the undivided (avibhaga-paramarsa), and self-divided (vibhaga-paramarsa). We have seen that an essential feature of the absolute reality is the notion of vimarsa-consciousness is always self-referential, it is turned back on itself. In the above passage Abhinavagupta's term paramarsa has been rendered as "cognition." The image of a wave is useful in clarifying the nature of these cognitions.

Vimarsa can be understood as a doubling back of consciousness on itself in which the internal wave motion (spanda) inherent in consciousness is in synchrony with itself. We might extend the image and imagine that as one particular 'current' within the ocean of consciousness surges onto another current of consciousness, the two currents, or more precisely, the movement of the various sakti-s, blend in a synchronized fashion. This process results in an evenness (samata), a perfectly synchronized blending and merging of these currents in a balanced way such that obvious patterns or disturbances do not occur.

We might understand the situation of paramarsa as the same process: consciousness doubles back on itself. In this case, however, the internal wave motion of one sakti is not in synchrony with that of another. Thus,
as the two 'masses', or currents of consciousness, collide, disturbances are set up, and interference patterns occur. These disturbances are areas of patterned activity which result from the interference caused by the merging of the sakti-s. They could be understood to constitute the generative matrices that result in finite objects and may be seen as discrete event-areas. At first exceedingly subtle, these event-areas increase in solidity as they cast a shadow downward through the various levels of the process of manifestation.

Thus, as Abhinavagupta says above, the different powers of the Self, of the Lord, intermingling with each other in various ways, create the patterns that result in the specific cognitions of apparently separate and finite objects. Objects are indeed finally 'cognitions', because they are nothing more than the event-areas within the Supreme. Perception is thus a process in which the infinite consciousness encounters its own interference patterns and takes cognizance of them. Furthermore, just as in the Samkhya, it might be noted that the word objects includes all of the psychological structures of the awareness of the individual person. Abhinavagupta makes this point explicitly in the P77v when he states that even the purusa (and here he departs radically from the Samkhya) is to be reckoned among the class of knowable objects. In this sense, the individual finds himself truly sunken within the ocean of consciousness. Thus, as the opening verses of the MVT proclaim, "He is the Savior of all of those who find themselves immersed in the ocean of the world."

Here knowable objects are in essence nothing more than the absolute consciousness, but with the difference that objects which appear to be solid and separate are in reality discrete areas of patterning set up by the internal interferences of the Sakti-s. By contrast absolute consciousness is just that - unbounded and unconstrained by a pattern of any sort. The language of manifestation leads one to conceptualize the process of srsti as an emergence out of Siva, as a separation. Consequently, it also leads one to think of the process of return as a reentrance into Siva. However, from the supreme viewpoint, the claim is made by the tradition that nothing ever really emerges from Siva. The entire srsti is always within the all-pervasive reality. Similarly, it is not that we must travel far beyond the manifested world in order to locate the interior universe of the ocean within the Heart. To speak of distance, of return, of a path, may be useful aids for the spiritual practitioner; in reality, however, all objects, all beings, all possible experiences are continuously and eternally bathed in that ocean.

Abhinavagupta's images of ocean and waves derive from the experiential absorption (samavesa) in the Heart. The SS states, "Abiding in this spiritual posture, he plunges easily into the lake." Ksemaraja clarifies in his comment that,
He easily plunges into the lake, the ocean of supreme immortality (*paramrta-samudre*), whose characteristic is the limpid capacity to spring up (*ucchalata*) and is thus the cause of the advancing streams of the unbroken, continuous flow of the universal realities.\(^\text{14}\)

In the final verses of his *SSV*, Ksemaraja refers to the *bodhasudhasindhu*, the ocean of nectar of enlightenment:

> He who by means of this teaching perceives on all sides the universe like a mass of foam in the midst of the ambrosial ocean of consciousness, he is declared to be the one Siva Himself.\(^\text{15}\)

In addition Silburn comments:

> Allusion au *sudhasindhu*, océan de nectar qui parmi les 60 océans de la mythologie indienne est le plus interieur: frais, procurant l'immortalité, il symbolise la Conscience infinie. Son nectar enivrant, boisson des dieux vediques, dispense l'immortalité et met fin aux limites de l'existence.\(^\text{16}\)

Finally, it is not out of place here to cite a related passage from the *RV*:

> The whole universe is set in your essence within the ocean, within the Heart, in the life-span. Let us win your honeyed wave that is brought to the face of the waters as they flow together."

Imagery of immersion (*nimajjana*) is important in this context. It has implications of sinking down, of diving, of plunging into, of bathing, of penetrating, and of submersion. In this way the highest spiritual practice is likened to a purification that is effected by simple and easyful (*sukham*) sliding into the ocean that is within the Heart. Abhinavagupta repeatedly makes reference to this process. In the chapter of the *TA* devoted to the Kaula practices he says:

> These same divinities are likewise to be worshipped and "practiced" in one's own body. By whatever object of practice, whether it be the appeased form which is to be obtained by means of the consciousness in the Heart, one obtains Siva in his quiescent, appeased condition like an ocean without waves (*galitatarangarnava*). Once one has attained this appeased condition, all the groups of divinities which reside in the wheel, leave off all their activities, and remain immobile, as if suspended in the void, devoid of bliss.\(^\text{18}\)

Similarly, in another chapter, Abhinavagupta expounds the various kinds
of ritual bath that the practitioner may take - in water, in earth, in the
wind, and in the ether. He continues:

He who immerses himself in the light of the sun and moon, mentally con-
templating the condition of Siva, is purified of all stains. . . . The Supreme
Lord, the great lake where all practices are abandoned, is nothing more than
the Self. He who abides immersing all into this lake, is both the pure and
the purifier. 19

Abhinavagupta is clearly playing here with the powerful ideas relating
to bathing as a religious duty, and the consequent attainment of purity
and avoidance of impurity. While he does not reject the actual practice
of bathing the body, he seems to imply that it is the inner bathing in the
ocean of consciousness that results in the attainment of the highest purity.
It is the vision of the limitless Self, of the immortal being, that removes
the taint of impurity which is, in fact, nothing other than the idea of
separation, the awareness of differences. 20

In another passage, the notion of immersion occurs as part of the
explanation of the nature of the attitude of devotion necessary to perform
the ritual of sacrifice (yāga). In the PTlv, Abhinavagupta says that the
sacrifice consists essentially in visarga, the power that manifests, main-
tains, and reabsorbs the universe. This statement may be linked to the
ancient notion, described in Rg Veda 10.90, of the primordial sacrifice
of the cosmic man (purusa), which results in the creation of the universe.
In any case, Abhinavagupta describes the inner attitude of one who
practices the various sacrificial rituals, and he emphasizes the importance
of the inner state of expansion of the practitioner as the prerequisite for
the successful practice of the highest form of sacrifice. In his explanation
the term nimajjana, immersion plays a key role in the explanation of
bhakti. He says:

In order that this sacrifice be successful, one must properly honour (the
Goddess) with fragrant flowers which effortlessly allow for an entrance into
the Heart; and by flowers are meant all substances - external and internal
which nourish the Heart because they bestow their own nature within the
Heart. By the expression "according to his powers," he means that power
which is the expansion of his essential nature, because one who has not
appropriated the essential nature of that power is not suited to perform the
sacrifice since he is still "contracted;" or else he refers to the blissful external
power which is useful for developing the inner power. This outer power is
found in external materials suitable for the sacrifice such as ablutions,
ungsents, incense, betel leaf, spirituous liquors, and so forth.
But one may ask, how should he sacrifice properly? With the highest devotion,
with reverence and with great faith, all of which grant him absorption. This great devotion consists in effecting the subordination of the finite levels of the body, the vital breath, and the subtle body. This subordination consists in accomplishing a state of humble devotion, whose nature is an immersion into the essence of that which results in the removal of those finite levels and the establishment of the superiority of the supreme consciousness, whose nature is the Divinity which has been described and which is to be sacrificed to.\textsuperscript{21}

Here again we see that the essential component of this immersion is an entrance into the truly free and unbounded condition of Siva. The practitioner must plunge into the waters of the ocean of the Heart and must sound its depths. This immersion purifies him of the illusion of duality, of the shackles of finiteness, and prepares him to emerge back into the finite world with a fresh and clear vision of the omnipresence of Siva. Alper eloquently summarizes many of these ideas by noting that,

These clues suggest two related lines of imaginal explication: \textit{prakasa} as spatial effervescence, and \textit{prakasa} as the sea at the heart of all things.... The theology of \textit{prakasa} speaks not only the language of scientific prose, but also in what one might call a language of spiritual and emotional liquidity. It hints at the dissolution of ordinary ego consciousness, at immersion in the cave, the bottomless center of all phenomena; it seems to speak of overflowing, being brimful, of being afloat in the depths of the sea.\textsuperscript{22}

It is precisely this "language of spiritual and emotional liquidity" that forms the focus for this exploration of the nature of the Heart.

\textit{The Immortal Moon}

We have examined the nature of the Heart as an absolute reality that is ceaselessly in the process of expanding and contracting. In the \textit{P\text{\textit{Tlv}}} we read that the Heart is the moon.\textsuperscript{23} The symbolic linkages at work here are complex. On one level, the visible moon presents a continuous reminder of expansion and contraction. The infinitely fast motion of the absolute reality has been slowed down in the phases of the moon so that its periodic cyclical nature can be perceived clearly. The bright lunar fortnight (\textit{Suklapaksa}), from the new moon through the waxing crescent and the waxing gibbous, to the full moon (\textit{purnima}), presents the phase of expansion. Similarly, the dark lunar fortnight (\textit{krsnapaksa}), which moves through the waning gibbous to the waning crescent and to the new moon (\textit{amavasya}), presents the phase of contraction. Each lunar fortnight is divided into fifteen lunar stations, \textit{tithi}, the lunar days. The
The process of manifestation of the vowels is said to originate from the midst of the expansion and contraction of the Rudra-dyad. The first group that appears are the vowels A, I, U, and their corresponding long vowels, A, I, U. The first three vowels are particularly important as is revealed by their identification with the three terms anuttara, iccha, and unmesa. These vowels are praised by Abhinavagupta as "the supreme effulgence of Bhairava, the power of the supreme Lord in all its fullness." The vowels in the next group of four, R, R, L, L are known collectively as the amrta-bija-s, the seeds of immortality, a name which alludes to the important connection between the moon (candra, but also soma) and the nectar of immortality (soma, but also amrta). The following group of four vowels, the diphthongs E, AI, O, AU, results when the Supreme
unites with each of its partners in the first triplet: A (or A) joining with / (or I) gives as a result first £ and then AI. Similarly, when A joins with U (or 0), first O and then A U results.

Some might see in this description a kind of post facto creation myth varnished lightly over the first rules of Sanskrit samdhi, euphonic combination. To dismiss the Kaula phoneme mysticism in this way is to miss the essential connection that these sounds have to the structuring of the mantras. If these sounds are the first rumblings of vibration within the absolute reality as it prepares to manifest, then they are significantly close to the absolute source which the yogin wishes to approach. Their mutual connections, as they unfold from the absolute, are crucial inasmuch as they grant a knowledge of the salvational combinations of mantric sounds that are structured around these powerful vowels. This fact is of far greater interest to the tantric practitioner than the fact that these combinations are also the basis for the structuring of the rules that govern the grammar of the Sanskrit language.

Of the two remaining vowels in the list, the bindu, AM, is counted as the fifteenth and final tithi, while the visarga, H, is not counted among the tithi-s because it is the source of the entire process that displays these sounds. Abhinavagupta tells us that the visarga inheres generically in each of the preceding fifteen sounds:

In this respect, the Emissional state (visarga: H) is the universal form generically implicit in each of the fifteen different moments and thus it does not require separate consideration. 27

The term tithi is glossed in the following way:

The vowels which begin with A and end with the bindu are called tithi, lunar stations, because they fill up the "stations" (sthit) of the moon of awakened consciousness. In this way, the Emissive Power of the moon of enlightened consciousness, which is composed of bliss and light, that is, the Emissive Power of the Ultimate, is filled by these fifteen stations. 28

The vowels are termed svara because they shine by themselves (svayam rajantah); they are self-luminous, and they are a result of the process of sounding that occurs when consciousness is in a state of self-referral.

These fifteen are called vowels (svara), because their nature is a sounding whose character results from the self-referral of consciousness; and because they shine by themselves (svayam rajantah), and thus with respect to the external world are self-luminous. Within them are the moon and sun,
contraction and expansion. Within them as their nature is the visarga which is made up of two dots (bindu).²⁹

We see that the visarga is the source of the process of manifestation that gives rise to the vowels; it inheres in each of the vowels, and it is fulfilled by these same vowels.

The expression bodhacandra, the moon of enlightened consciousness, makes the relationship between the moon and the state of fulfilled consciousness even clearer. Just as the moon expands from the new moon to the full moon (purnima), so consciousness expands from its condition as the finite purusa to the fulfilled state of Bhairava. The process of expansion and contraction never ceases: as soon as the fullness of Bhairava is attained, increasing contractions that lead to the finite realities and selves begin to function. In the same way, the full moon inevitably diminishes to its 'death' in the new moon.

The expansion and contraction that are apparent to an observer, however, are sustained by an underlying reality that is not affected by the expansion and contraction. Bhairava is not affected by the expansion and contraction that is his nature. So also, the moon which is 'born', 'grows', and 'dies', is, in fact, upheld by an underlying immortal essence, the soma, or amrta. This immortal essence is hidden in the cave where it is termed Ama, "together." The new moon, Amavasya, is so termed because it is then that the sun and moon dwell together. Ama satiates and satisfies the universal reality; its nature is to feed and sustain because it is the water of immortality. The other fifteen parts of the moon pass away, but not the sixteenth part, which sustains and upholds them.³⁰ This sixteenth part, which is the visarga, is seen dyadically in the term soma, which is broken apart for these purposes into Sa and Uma: the God and the Goddess joined together.³¹

It is soma, this immortal, underlying essence, which is both the moon and the Heart, which the sadhaka must employ to go beyond the vibratory polarities of the finite world. This is the recommendation of the last and perhaps most important teaching given in the PT verses:

The 'seed' which has no beginning and no end, which moves in the midst of the stations, expanding, this he should meditate in the lotus of the Heart, and always practice the rays of the moon.³²

Abhinavagupta explains this verse in the following way:

The 'seed' whose function is to carry the meaning, is the Heart, and its meaning is the "rays of the moon" (somamsu). (Another meaning could be the filaments
of the *soma* plant). The teaching, then, is that he should practice according to the method of non-difference between the signifier and the signified, [where the rays of the moon] are interpreted as the great quantity of light which is joined together (*samghatta*), and the moon (*soma* equalling *Sa* and *Uma*) is the pair of the blessed Lord Bhairava and his power.\(^{33}\)

A variety of meanings converge here: the Heart is established as the ocean of infinite light, and as the abyss of profound darkness. In a sense, the Heart as moon is capable of mediating between these two images - the moon of great light, the moon of darkness. In addition, the moon is the container of the *soma*, of the *amrta*, of the waters of the ocean of immortality that sustain and transform the finite realities that have emerged from that ocean. The Heart as moon is thus a priceless goblet from which one drinks the ambrosia of bliss.\(^{34}\) One comes to the realization of Siva by imbibing the nectar of the Heart:

> If having learned about the nature of death and having become like gods, you drink, after having imbibed the oceanic poison, you drink the nectar that comes from the ocean of consciousness, gushing forth by the squeezing and attraction created by the unmoving force of the Heart, then, without a doubt you will become identified with Siva.\(^{35}\)

The nectar that pours out from the moon is likened to the melted butter that is poured out as an oblation in offering to the gods, who are so gladened and heartened by it that they produce manifest reality:

> At this point, the moon, which is made up of sixteen parts, and which is slow in devouring the Emission, the moon, the one who animates, shining brightly, emits the nectar of immortality into the fire of consciousness; this divine nectar like the melted butter on the sacrificial ladle satisfies and gladdens the deities of consciousness with the aid of the powers of will, knowledge, and action, through the subtle openings. As soon as this nectar of the Emission is emitted into the fire of consciousness, then the entire wheel of the six paths is poured out as an oblation. Thus the Emission of the Lord, of the Supreme, is the mistress of the Embodied Cosmos, and its agitation corresponds to the various phonemes from *K* to *H*, while its pouring forth is signalled by the (fifty) principles.\(^{36}\)

We have seen that the last of the vowels to be counted among the fifteen *tithis* is the *bindu*, *AM*. Abhinavagupta clarifies the meaning of the *bindu* when he says in the *PTiV* that the *bindu* arises when all knowable objects are reduced to latent impressions and the isolated knowing subject appears.\(^{37}\) Abhinavagupta clarifies this in the *TA*;
The undivided light which shines in the abodes of the moon, sun, and fire - this is the supreme bindu. As is said by the Lord in the Tattva-raksa-vidhana, the point or dot (vindu) which stands within the circle of the lotus of the Heart is to be known by means of a special absorption as characterized by the triad of man, power, and Siva. The point is a stainless liberator. This point is a sound whose nature is a vibrating hum (nada), and it is to be found in all living beings.\(^{38}\)

Note that the bindu comprises both an undivided light and a sounding, a vibrating roar. The essential distinction of prakasa-vimarsa may thus be seen as reduplicated in the individual point of consciousness. The bindu is at once pure illumination (prakasa), as well as the vibratory sound (vimarsa) generated as that pure illumination continuously maintains self-consciousness by referring back onto itself. The bindu is spoken of as pure consciousness.\(^{39}\) Consciousness as the bindu is both the supreme undifferentiated light as well as being the nada, the subtle vibratory sounding that is the source of all language. Ksemaraja, in his commentary on the Siva-sutra-s, refers to the bindu as the paraprakasa, the supreme light. In a long passage which Ksemaraja quotes from the Tantra-sadbhava, the central bindu is related to the kundalini that encloses it by coiling up around it in the form of a snake.\(^{40}\)

The bindu as the creative droplet is also related to soma, that powerful liquid, the nectar that bestows immortality. As such, it joins the symbolism of the moon that is always associated with the soma. In his commentary on the Netra-tantra, Ksemaraja refers to this nectar.

Then, the nectar of Siva, which is conceived of as being nada and is the master of the sadasiva, this nectar which is the power and seed of manifestation, and which has as its nature the object of manifesting clearly the entire objective universe, falls on the head of the bindu which is to be manifested, and which is the essence of the entire universe."

One of the ways in which the bindu was employed in Sanskrit was known as the ardhacandra, the phonetic mark for nasalization of a syllable, which was in the shape of a half moon. Another interesting symbolic relationship is that the nada in the passage just quoted is called the srsti-virya, which at one and the same time invokes the power of manifestation as well as the sexual symbolism of the seed of manifestation. This intermingling of symbolisms is even more apparent when one explores the nature of mantra-s, which are at once seed, bija-s, as well as powerful bits of sound that can bring into being the entire structure of spiritual experience.

More relevant here, however, is the important triad of moon, sun, and fire. Until now we have been considering the nature of the Heart as
moon, but within the realm of manifestation the moon forms part of this important triad. The meaning of this triad can be explored in terms of the essential structure of finite awareness, which always involves a finite knower, a process of knowing, and a known object. The finite knower, (vedaka) is equated with the bindu, which in terms of this particular triad is said to be the fire (vahni, agni). The process of knowing (vedana), is linked with the sun (surya) and the objects that are known (vedya) are linked with the moon (soma). In a meditation taught in the TA, Abhinavagupta expands on this triad:

Now as for the Supreme, as it is called here, there is a meditation on it. The light, the freedom, whose essential nature is consciousness contains within it all principles, realities, things. This light abides in the Heart. It has been described in this way in the Trisiro-mata: The knower of truth sees that reality within the Heart like a flower within which are all external and internal things, a flower shaped like a plantain bloom. He should meditate with undistracted mind on the union there in the Heart of the sun, moon, and fire. From this meditation, as from the agitation caused by two firesticks, one comes to experience the oblation fire of the great Bhairava which expands and flames violently in the great firepit known as the Heart. Having arrived at that effulgence of Bhairava, which is the possessor of the powers and full of the powers, one should contemplate its identity with the abode of the knowing subject, the means of knowledge, and the known object. That triad is the very same triad as the triad of powers of fire, sun, and moon, as well as that of the always arising powers of Para, Parapara and Apara.42

In this rich description, the Heart is seen as a sacrificial fire-pit within which the light of consciousness continuously blazes and flames. Here the triad of sun, moon, and fire, which is to say, the knower, the process of knowing, and the object of knowledge are intertwined. The light of the Ultimate flames in the Heart like a flower, specifically, like a plantain bloom, which is a thick, dark red blossom. The Heart is also often referred to elsewhere as a lotus blossom. The phrase "lotus of the Heart" (hrtpadma, hrdambhoja) becomes almost a stereotypical phrase in the Indian tradition. Nevertheless, it is fraught with symbolic meaning. The creative ocean in the Heart nourishes the growth of the plant, the cosmic tree that represents the entire manifest universe. The Goddess who abides in the Heart is often represented in Hindu ritual by a pot full of water from which emerges a single mango leaf. This image of verdant growth and creativity springing from a seed nourished by water resonates with the organic interconnectedness of all things as they emerge from the reality in the Heart that is represented by the 'seed' of sound, that is, the mantra of
the Heart. The following PT verses describe this potential presence of the universe in the 'seed':

Just as the large tree is to be found potentially in the banyan tree seed, so this world, both inanimate and animate abides in the 'seed' of the Heart.\footnote{43}

In the process of describing the meditation to be performed on this 'seed' of the Heart, Abhinavagupta describes the Heart as a lotus:

This Heart which moves in the midst of the lunar stations made up of time - of the All - is present in everything in the form of an undifferentiated self-referential consciousness; one should continually meditate on this seed of the Heart as having penetrated into one's own Heart, into one's consciousness, which is in the form of the lotus-flower because it plays at expanding and contracting.\footnote{44}

Aside from this vegetable and arboreal symbolism, there remains another link between the Heart and the lotus. This other link is occasioned perhaps by the fact that the central cakra appears to be shaped like a lotus when perceived by the subtle vision of the yogin. This link might explain the antiquity of this lotus image which has occurred persistently for many centuries, at least as far back as the texts of the Upanisad-s.

AHAM

Every one of these natural metaphors for the Heart has pointed to the nature of the transcendent Ego, the point of free and self-illuminating consciousness that resides in the Heart and is known as the AHAM. The symbolic meanings of the phonemes, especially the vowels, have been sufficiently explored to show why this particular term would have been an especially powerful representation of the triadic reality of the Heart, Siva, sakti, and the finite being (nara). The first vowel of the term for the 'I', is A, representing the anuttara - the infinite, unbounded reality of the Ultimate. The next vowel may be seen as both the visarga, AH, and the last phoneme, HA. As the visarga, this portion of the egoity represents the Emissive Power of manifestation of the Goddess. As the last phoneme, HA, the entire range of manifestation is represented from its beginning in the anuttara to its culmination in the last phoneme. In addition, the phoneme HA is said to represent the liberating energy of the kundalini. Finally, as the last portion of the manifestation, the finite self, represented by the bindu, may be seen as the turnaround point for
the process of manifestation. From here the individual practitioner may employ the energy of the visarga to return to the Ultimate. Abhinavagupta explains this process of analyzing the AHAM and its corresponding mirror image, MAHA, the great, in a long passage from the P7V, which is worth quoting at some length:

Truly, this entire universe which is made up of material elements, senses, pleasure, pain, body, breath, individual awareness and consciousness, abides in the one, supreme consciousness of Bhairava, the Highest Lord. It abides there in an undifferentiated fashion simply as awakened consciousness. Now, this form, structured out of awakened consciousness, is indestructible, for if it were to disappear all would become darkness. Nevertheless, even then, there is no separation which, as is known, is based on a mutual nonexistence. Beings abide truly as the universal spirit. If they did not reside in it, a breakdown would occur in the primary intention which moves the appropriate activity of the sensory organs. Thus, there is simply no separation to be found there, only the unbroken cognition of the 'I' alone, which causes all differences to disappear. While the 'I' is the origin of all beings, in this state the appropriate manifestations of objectivity have not yet arisen. So if one can clearly abide there, then one attains repose. This is the kaulika function. Then this entire universe made up of the thirty-six principles is manifested from Siva by his own power. Siva's most important aspect is the supreme sakti. He is the possessor of that sakti, whose nature is consciousness, the universal vibration. In him it reposes in the essential form of the Self, in the chiefmost sakti, as a vibration of difference within Bhairava. Therefore all beings rest in the essential nature of the Self. As it says in the verse which reads, "In which all this exists . . .", this is the Supreme, the essence of power and sovereignty, the great which is composed of consciousness and freedom. Even though in reality it is one, when it is being investigated for the purpose of entering into the various methods and instructions, the Supreme Lord separates that which is essentially one and makes a universal distinction the nature of which is Siva and sakti.

That which is mine, in the space of my Heart, where, in what kind of essential form does it abide? This Heart is the abode, the dwelling place, the resting place of all beings. That which is mine, belongs to the perceiving subject. For of all existing appearances beginning with blue and extending as far as the worm, there is nothing whatsoever which may be termed blue, and so on, unless it be penetrated by a portion of consciousness. So "my" consciousness attains a portion of the uninterrupted astonishment and then, when it encounters blue, it experiences, "Blue appears to me."

That which is the space of the Heart which belongs to me, in which are found all beings within the infinite, there the entire universe, whose nature is represented by the sound MAMA (mine), has gone, and is completely held. But when it abandons its differentiated nature the space becomes empty. Then my Heart takes on a double nature, which is both differentiated and
This remarkable analysis of the nature of the transcendent egoity summarizes many of the themes that we have been exploring at some length in this book: the primacy of consciousness as the matrix in which the entire display of manifestation occurs; the mutual encapsulation of the supreme consciousness and the manifested universe; and also the kaulika function that abides in the Heart and that provides in the very nature of consciousness itself (that is in the AHAM which is also that which is mine, MAMA), the ascending and effortless path of absorption back into the Supreme. Standing between the Supreme Siva (A), and the manifested universe (AM) is always the Goddess (AH, HA) who mediates and energizes the exchanges between the highest and the manifested reality.

In addition, this passage points to the most intimate and elusive sensation of personal identity that marks all experiences. This is the mystery of the 'I', which delicately stands behind each and every perception. Abhinavagupta shows that the entire universe arises and has its being within that consciousness that abides, in its most universal form, in the space of the Heart. When, during the practice of meditative absorption, the sadhaka leaves behind the experience of body, perceptions, sensations, thoughts, and feelings, he comes to the pure and undifferentiated abode of the 'I', which he unhesitatingly recognizes as the supreme Self.

This passage forms a basis for the consideration in the next chapter of the nature of mantra, which condenses within it the salvational energy of consciousness. This energy, known as the mantravirya, the potency of the mantra, is directly related to the T. As Abhinavagupta says:

In the pure and natural cognition of the form of the mantra, the 'I' itself is manifested, thus say the ancient masters. This is the very essence of illumination of light. This, in fact, is the very force of all the mantras, whose nature is the Heart. Without this they would be as if inert, like living beings without a heart.
Similarly, in the PTv, Abhinavagupta explains:

The tantric practitioner who has penetrated into the Heart whose essence is pure existence and potency, who because of the particular efficacy of the practice of the ritual of adoration is capable of remembering perfectly the mantra, thus attains to a very high degree the potency of the mantra which is the reality known as the Heart. By the peculiar efficacy of the ritual of adoration he crosses over completely, either by himself or as a result of the clear and pristine lotus-word of the teacher, and obtains the power of the mantra, whose essential characteristic is the Heart, and in this way he attains liberation in this very life.48

Let us now turn to a more detailed analysis of the nature of this concept of the Heart-mantra.
The PTlv ends by stating that the principal truth it teaches is the Heart. This is an ambiguous statement because the term hrdaya names both the Ultimate reality of Siva and the mantra that constitutes the principal instrument for reaching this Ultimate reality. As a result of this ambiguity, the text alternates between a discussion of tantric cosmology, which places the Ultimate in relation to man, and an exposition of the tantric sadhana, which clarifies the methods that must be employed in order to come to the experience of the Ultimate. We have examined in some detail the notion of the Heart as Ultimate. In this chapter we shall consider the Heart as mantra.

The idea of the Heart as mantra culminates a process of compression and simplification in the field of religious practice that is first announced, in the non-dual Kashmir Shaiva tradition, in Utpaladeva's IPK. Toward the end of this text Utpaladeva introduces the notion of a new, easy path (sughata marga nava). We need not trace the long process of development in the Indian tradition that leads to this idea. Of course this idea appears quite generally in a number of older tantra-s, and is not necessarily an exclusively Kashmiri idea. Suffice it to say that a complex process of development culminates in a consolidation and simplification of the tantric sadhana to such a great extent that it becomes possible, for example, for a PT verse to announce that all that is necessary for the attainment of liberation is the proper reception of a single bija-mantra:

He who is not born of the yogini, who is not Rudra, does not clearly obtain this
Heart of the God of Gods, which immediately grants both liberation and union. (commentary)

He who obtains this seed-mantra, in the very moment he obtains it, is no longer a bound creature. Because, when this seed-mantra is obtained, for him this Heart is produced. This Heart is the very condition of Bhairava. For that reason, as long as he is not born from the union of the pair - from the union of Rudra and the yogini that is to say, as long as he has not opened his vision to the very Self, or in other words, until a "descent of energy" (saktipata) has not fallen on him, how then could this Heart appear to him?²

The PTlv presents this single mantra as a uniquely powerful and liberating religious vehicle. Abhinavagupta's commentary on the PT verses aims at clarifying the context in which it becomes meaningful to use the mantra as a short and easy path. The commentary presents the theoretical structure within which it becomes permissible for the entire process of sadhana to be reduced to the reception of the Heart-mantra. This simplification of the path does not imply that the Tantra, in its non-dual Kashmir Shaiva inflection, does not retain a uniquely baroque complexity in its theoretical and ritual formulations. Indeed, it is perhaps in direct reaction to its own complexity that the tradition develops a countervailing short and easy path that peacefully coexists with the bewildering technicalia of the Tantra. Yet the PT verses insist on the centrality and importance of the Heart-bija:

He who has correctly carried out the procedure of adoration, and who remembers the seed, he successfully accomplishes his goal. The seed which has no beginning and no end, which moves in the midst of the stations, expanding, this he should meditate in the lotus of the Heart, and always practice the rays of the moon. Whatchsoever desires he may long for, he will quickly obtain them. Immediately he is placed face to face with That, and obtains omniscience. Of that there is no doubt. Thus one obtains the fruit of the mantra, and therefore this is the Union of Rudra (Rudrayamala). Perfection (siddhi) comes as a result of it and the attainment of omniscience.³

No doubt, there is a certain equivocation in the PTlv when it states that the reception of the mantra constitutes liberation. We know that the mantra is said to be essentially composed of the force and power of consciousness. This force is precisely the AHAM, the 'I', to which the practitioner aspires in order to attain liberation. When Abhinavagupta states that liberation is achieved as soon as the mantra is received, his initial meaning is that the eventual attainment of liberation is assured. In addition, he also means that once the practitioner has truly come to pronounce (uccara), to remember (smaran), the mantra, this attainment will coincide, in effect, with the attainment of liberation. The true attainment of the mantra in this sense means the acquisition of the very force and power of
consciousness itself. Thus, in the *sadhana* presented in the *PTlv*, method and goal eventually coincide because the essence of the *mantra* is identical with the goal of the tantric path.

This chapter will first examine the context of the *mantra* - the teacher who imparts it and the initiation through which it is imparted. We will then turn to investigate two aspects of the Heart-mantra: (1) the theoretical justification given for the use of a *mantra* in the attainment of liberation and (2) the meaning and symbolism of the *mantra*, especially as it is structured out of the three phonemes that compose it. In order to best understand the role of the Heart-mantra as it is set forth in Abhinavagupta's writings, we should begin by a brief review of what he has to say about the nature of the *guru* and the process of initiation (*diksa*). We will then go on to a more detailed discussion of the theoretical aspects of the nature of the Heart-mantra.

**Guru**

In any discussion of *mantra* one immediately encounters the fact that the *mantra* is something that is given and received in the context of an initiation. Abhinavagupta clearly warns against the use of just any *mantra* that has been simply learned from a book. From the discussion of *mantravirya* in the previous chapter it is clear that the non-dual Kashmir Shaiva tradition considers the empowering of the *mantra* by the enlightened consciousness of the teacher as the essential feature of the *mantra*. This empowering ensures the *mantra*'s efficaciousness as a salvational vehicle: it is only then that the *mantra* is considered to be soteriologically effective. This conviction has persisted into the modern period. Bharati, in surveying the tantric tradition up to the modern period, finds that it remains necessary that *mantra* be defined as that which is given in the context of initiation by the proper teacher. The various mantric "sounds" written in books, engraved in sculpture, or casually spoken are, therefore, not technically *mantras*.\(^4\)

In addition to the *mantra* and the process of initiation, there is always someone who performs the initiation. This 'other' who initiates may be a human *guru* or it may be Siva himself. In fact, the *guru* is always taken to be Siva incarnate by reason of his condition of enlightenment. However, there are occurrences of a kind of spontaneous initiation by the 'inner' *guru* of the Heart who may appear to the *sadhaka* in a vision or a dream and initiate him into the use of the appropriate *mantra*. Even here, however, where there is no apparent 'external' teacher, initiation is effected by a higher power which is experienced by the *sadhaka* as other than himself. Abhinavagupta makes reference to this process of spontaneous initiation
in the TA, and describes a direct process of learning from the great Lord who resides in the Heart. The knowledge that is gained in this direct way is often compressed into the powerful form of the mantra.

We have already encountered the notion of the spiritual family composed of the guru, his wife, and his disciples. This 'family' (kula, but more technically samtana) forms a self-sufficient unit whose foundation lies in the awakened self-referential consciousness of the teacher. The teacher, says Abhinavagupta, is only consciousness. It is especially as a result of his condition of realization that the guru is considered to be an authoritative teacher. That is to say, even if the guru is not learned in the sacred scriptures, his condition as a realized being awakens within him a perfect knowledge of the meaning of all the sacred scriptures. As a result, the primary characteristics of the guru are the achieved condition of realization, which he lives on a day-to-day basis, and his capacity to transmit realization directly to his disciples. Moreover, it is precisely this type of teacher, known as the "spontaneously-perfected" teacher (samsiddhika-guru), who seems to have been preferred by Abhinavagupta and the Kaula tradition. This sort of teacher was preferred because he was thought to have been initiated directly by the Goddess of his own consciousness.

This preference may be a kind of autobiographical revelation on Abhinavagupta's part by which he indicates, in a roundabout way, that his own massive intellectual capacity results from the power of his own enlightenment, and not the other way around. Nevertheless, the relationship between intellectual insight and spiritual attainment remains a complex issue because Abhinavagupta does not disparage the power of the intellect (bauddhajnana) as it contributes to the realization of Siva (paurusajnana).

According to Abhinavagupta, in the final analysis it is the graceful will of Siva that awakens in an individual the desire to attend upon a good teacher. It is also Siva's will that leads the individual to a particular teacher so that he may obtain both enlightenment and the enjoyment of fulfilled desires. The most important step the willing disciple must take is to search out and arrive at the feet of the teacher.

The SSV states: "gurupayah" that is, "the guru is the way," and he is the only method that is needed. This sutra may be read in two different ways. In its first interpretation, "the guru is the method," it means that a willing attendance upon the teacher is the sole prerequisite for the achievement of liberation. On a surface level, this means that the guru will then make himself responsible for the training of the disciple, and will lead him through the various disciplines and practices that will secure for the disciple the realization of liberation. On a deeper level, however, the statement that the guru is the method reflects the idea that the guru represents the embodied wholeness that is the goal of the sadhaka. The face-to-face
meeting of the disciple and the guru does not represent merely an encounter between two separate beings, one of whom happens to be enlightened and can thus aid and help the other in the search for enlightenment. Rather, by entering into a relationship of service the disciple places his finite awareness in direct confrontation with the enlightened consciousness of the guru, which is the same unbounded consciousness the disciple wishes to attain. This meeting of the finite and infinite modes of consciousness represents the very condition of vimarsa, of consciousness doubled back on itself. We have already seen that it is the aspect of vimarsa that generates the kaulika function, the ever-functioning method of realization that abides perpetually in the Heart. As the disciple comes face to face with the guru, his finite consciousness encounters its own powerful and expanded source in the person of the teacher. In this situation, and without any conscious effort on his part, the disciple activates within himself the kaulika function. In this way devotion to the teacher represents the ideal spiritual posture for the disciple. It replicates, both externally in the personal connection established, and internally in terms of the inner meditative current that is released, the liberating, graceful, and self-referential nature of the unbounded consciousness of Siva.

However, the sutra we are considering, gurupaya, may also be read as stating, "the method itself is the teacher." In this reading the implication seems to be that the method is the only teacher necessary. Once the disciple has been initiated into the method by the human guru, the very presence of the Heart-mantra in his awareness is thought to be enough to elicit from consciousness itself, or from the guru in the Heart, all the direction, guidance, and knowledge that is necessary for the satisfactory attainment of the goal of the path, the condition of freedom in life (jivan-mukti). In this way, though the teacher binds the disciple in service and obedience, as well as in dedication to a set of practices and disciplines, the purpose of this binding is the attainment of freedom. From this point of view, by binding the disciple to the method, the teacher sets the disciple free. He replicates in the sadhaka the autonomy and self-sufficiency he himself enjoys. As a result, the non-dual Kashmir Shaiva tradition places great emphasis on three methods that become teachers to the practitioners, and that will progressively further his liberation.

These methods involve the cultivation of the initial impulse of grace or descent of power (saktipata). It is this impulse, in the form of the will of Siva, that has taken the disciple to the feet of the teacher. The relative strength or weakness of this impulse, as gauged by the teacher, differentiates the different grades of sadhaka-s. If the saktipata is violent, then an instance of the nonmethod (anupaya) occurs that involves no effort of practice or cultivation. Rather, the bound soul (anu) is instantaneously
freed from its bonds, and, if the saktipata is extremely violent, immediately abandons the body.  

However, if the saktipata is less violent, it must be cultivated, as it were, and made to bear its whole fruit by one of three methods. The first method is known as the "atomic" (anava) method, and employs the active-creative function of Siva, the kriya-sakti, which forms one of the angles of the triangle of the Heart. This atomic method employs what correspond roughly to the external limbs of Yoga (bahir-anga) as set forth by Patanjali in his Yoga-sutra: physical postures, various breathing exercises, and the first rudiments of meditation. When the sadhaka has gained sufficient proficiency in this method, he then advances to the method of power (saktopaya) in which the cognitive function of Siva (jnana-sakti) is brought into play. This may best be understood as an advanced stage of meditative accomplishment that ranges in the zone of transition from the very subtle internal apprehensions to the pure, nondifferentiated (nirvikalpa), contentless consciousness transcending all of the activities of awareness. The third and final method, known as Sambhavopaya, that is, the method relating to Siva or Sambhu, employs the iccha-sakti, the impulsive function of the Heart. It is here that the practitioner fully employs the visarga by releasing himself into the inwardly flowing, expansive current of consciousness. Once the sadhaka has reached this stage he has become a vira or spiritual hero.

These three methods become the disciple's teacher in the sense that they progressively lead the practitioner to advance to higher stages of development. No sharp differentiation is established between these methods, and they shade imperceptibly into each other. At the core of each of them is the increasingly more fruitful employment of the mantra, which has been received through initiation.

Initiation

There are numerous descriptions of various sorts of initiation in the TA. The abundant variations in these rituals preclude a detailed discussion here. However, one passage that describes a rather advanced initiation for the empowerment of a new teacher, in which the transmission of a mantra plays a crucial role, follows.

Portion of a Rite for the Empowerment of a New Teacher: The subtle breath which rises up from the heart of the master, and which is like the moon or a crystal, or a very fine thread, is composed of sound, which serenely travels along the series of centers until it comes to rest at last in the
**The Triadic Heart of Siva**

*dvadasanta.* The *dvadasanta* is the terminal point where the *susumna* comes to an end. The *susumna* the central pathway of the three paths. At this point, after having caused his heart to overflow, the teacher must recite the *mantra,* which then blazes brightly like a submarine fire and bursts forth from his eye sockets and skin pores, until filling the tranquil top knot, in which are melted the streams of clarified butter, which has been propitiated and satisfied by the streams of clarified butter. The *mantra* then reaches the disciple's heart. In this way *mantras* give liberation when they are awakened and completely purified. In whatever center the *mantra* is then recited, whether it be the root, the bulb, the ether, the navel, the heart, the throat, the forehead, the palate, the half-moon, the obstructor, the sound, the limit of sound, the pervading one, the power, the equalized one, the transcendent, or the supreme center of the purified Self, in short, in whatever center, and whether all together or separately, that *mantra* is then the supreme *mantra.* This is the wisdom-vow described in the *Devya-yamala-tantra* which has as its purpose the establishment of the potency of *mantras.*

Just as the continuous doubling back of consciousness upon itself generates a sounding, a vibration, which is the *sakti,* so too the face-to-face meeting of the *guru* and the disciple, as pure consciousness and the finite mind, produces a powerful vibratory sound which emerges from the depths of silence of the *guru's* consciousness. This 'silent' sound which is charged with the potency of consciousness, of the 'I', is the *mantra.* It constitutes the sound-form of the Goddess, who then enters the boundaries of the *sadhaka's* finite mind and begins to work a process of expansion that will lead to the full manifestation of *saktipata.*

The *PT* verses describe true spiritual knowledge as possessed of an independent initiatory character that is efficacious even if the external forms of the ritual are not performed:

> He who thus truly knows has received an initiation that leads to *nirvana,* undoubtedly, even if he is deprived of oblation, of melted butter, of sesame seed.

In the comment on this verse, Abhinavagupta emphasizes the traditional etymology of the term for initiation, *diksa,* which traces the word to the two roots *da,* to give, and *ksi,* to destroy:

> Therefore initiation is characterized by a giving and destroying and its essence is a condition of clear insight. The sesame seed, and so on, are there of no use whatsoever. So far, the sense is that for the one intent upon being entirely in the highest perfection, whose nature is the state of being liberated while still alive, except for the attainment of the seed of the Heart, there is nothing at all that is of any use.
Initiation, as envisaged in the *PTlv*, centers upon the reception of the Heart-mantra. It destroys the bondage that keeps the *sadhaka* in ignorance as well as bestowing a clear insight into the nature of the transcendent Self. It is clear from this passage and others like it that the external ritualistic paraphernalia of initiation are of secondary importance in comparison to the central cognitive component centering on the *mantra*. In another verse of the *PT* the *mantra* is extolled as leading to perfection in all three periods of time:

By means of that Heart certain possessors of the *mantra* have become perfected, some will become perfected, and some are presently leading others to perfection.\(^{19}\)

In the comment to the next verse Abhinavagupta clarifies that the principal object of initiation is the destruction of doubt. This destruction opens the way to the cognition of "that which has one taste" (*ekarasa*):

Here, what is to be perfected is only the attainment of that *mantra*, but neither vows nor formulas are of any useful assistance whatsoever. The only thing of any use here is the complete destruction of the disease of doubt, because doubt, the essence of which is uncertainty and error, is the principal obstacle to an absorption whose nature is the cognition of that which has one taste.\(^{20}\)

The unified perception of all manifest reality as composed of Siva and the destruction of the bonds resulting from finite differentiations are the goals of the process of initiation. A unified perception resulting from the destruction of the bonds of difference bestows on the disciple the status of a *yogin* and of a possessor of extraordinary powers:

Whoever knows truly, even though he may not have seen the *mandala*, is forever united with the extraordinary powers, he is a *yogin*, and he has been initiated.\(^{21}\)

In the rich comment to this verse Abhinavagupta emphasizes the power of initiation. He responds to those who would uphold the primacy of ritual by initially agreeing with them, but he then undercuts their position by declaring the superiority of the *mantra*:

The various ritual regulations which concern the sacrifice, this is what must be accomplished, but even if he is ignorant of these, he becomes one who knows what must be done because of the acquisition of the complete fruit of the *mantra*. He who does not know as rules the well established rituals of the other schools—Ordinary, Vedic, Saiva, Left-Handed, Right-Handed, Kula, and so forth - he indeed here in the sacrifice becomes a knower of the ritual method because he
knows the "method" of the Ultimate. With respect to the Ultimate, which is only consciousness, all other things are extraneous."

Initiation, as we can gather from these passages, involves the acquisition of a type of knowledge. Here, however, knowledge does not refer to specific or isolated fragments of information. Initiation is not the transmission of any specific fact or technique. It is rather the transmission of the infinite Self. More precisely, it is the process by which the initiate gains access to a true knowledge of the Self that he already is. By means of initiation, the sadhaka is opened to the nirvikalpa condition of immediate perception of the unboundedness of Siva. There is a sense in which he is 'infected' with the germ of infinity, with the 'seed', which will sprout into the acquisition of the state of enlightenment. This seed, which will ultimately grant him the freedom and spontaneity of an embodied Siva, is transmitted to him in the highly charged and compressed form of the mantra.

**Mantra**

As taught in the PTLv it is clear that the principal purpose of the Heart-mantra is the attainment of the freedom of consciousness: the mantra is a means towards liberation. In the context of meditation, the mantra is instrumental in reaching the nirvikalpa condition, or in the vocabulary of the Yoga-sutra, the asamprajnata samadhi. However, in the attainment of this state, which is often called nirbija (in which the 'seed' or mantra has disappeared) the mantra, as a specific thought-form, must be abandoned, or rather it slowly melts into the unconditional freedom of pure contentless consciousness.

The Heart-mantra, SA UH, is a bija. This particular bija may be found in various combinations with "meaningful" words (namah, Sri, etc.). Modern scholars have exercised themselves as to the origin and classification of the various sorts of mantra-s. The tradition itself does not ignore the problem of classifying the bewildering variety of mantras. One such classificatory attempt appears in the PTLv:

For this reason, the matrka is the source of all mantras. It is the cause which consists of an undivided self-referential consciousness; whether it be of mantras whose meaning is hidden, bija-mantras, that is seed-syllables, or pinda-mantras consisting of groups of syllables such as the catuskala or navatma, and which are determined by a male divinity which they express; or whether it be the vidyas, such as the garland-mantra-s, such as for example, the mantra namah-sivaya, whose meaning is clearly known to all, and which are determined by a female divinity which they express.
Here Abhinavagupta distinguishes between mantra-s whose meaning is hidden and those whose meaning is clearly known. He also distinguishes between mantra-s that express a male or a female divinity. The scheme is not without its problems, but it does demonstrate that the tradition itself was well aware of the need to rationalize and bring some sort of order to the proliferation of mantra-s.

The bija-s as a class of mantra-s present an interesting problem of interpretation. Early scholars of the Indian tradition criticized these sounds as a kind of "senseless mumble-jumble of words." Modern scholars have modified this view by tending to classify them as quite literally "non-sense" syllables. This latter view is more in accord with the tradition's own view that, in terms of the structure of everyday language, these syllables are not assigned a conventional meaning. They are in a technical and non-pejorative way "non-sense" or meaningless syllables. To say this is not in any way to impugn the importance or religious significance of the bija-s. Moreover, that certain of these syllables bear a close resemblance to Sanskrit verbal roots or words is not, for the tradition, particularly relevant. Toward the end of this chapter we shall examine several passages from the non-dual Kashmir Shaiva tradition in which we find displayed a sophisticated method of analyzing the bija-s. This method allows for the assignation of symbolic meaning to each of the phonemes that compose the bija-mantra without thereby overburdening the bija itself with a conventional signification that would negate its efficacy as an instrument for the attainment of nirvikalpa. We find that in this method the tradition itself gives an important line of investigation as to the structure and symbolic content of the bija-s to which we should closely attend. In addition, the process of breaking the bija-s down into component phonemes, each of which is assigned a symbolic name, allows authors to convey mantra-s in their texts without explicitly spelling them out. By generating a kind of mantric cryptogram, the tradition is able to conceal the exact mantra from those who do not know the equivalent phonemes for the symbolic names given in the texts. At the same time, the tradition is able to reveal, for those acquainted with the equivalences, a certain sequence of symbolic meanings out of which the mantra is structured without thereby assigning a conventional meaning to the bija itself. The Heart-mantra, it will be seen, is conveyed in just this way in the tradition's texts.

**Mantra Theory**

A mantra is a unique piece of language that is transmitted from the guru to the disciple. In order to understand the rather peculiar nature of
this language-fragment it is necessary to understand the nature of the tantric conception of language.

The sophistication of the tantric treatises, especially the tantric works of Abhinavagupta, is such that they exhibit a great deal of self-consciousness about the nature of the language and the use of language as a religious tool. By utilizing what may be termed a kind of phoneme mysticism, the Kaula lineage assigns a dense doctrinal baggage to these smallest of language units.

The non-dual Kashmir Shaivas view the process by which our daily reality is manifested from the infinite reality of Siva as a 'sounding' forth. This uttering of reality, an emitting of reality, or even a vomiting of reality, takes place as part of the agency of the power of Siva. This power is the visarga-sakti. Thus, the daily world we inhabit and the common-sense meanings of the language that we use to describe it are in some sense coextensive. This result mirrors the identity of Siva with the supreme word, the para vak.

The details of this process of the sounding forth of reality are complex and would require an extensive survey. Briefly, the process apparently occurs on four levels which correspond to the four levels of speech (vak): pars, the supreme level; pasyanti, the first "vision" of what is to come; madhyama, the intermediate stage; and vaikhari, the fully embodied stage of everyday speech. In this way, language, like reality, runs the full gamut from the level of supreme nonmanifestation, where we may speak more aptly of a silence that abounds in possibilities, down to the fragmented, divided, and conventional level of everyday expressions.

By inviting us to see and identify only small portions and artificially isolated pieces of the total reality, language creates the very condition of error, of incomplete perception (apurnakhyati), that binds us in ignorance and suffering. On one level, language represents a large part of the "problem" of spiritual bondage.

Since language at its highest level is identical to the supreme reality, however, we may use that which binds us as a tool for awakening and liberation. On a technical level, the most potent tantric instrument for liberation is a small unit of language, the mantra. The specific mantra taught by Abhinavagupta in the Pīlv, SAUH, contains the visarga as its final and perhaps most potent element.

The mechanism by which the mantra accomplishes the task of enlightenment is explained in the following way: In terms of its consciousness, the individual soul (anu) is caught between the total inertia of a rock and the omniscience of Bhairava. We have seen that it is the function of the four sheaths (kancuka-s) to suspend the anu in the middle, like the mythological character Trisanku. The Pīlv states:
The Heart is the seed of the universe devoid of beginning and end, devoid of coming into being and destruction. Because it is a seed, it expands into the form of All, it moves incessantly to expansion. This Heart which moves in the midst of the lunar stations made up of time - of the All - is present in everything in the form of an undifferentiated self-referential consciousness. He should continually meditate on this seed of the Heart as having penetrated into his own Heart, into his consciousness, which is in the form of a lotus flower because it plays at expanding and contracting. He should meditate on this seed which, having entered into his consciousness, causes it to expand by bringing about the removal of the form of contraction. In this way there occurs the attainment of Bhairava in all its fullness.  

This continuous movement of expansion present in the very core of reality is the visarga. Naturally, the expansion is accompanied by a counterbalancing movement of contraction. The visarga is always conceived in polar, rhythmic terms. As we have seen, this dual nature accounts for its being termed the Rudra-dyad, the Rudra-yamala. The P77v continues:

The initiated one knows this supreme knowledge whose characteristic is the Heart, and which is given by the divinities of Bhairava, who are within the Heart, and who bring an escape from the vibration of manifestation which leads to the obscuring of the Self, and are rather directed towards the supreme vibration which consists of an opening up of the Self. These same divinities destroy the chief bond which is the state of contraction.

The vibration that leads to manifestation is, in terms of consciousness, the contractive aspect of the visarga, and the supreme vibration that discloses the self is the expansive aspect of the visarga. Abhinavagupta tells us that the purpose of the mantra is to cause consciousness to vibrate more quickly. He argues the efficacy of bija-s as salvational instruments in these rather crucial verses in the TA:

All the more reason that the group of seeds which, because they are independent of the constraints of convention, cause consciousness to vibrate thus constitute a valid means for the attainment of consciousness. Because of the nonexistence of meaning to be expressed, because they vibrate in consciousness in a way that is totally indifferent to the external reality, because they are self-illuminating, because they cause the extinction of the movement of the vital breath - for these reasons the group of seeds are completely full and self-sufficient.

The operative phrase here is samayapeksam vina: the bija-s as a group are without conventional meaning. It is precisely for this reason that they may serve as a method (upaya) for the attainment of consciousness. They cause consciousness to vibrate (spandayanti). Other features given by
Abhinavagupta emphasize the bija-s lack of verbal meaning (vacyabhavad), their independent vibration within consciousness (udasinasamvitspandat), their self-sufficiency or self-illumination (svadhamatah), and their ability to cause the extinction of the movement of the vital breath (pranollasaṇīro-dhāḥ). This last characteristic is important in that it provokes the entrance into the central channel of the susumna with the resultant attainment of the nirvikalpa condition.

In terms of the mantra, the process involves harnessing the power that resides in consciousness and allowing the finite mind to vibrate more quickly, to expand and to reach the fast vibration that characterizes the state of Bhairava. The attainment of this state is synonymous with the condition of jīvan-mukti. It is in this way that Abhinavagupta explains the theoretical underpinnings of the Sambhavopaya. The method that relates to Siva or to Sambhu (Sambhava) employs nothing else but the visarga, which can be understood as an impulse or power within the Heart. Once consciousness has been successfully doubled back upon itself, this power begins to operate and leads the sadhaka toward the Ultimate. When the sadhaka has reached this stage, he has become a vīra, a spiritual hero, who is able to unite with the Goddess. He is one who is able to surrender gracefully, completely, and effortlessly to that centripetal motion of the Heart, the gravitational pull of consciousness on itself, which plunges him back into the depths of the ocean of consciousness. At this point the vīra may, if he so desires, consolidate this unification with the inner Goddess in the context of the secret ritual known as the kula-yaga.

Finally, the siddha may find that the power and stability of his enlightened condition render him capable of serving as a vehicle for the expression of the sacred texts of the tradition, known as the agama-s. The word agama means "something that has come forth." These texts are usually considered to be anonymous, but not in the sense that they have come forth or come down to us from a remote, ancient, or unknown human source. The agama-s come forth as pure expressions of the supreme level of speech, the pari vak: they arrive by a graduated process of stepping down through several levels the fast vibration of the highest consciousness. This process is sometimes expressed by the tradition in the notion that there are usually several versions of an agama, each successively shorter, more compressed, and more accessible to human understanding. The siddha or siddha-s who served as vehicles for the manifestation of these texts did not consider themselves to be the authors of the texts. Rather, they served as relay stations for the transmission of the Ultimate truth. The texts simply make available in the form of understandable language the truths and totalities of the Ultimate. Hence, the texts are seen by the tradition as representing the pure essence of the Ultimate manifested and expanded into language.
The Emissional Power in the Heart responsible for this manifestation is hypostatized as the supreme guru who teaches the particular yogic and tantric methods found in the texts. Specifically, the teacher in the Heart functions as the source for the especially powerful and important religious instruments that are the mantras. While on one level language may be the source of error, at another, it is the source and expression of enlightenment.

We will now turn to an examination of the nature of the Heart mantra itself in more detail.

The Heart as Mantra

The first description of the Heart-mantra in the PTlv occurs in a kind of cryptographic form. The mantra itself is not spelled out. Rather, code terms for the specific phonemes that compose the bija are set forth and it is left to the reader to piece the mantra together. Let us see how this functions:

O beautiful one, the Heart of the Self of Bhairava is the third brahman. It is united, O fair hipped one, with the fourteenth phoneme, and it is followed by the last of the master of the lunar stations. (S-A U-H)  
(commentary:)  
The third brahman (5), whose nature is the Sadasiva principle, and whose essence is the light of Aghora, is characterized by the entire group of knowable objects, in a condition in which their "objectivity" has not yet become clear, which is to say, the totality in the form of Being (sad). This third brahman is continually fused, connected with the fourteenth vowel (A U), as well as reposing, that is, being inseparably connected with, that which is the end, in the sense of ultimate basis, of the lords of the stations, of the Fifteen vowels, reposing, that is, on the visarga (H). This is the Heart of the essence of the Self of Bhairava, that is to say, of the blessed group of sounds which has the totality as its body.  

The clues given in the PT verse as well as in Abhinavagupta's commentary are sufficiently obscure that it is conceivable that a reader who was not alerted to the fact that this verse is spelling out a mantra might miss it altogether. In the Sanskrit the verse is even more opaque than the above translation might suggest. All that the PT verse gives as clues are (in this order): "the fourteenth," "the Lord of the lunar stations," and "the third brahman." It is Abhinavagupta who specifies in the commentary that "the fourteenth" refers to the vowels (svara), and that "the Lord of the lunar stations" is the visarga that goes at the end of the mantra. The most difficult reference is to the "third brahman." Abhinavagupta links it to the Sadasiva principle, and to the notion of Being (sad). However, if we
did not know that the pentad of *brahman* refers to the five phonemes at the end of the Sanskrit alphabet, namely, S, S, S, H, and KS, we would be completely at a loss as to the interpretation of the term "third *brahman." Abhinavagupta has explained the concept of the *brahma-pancaka* in the comment to the previous verse when he lays out the *apara visarga-sakti*, but he is silent about it in the comment to this verse.

We receive confirmation that the *mantra* conveyed in this verse has been correctly deciphered by the analysis of the *mantra* as presented in other passages. Abhinavagupta considers this *mantra* to be of sufficient importance to warrant repeating and amplifying his analysis of it in several different places. It will be helpful to examine several of these passages and attempt to understand the complex nesting of levels of meaning that occurs. In the *PTIv* Abhinavagupta devotes a long passage to the Heart-mantra:

Just as when one abandons the manifest expansion of an earthenware jug, all that truly remains is clay. When the manifest form of clay is left behind, all that truly remains is an odor. When the specific form of the odor is not cognized, what truly remains is the T. When such a distinction has been shattered, what remains is an essence formed of happiness, suffering, and error. When these three have been excised, there remain only the forms of the knower and the knowable. In the end, when even the distinction formed by subject and object has disappeared, all that remains is Being (*sad*). Even there, when the cognition of the three phonemes (of the word *sad*) has ceased, there ensues a repose in the first letter *S* alone. Then, this last repose in the phoneme *S*, is also the last repose of All - from the water principle to the *maya* principle - of the entire range of knowable objects which appears in the midst of the impure path. At the moment of this last repose there appears the *brahman*, the All, one homogeneous mass, immortal, which has become the *atman*. This is the last repose of *brahmavadin*-s - the followers of Vedanta. According to us, however, there occurs, beyond that, Bhairava, who manifests the entire universe by means of his activity of churning that state of repose. As it says in the *Bhagavad Gita* (15.3):

> My womb is the great *brahman* and in it I place the seed. From this derives the origin of all beings, O Bharata!

When, because of the disappearance of the distinction of its own-nature, the condition of repose in mere Being is no longer cognized, then Being appears to enter into a condition where it is absorbed into the powers of appearing light and self-referential consciousness. Because, in reality, that state of mere Being is not different from the true nature of such powers - what remains is the true nature of the power. That power is either will, action or knowledge, because nothing at all can appear without reposing on the power of such self-referential consciousness which is "I will," "I act," and "I know."
In the thought "I will" are intermixed the three powers - and in the same way in "I know," and "I act," because they are inseparably connected. Therefore, that which is becoming manifest appears as reposed in the own-nature which is composed of the triad of powers.

The true nature of this triad of powers is one, namely freedom, and because of this freedom, it is a true body made of two dots, formed of two knots, one above and one below, a body made of consciousness, whose nature is the supreme deity, Bhairava. The nature of these three phonemes is that they are composed of three states of repose, respectively, in the knowable object (5), in the process of knowing (AU) and in the knowing subject (H). Depending upon which state of repose one selects, the pronunciation extends as far as that phoneme alone. A threefold pronunciation therefore occurs. There are thus three types of perfection: enjoyment, enjoyment and liberation, and liberation.

When, in reference to an external object such as a pot, the place of repose is a single cognition, then the All, devoid of succession, in the form of Being is emitted, thrown into the Supreme Bhairava, by the power of the will, and that Being residing in the supreme Bhairava, nondifferent from it, by the same power of the will, is emitted outwards into the external world where it assumes the form of the "knowable" objects. This is the abiding in the Emission (H).

The repose in the "Fourteenth" (AU) is the repose in the (three) powers because of contact with both, that is, now with knowable objects whose nature is the Being, and now with the knowing subject whose nature is the Supreme Bhairava.

With the descent of the knower and the process of knowing Bhairava and the power (Hand AU), the repose in brahman (S), that is, a state of undifferentiated identity with the "knowable object" occurs. The reality which unifies, which makes of one taste (ekarasa) this triangle characterized of three Emissions, one appeased, one aroused, and one that is both, and is thus made of three reposes - that reality is the supreme Emissional principle, and it is the consciousness, the Lord Bhairava himself. 35

On one level, this passage may be used simply to confirm that the reading of the mantra as derived from the previous passage is correct. However, it is apparent that Abhinavagupta's intention in this passage encompasses much more than the secret embedding of a mantra into a text. This remarkable passage functions as an important theoretical justification for the specific phonemic composition of the mantra. The passage begins by describing the process of progressively stripping away the attributes and characteristics of any finite object until one is simply left with the sheer existential Is-ness of that object. Abhinavagupta identifies this residual pure Being with the brahman/atman of the Vedanta.

Nevertheless, the non-dual Kashmir Shaiva tradition considers it premature to stop short with this rather inert, if transcendent, Ultimate. Abhinavagupta argues that beyond the level of sheer Being resides Bhairava, seen here as prakasa-vimarsa. Bhairava is never separated from his sakti,
so that beyond the level of sheer Being the supreme dyad of Bhairava and his power is to be found. One of the forms this power, the sakti, takes is the triad of powers, the iccha, jnana, and kriya sakti-s, which are identified with the trident, the fourteenth phoneme, A U.

Abhinavagupta continues by stating that the innermost nature of this triad of powers is the condition of freedom that they enjoy and represent. In turn this freedom manifests itself as the two dots, or knots, which are the devanagari representation for the visarga.

In this fashion, hidden in the fabric of a rather abstruse philosophical discussion, the Heart-mantra is spelled out: the Being, or rather the first letter of the word for Being, sad, gives S, which in the previous passage has also been called the third brahman. The argument about Being gives us the first phoneme of the mantra. Next, the allusion to the power of Siva, and to the specific group of powers known as the trident (trisula), gives us the vowel AU. This confirms the identification of the "fourteenth" given in the previous passage. Finally, the last phoneme is described as composed of two dots, a clear reference to the written form of the visarga. In addition, later on in the passage, explicit reference is made to the visarga.

An additional bonus derived from this passage is that the order of the phonemes composing the mantra is confirmed. Finally, the last portion of the passage gives the mantra backward. Starting with the visarga, it then gives the trisula, and culminates in the Being, now identified with the unifying reality that makes everything "of one taste" (ekarasa).

Ksemaraja paraphrases this entire passage in his Para-pravesika, and adds a few interesting details of his own. The most important confirmation that we gain from Ksemaraja lies in the fact that he deliberately names, in various places, but in proper order, the three phonemes that make up the mantra (sakara, aukara, visarjaniya), although he does not go as far as to write the mantra out.

Thus says the eternal tradition which holds that this world is within the seed of the Heart formed of the supreme noble lady. How?

Just as the true nature of pots and vessels and so on made of clay is nothing but clay, and just as the nature which is in the various kinds of fluids such as water is the same liquid element, so when the true nature of all principles, beginning with earth and ending with maya, is being considered, we find that they are nothing but Being (sad).

With respect to that word sad which is formed merely of the uninfected word, if we eliminate the portion of the suffix which makes clear the meaning of the stem word under consideration, what remains is only the phoneme S. This is the essential reality of the thirty-one principles and is hidden within them. Then come the principles (tattva) of Suddhavidya, Isvara, and Sadadiva, whose essence are the energies of knowledge and action. Because of the predominance
of energy, these principles are contained in that which is composed of the energy of the Supreme, and we thus arrive at the phoneme A U. The phoneme H, the visarjaniya, then occurs in the form of the manifestation which is both above and below.

The essential nature of this Heart-seed thus constituted is the Supreme Siva, who is both transcendent of all and yet immanent within the universe. This is because it is the place of repose of all and that from which all arises, and its nature is the supreme mantra (AHAM). He who truly knows such a seed-mantra and is absorbed in it, he is initiated into the highest reality and, without abandoning his life, continues to exist like the ordinary man. When the body drops off, he indeed becomes the venerable supreme Lord.36

It is not necessary to repeat the analysis of the spelling out of the mantra. Interestingly, Ksemaraja reinforces the connection between the Heart-mantra and the so-called supreme mantra (Mahamantra), as well as repeating the claim that the Heart-mantra is the essential instrument for the attainment of jivan-mukti.

In the following passage from the TA we find that there are two mantras that may be termed Heart-mantra-s:

For that Being (sad, S) is termed the root of brahman, and the egg of maya, but it cannot be called Being if it does not ascend into will, knowledge, and action (A U). Just as it is emitted (H) into the Bhairava consciousness because of an ascending into the three powers, in like manner, it is emitted externally as well. Thus this Being, which is the nature of all beings, is thrown together by the supreme consciousness with the triad of powers and the Emission, and in this way it exists.

That Being which at first has an external form is then dissolved in the fire of awakening (R). What remains as a residue is simply a cognition which is an internal sounding (Ph).

Then it attains an ethereal state (Kh), and because it abides in the triad of powers (e), it goes to the condition whose nature is the pure knower (M) and finally it is absorbed into that whose essence is absorption. This mantra is known as the "Heart of Reabsorption" and the prior is known as the "Heart of Emission."

In the pure and natural cognition of the form of this mantra, the 'I' itself is manifested, thus say the ancient masters. This is the very essence of illumination of light.

This 'I' is the force of all mantra-s whose nature is the Heart. Without this force they would be as if inert, like living beings without a heart."

Once again, the first two parts of this passage give the mantra SAUH, called the "Heart of Emission." Next, the spelling out of another mantra, which is termed the "Heart of Reabsorption" as well as the "Master of the Mass" (pindanatha) occurs. This mantra is reconstructed as KhPhREM. In his
comment Jayaratha supplies clues as follows: the "fire of awakening" is the phoneme $R$ (repha). The "internal sounding" is the crooked consonant ($kutavarna$), also known as the flowery ($phulla$), namely, the phoneme $Ph$. The "ethereal state" is the void ($kha$), that is, the phoneme $Kh$. The "triad of powers" is here not the trident, as above, but rather the $yonibija$, that is, the vowel $E$. Finally, the pure knower is the $bindu$, the phoneme $M$. In this order the mantra would be $RPhKhEM$. According to Jayaratha, this is the ideal order (samvitkrama) of a mantra variously known as the $Matrsadbhava$, $Kalakarsini Pidanatha$, or $Pancapindanatha$. Jayaratha suggests another way of describing this mantra in its ordinary order of phonemes: it is composed of the second phonemes of the second (velar), sixth (labial), and seventh (semivowel) classes of the Sanskrit alphabet. The second phonemes of these classes (if we count the vowels separately as a first class) are the phonemes $Kh$, $Ph$, $R$. To these are then added the $yoni$, $E$, and the $bindu$, $M$. Hence the mantra $KhPhREM$. Once again, as in the previous passage from Ksemaraja, Abhinavagupta stresses the link of this mantra to the T, as it is in the following spelling out of the mantra also from the $TA$:

In the supreme Heart, where the great root, $S$, the trident, $AU$, and the Emissional Power, $H$, have come to be unified, here the yogin attains repose by means of the method of fulfilling himself with all things. The repose in this condition consists of an absorption into all, precisely by this achievement of fulfillment. The T may be cognized precisely when the light finds repose in the Self.

In the self-referential state of the Supreme which is devoid in the beginning of all activity, the first light that shines forth is that of the T, composed of pure consciousness.

The following passage spells out the two Heart-mantra-s once again, and then gives a different mantra, which is linked with a graphic description of the mantra flaming in the Heart:

The first consciousness of the first moment of consciousness of pleasure ($sukha$), of the sounds of love ($sitkara$), of Being ($sad$), of perfection ($samyak$), and of equalization ($samya$), these are in effect the moments of contact ($sparsa$) with the consciousness of the Ultimate. The penetration into the three abodes of the heart, throat, and lips, into that which manifests itself greatly, is the fourteenth (phoneme) which appears as united (with the preceding phoneme). The one who is intent on the recitation then pronounces the $visarga$, and leads both paths, that of sounding and that of appeasement, into union with the Heart. This seed causes a movement within the central vein of bliss which, beginning with the bulb, passes up through the heart, the throat, the palate, to the summit of the $kundalini$, and thence to the extreme end.
The seed of reabsorption is as follows: the ether (KH) stands in the Heart, the flowery (Ph) is a labial, the fire (R) is a cerebral, the triangular (E) is palato-guttural, and the bindu (M) resides in the higher sphere. The awakened one who employs this method and is wholly devoted to the recitation of the phonemes without long delay penetrates into the abode of the Supreme, he the wise one. According to certain texts, for example, the Diksottara-tantra, the word varna refers to colors, blue and so on. He who remembers in his own Heart the reabsorption (Ks), the man (M), the fire (R), and the wind (Y), united with the Rudra (U), and the bindu (M), sees at the end of seven days the goal of his practice. This is a fire which, awakened by this seed, flames violently in the lotus of his Heart, like a flame made variegated by sparks of different colors - blue, yellow, red - which surround it. The bindu shines flaming like a flame, just like the sun without clouds.

By this self which shines of its own accord, the practitioner whose mind is well-concentrated attains a state of identity with Siva, just like copper that has been pierced by mercury becomes gold.40

This intriguing description adds the mantra KsMRYUM to the two Heart-mantra-s. The passage is based on the two possible meanings of the word varna, which is usually interpreted to mean phoneme. It is clear that the authors of the tantra quoted by Abhinavagupta wished to link the denotation of color to the phonemes in order to emphasize the vividness of the experience of the entrance into the fire that rages in the Heart. The passage is also interesting because of its comparison of the process of attainment of identity with Siva to the alchemical transformation of copper into gold. There are hints throughout Abhinavagupta's texts that he was well acquainted with the ancient traditions of Indian alchemy, as well as with the deeper interpretations of the alchemical symbolism in terms of the attainment of immortal consciousness. One such passage will be examined in the final chapter, which will explore the experience of the attainment of the Heart.
CHAPTER 9

Conclusion: The Heart Attained

We began this investigation into the Heart with the notion of "experiential replication," for the entire emphasis of the non-dual Kashmir Shaiva tradition is on the actual experience of the Heart of Siva. This experience has many components. Perhaps most importantly, it completely restructures the inner experience of self-identity. As doubt and limitation are removed from the finite self, the recognition of identity with the omnipresent Siva occurs. As a corollary of this inner rediscovery of the true status of the Self, a radical transformation of the perception of the external world ensues. No longer do finite objects appear as separate and limited structures; rather, the silent and translucent consciousness out of which all things are composed surfaces and becomes visible as the true reality of perceived objects. The changes experienced by the siddha in recovering his true status as Siva bring him the freedom that is Siva's most important attribute. Freedom brings with it a blissfulness that increasingly overpowers and invades the siddha's life. Abhinavagupta tells us:

The essence of consciousness is freedom, and the essence of that is a mass of bliss. It is for this reason that ritual actions directed toward an attainment of a state of identity and absorption should be carried out employing elements that bring joy to the Heart.¹

In this concluding chapter various aspects of the experience of the Heart will be examined. The notion of "experiential replication" and the
idea of *jivan-mukti*, life-in-freedom, will lead us to several descriptive passages in Abhinavagupta's writings that convey some of the experiential content of the meditative entrance into the Heart. Many of these passages emphasize the notion of *ananda*, bliss, especially the culminating conception, termed *jagadananda*, universal bliss, which becomes the hallmark of the Kaula lineage.

In the first two *PT* verses the Goddess implores Bhairava to reveal to her the great secret of the power that abides in the Heart. In his commentary Abhinavagupta presents the view of the *purvapaksin* who questions the necessity for any kind of revelation. The objection is based upon the ground that if it is agreed that the Self is already shining in the Heart of all beings, then there is no need for Bhairava to reveal it. Abhinavagupta responds to this objection by saying:

> True, but even though it shines there, it has not truly become a conscious apprehension. Without conscious apprehension, even if a thing exists, it is as if it did not exist, just like the leaves and grass and other things when riding in a chariot. The question is thus appropriate because contentment is not possible without a conscious realization. Contentment (*trpti*) is of two kinds. The first is effected by means of absorption (*samavesa*) and consists of magical powers. The second is attained by reaching a condition of conscious heart-felt realization, and it is the state of being liberated while still alive.²

The operative phrase in this passage is "conscious apprehension" or "conscious realization," which translates the Sanskrit *hrdayangamibhuta*. This compound literally means "has become something that moves in the Heart."³ It has also been rendered as "a condition of conscious heart-felt realization." The argument that Abhinavagupta puts forward seems to be that even though we agree that in the innermost recesses all beings are essentially constituted by and identical with Siva, there remains a crucial difference between unconsciously being something and consciously taking possession of one's true status. In one case, the finite self, ignorant of its identity with Siva, suffers bondage and limitation. In the other case, conscious realization of the true status of the perceiver generates a transformative and empowering effect.

The *sadhaka*'s recognition of his identity with Siva is simply the experiential awakening to a preexisting condition. Consequently, from an ontological perspective, when freedom is gained nothing has really changed. What has always been continues to be. Yet, epistemologically, the awakening to a conscious realization of the true situation is powerfully liberating. Everything changes. Indeed, it is as a result of this heart-felt realization that the state of *jivan-mukti* is said to arise.

It is important to emphasize that the "conscious realization" referred to
is not simply a process of assenting intellectually to or affirming belief in a religious doctrine. No doubt, comprehension and faith may constitute an important first step in the process of gaining liberation. Nevertheless, it should be clear that to "become something that moves in the Heart" cannot be reduced to "having an idea in the mind." The power which moves in the Heart is the sakti, the spanda. The process of conscious realization involves the awakening to and grasping of this innate power of the Ultimate. It is this power that increasingly overwhelms the finite self with the infinity of Siva. Finally, the experience of realization matures sufficiently that the sadhaka may rightly utter the startling assertion, "I am Siva" (Sivo'ham).

The Goddess pleads with Bhairava to relate the great secret so that she may obtain (vrajami) the 'I'. The choice of verbal root vraj is significant. It is this same root that occurs in the first verse of the PT in relation to the notion of moving-in-the-void (khecari). Abhinavagupta glosses the notion of 'obtaining' in the following way:

As soon as this means is known, khecari - the power of consciousness - penetrates into the level of awakened consciousness, and obtains, goes, knows, the state of identity (samata), the state of fullness of the Self, the state of non-dual, non-discursive awareness.4

The condition 'obtained' as a result of the revelatory transmission of knowledge by Bhairava is termed contentment (trpti). Contentment is said to be of two kinds. The first occurs as a result of absorption (samavesa) and results in the attainment of magical powers (yibhuti). The second kind of contentment is brought about by the achievement of the condition of conscious heart-felt realization and results in the attainment of life-in-freedom. These two types of contentment are not mutually exclusive. They are rather the result of the two possible attitudes that the sadhaka may assume when entering into his sadhana. The first attitude focuses on the achievement of a specific goal, on the enjoyment of a specific desire. As the sadhaka's meditative absorption deepens he attains the extraordinary power that is necessary to fulfill that goal or desire. The second attitude involves the unswerving determination to attain complete freedom. In this case, the sadhaka bypasses the fulfillment of any specific goal and plunges completely into the Heart to attain freedom.

There does not seem to be any true contradiction between this division of contentment into two types and the statement that it is the practice of meditative absorption in the form of the three upaya-s that is responsible for the attainment of freedom. Ultimately, the statement that extraordinary powers are obtained by absorption does not contradict the idea that heart-felt realization also results from absorption. The difference seems to He
in the intention that the sadhaka adopts at the beginning of his practice and the depth and completeness of the absorption he is able to attain. In any case, Abhinavagupta makes it clear that it is the sakti that is ultimately responsible for both kinds of contentment: the enjoyment of fulfilled desires (bhukti) and attainment of liberation (mukti):

Reveal that power to me, lead me on the path of reflexive awareness, so that when that power is transformed into a firm cognition in my awareness, I may attain contentment of both kinds, enjoyment and liberation, a contentment whose nature is of the consciousness of all beings, that is, the 'I'.

Abhinavagupta clarifies that this final form of contentment is related to the attainment of the Heart:

He is united with this Heart as soon as this power has appeared before him. In fact, the state of liberation of one who is still alive, characterized by an absorption into the pair of the Sri Bhairava, is precisely this attainment of the Heart. Because as soon as it appears, the Ultimate (A), which is formed of consciousness only, grants the highest kaulika perfection, which is precisely a state of liberation while one is still alive.

The attainment of the Heart corresponds to the attainment of the liberating power of Siva which grants freedom and unveils the Ultimate reality. This highest of religious goals is implied by the phrase "conscious realization." Abhinavagupta makes it abundantly clear that his entire purpose for writing texts is the clarification and facilitation of this final religious goal:

The purpose of this text is the attainment of liberation while still living. The nature of this state of liberation is that it results from a profound absorption into the nondifferentiated essential form of Bhairava, which is identical with the perfect egoity, the astonishment of the Self, The living being now consists of the entire group of principles conceived as being in connection with totality. The differences that compose it are luminous with the play that bestows the fragrance of the Self. This liberation occurs because of the heart-felt realization of the innermost Self. Thus, the living being becomes the Lord of all conscious subjects; among all beings he is a fit recipient for the knowledge of the Supreme. This liberation occurs because grace has entered into him; he has received the supreme descent of energy.

This remarkable statement of the purpose (prayojana) of the PTv describes the delightful unity-in-difference that characterizes life-in-freedom. The finite self attains liberation and thus experiences its particular portion of the whole as indissolubly united with the cosmic totality. The finite self expands to experience itself as the perfectly fulfilled egoity (purnahanta),
and in so doing comes to the experience of astonishment (*camatkara*)
inherent in this amazing transformation into the universal Self. The *sadhaka*
truly comes to embody the cosmos. The capacity to experience finite
objects is not lost; instead these objects are seen as "luminous with the play
that bestows the fragrance of the Self." The astonishment of the experience
involves not just the discovery that the Self is the true inner identity, but
also the bewildering perception that this nondifferentiated Self is simulta-
nuously lightly at play as a luminosity inherent in all external objects.

The primary instrument for the attainment of this condition of freedom
is the *mantra*. Abhinavagupta declares this unequivocally:

> For one intent upon being entirely in the highest perfection, the nature of
> which is the state of being liberated while still alive, except for the attainment
> of the seed of the Heart, there is nothing at all that is of any use.\(^8\)

The attainment of freedom is also termed the attainment of the condition
of Bhairava, which as Abhinavagupta emphasizes, is to be attained in
this very body:

> Completely, that is, he who remembers, cognizes the seed by the manner which
> has been described and will be described; he successfully accomplishes his
> goal, and becomes with this very body a vessel for all the extraordinary powers,
> as well as for the Supreme Bhairava.\(^9\)

Abhinavagupta expands on the process of attainment of freedom through
the proper remembrance of the *mantra*:

> Thus continuously remembering the *seed-mantra*, even in the midst of his
daily affairs, then as a result of this practice of remembrance, the ritual of
worship is duly performed. As a result of the great excellence which prevails
in the *sastra*-s, beginning with the other scientific treatises on the Kula and
ending with the Saiva and Vaisnava treatises, the state of liberation while still
alive arises. Here the great entanglement of the sport of existence which is
produced as a result of the astonishment experienced in one's own supreme
consciousness, this great entanglement becomes filled with the great Lord, the
blessed Bhairava. This state of liberation while still alive is a direct experience
(*anubhava*). Remembrance in this case describes a direct perception which
does not revolve around anything other than the perception of the Self. Even
though the worshipper's heart has not been filled in its essential being with the
power, the peculiar efficacy of the worship-method (*pujavidhi*) is such that the
worshipper is able to remember perfectly the seed-mantra. He thus attains
the potency of the *mantra* which is the reality known as the Heart. In this way
he attains the highest degree of perfection. Thus, he obtains liberation while
still alive. He attains the potency of the *mantra* whose nature is the Heart
because of the efficacy of the method of worship, either by himself, because of his own superiority and difference, or because of the lotus flower of the clear and gracious speech of the Lord guru. This is the state of liberation while still alive. That in which everything shines, and which shines everywhere, O awakened ones, is the one, brilliant, quivering gleam, the Supreme Heart. That which is the abode of the origin of his own world, she-ass or mare, expanding and contracting at the same time, he rejoices in his own Heart. He should worship the vibrating Heart which appears as cosmic manifestation; thus the Heart should be worshipped in the heart, in the susumna passage where one will encounter the great bliss of the pair of Siva and sakti. Wherever - while meditating, remembering, cognizing, or acting - he attains repose, there the Heart will shine brightly. Where there is this one supreme knowledge linked, however, to verbalization, the principles, those who enjoy the various worlds, Siva and the gods, the mothers of bound souls, each participating in its own way in its essence - which is at once the supreme reality and yet linked to diversity - they all attain the consciousness which is at once supreme and diverse.\textsuperscript{10}

In this passage Abhinavagupta argues that the various methods of ritual and worship can all be reduced to the proper remembrance of the mantra. This remembrance becomes a continuous process, not in the sense that the practitioner (upasaka) need mumble the mantra throughout all of his daily affairs, although this certainly became a widespread practice. Rather, remembrance here means the attainment of a condition in which the Self is continuously directly experienced (anubhava), even in the midst of one's daily affairs. It is a direct perception of that which is not different from the perceiver. This is the definition of jivan-mukti.

The "great entanglement of the sport of existence" arises as part of the astonishment experienced in the supreme consciousness, an astonishment, in this case, that there should be anything at all different from the infinite Self. This great entanglement is filled up with the Bhairava, with the directly experienced perception of the Self as the all-pervasive reality both internally and externally. Abhinavagupta then links the Heart-mantra, the potency of the mantra, and the Ultimate reality of the Heart. He describes the vibrating Heart as the origin of the world, as shining everywhere, and as especially to be experienced in the central susumna vein. Here the sadhaka will enter into the experience of the great bliss of the primordial couple, Siva and sakti. Wherever and whenever one attains repose in the Heart, the reality of the Heart will shine brightly.

Again and again the emphasis is on direct experience of the reality of the Heart. One of the terms that is often encountered in this regard is the notion of "appropriation" (svikartavya). Abhinavagupta says:

\begin{quote}
This cognition of the Heart must be appropriated, made one's own, as a reality that is empty of differences, whose nature is that it appears all at once, devoid of time."
\end{quote}
The reality of the Heart must be personally experienced. It is not enough to be told about it or to attempt to imagine it. The practitioner must directly transform the field of experience from night into day:

When the absorption into the Heart is maintained for four periods of forty-eight minutes, then the totality, whose nature is essentially light, attains the condition of day, and the contraction of the night of maya is destroyed. Then the practitioner with this very body becomes omniscient like Bhairava.\textsuperscript{12}

The night of maya is the contraction that has given rise to the great entanglement. This night is to be dispelled by the expansive absorption into the reality of the Heart, which is essentially light. The gleaming light of the Heart activated by the practice of the mantra sever the knots of the Heart and true knowledge of the Self is attained. Once released, however, this light can in no way be held back: it is unconcealable and unbounded. It begins to spread out from the inner reality of the Heart and invades the entire structure of finiteness. When this happens it transforms the inertness of finitude into the vibrancy of life:

This is the tetrad, the moon and its three parts, the Heart, which, being present and being reposed in one's own Heart whose form is a consciousness of the self, must be projected within oneself in order to obtain an absorption whose nature is that it appropriates the levels of mind, breath, and body. One should place the entire group (kula), consisting of the mind, breath, body and senses, so that its one essence is resting on that tetrad, with its inert character having been dissolved, whose principal part is the cognition of the form of that tetrad. Because of the expansion of its light, one will arrive at a state where the kula becomes light. In this way the absorption of the tetrad of the Emissive Power in the levels of body, breath, and so on has been shown.\textsuperscript{13}

The kula becomes light. The opaque and limiting structure of body, breath, and senses is invaded by the light of the Heart. It is for this reason that the liberated one becomes a Siva incarnate. Even the body and the activities of the senses are radically transformed.

In a long passage in the PTlv, Abhinavagupta describes in detail the successive experiences encountered by the practitioner engaging in meditative absorption:

[\textit{slokas 11-16:}]

When the mantra has been "pronounced," the entire great multitudes of mantras and mudra-s appear immediately before him, characterized by absorption in his own body. He who remembers during forty-eight minutes, sealed in the navel, in the cumbaka - kissing pose, such a man always binds in his own body the host of mantras and mudra-s. When asked, he can even tell about
past and future things. Pronouncing, that is, remembering, during a period of three hours, the form of the divinity which he desires to reach, without any doubt, he beholds before his very eyes that divinity, attracted by the powers of Rudra. Practicing remembrance for only two periods of three hours, he becomes one who resides in the ether. With three periods of three hours, all the Mothers, the powerful mistresses of yoga, the heroes, the Lords of the heroes, and the mighty troop of the Sakini-s, all these, having arrived, impelled by Bhairava who gives the sign, grant the supreme perfection or whatever boon is desired.

Abhinavagupta begins his comment on these verses by summarizing the process by which freedom is attained. He then states that as the state of freedom matures an outward flowing from the Heart into the levels of body, mind, and breath occurs. In other words, freedom is first established in the deep cave of consciousness by the activation of the reality of the Heart. The process does not end there, however. Using an analogy from alchemy, that of quicksilver penetrating metal, he states that the vessel of consciousness becomes heated. The outward flowing of reality from the Heart then negates the insentiency of the finite structure of individuality. It is this actual physical transformation of the body/mind complex that is the precondition for the manifestation of the extraordinary capacities that are by-products of the practice of absorption:

Then, because of the practice of absorption into our own consciousness, even regardless of the disciplines of yoga taught in other texts, such as the mastery over the breath and subtle channels, the lower kaulika perfections consisting of magical powers are produced for him. When this seed is pronounced, that is, as soon as it is absorbed into the level of the vital breath, immediately the mantras and mudra-s, whose bodies are the powers of knowledge and action respectively, appear before the one who pronounces the seed. How? By penetrating into his body. Indeed, his own body is penetrated by that vital breath which is merged with the form of the Heart, whose characteristic is a completely full knowledge and action. Even the body which is filled by the Heart is penetrated by the mantras and mudra-s whose nature is, respectively, knowledge and action. Therefore, the basic principle of these supernatural powers is that they are governed by the mantras and mudra-s.
Abhinavagupta continues by saying that as part of the spontaneous by-product of the sadhaka's absorption into the practice of the Heart-mantra, the lower kaulika perfections, consisting of certain extraordinary capacities, manifest themselves. He insists that these capacities will occur even without the practice of the specific techniques for mastery of the vital breath and the subtle channels that are prescribed in other texts as the requisite methods for the development of extraordinary capacities. Abhinavagupta argues that the forces governing these supernatural powers are the mantras and the mudras. Mudra may mean certain specific hand-gestures that are thought to channel and focus the vital energy. Abhinavagupta states in the TA that mudras may involve the entire body, the hands, speech, and the mind. He further states that the most important mudra is the khecari-mudra. This statement is significant because it shows us that in a larger sense mudra comes to mean the attainment of specific spiritual states. These states encompass the body, the hands, speech, and mind, and unite the entire personality in a specific gesture for channeling the vital power. In sum, extraordinary capacities manifest automatically as the body becomes penetrated by the mantras and mudras.

Abhinavagupta continues to describe the experience that results as the time period dedicated to absorption is extended:

If one practices such an absorption uninterruptedly during two periods of twenty-four minutes with mouth pursed as if to kiss, in the form of the hollow space formed by a crow's beak, tending to swallow - that is, to kiss - the entire external Being, depending on the mass of objects (and this gesture of the mouth will produce the enjoyment of an extremely cold taste, whose nature is the soma-moon, and whose form is the condition of being [the phoneme S]) and "being sealed in the navel," that is, having as a limit the site of the navel by the practice of the absorption into the "full pot," then the entire assemblage of mantras and mudras are manifested in his body, which is then as if ruled by them. Here the term body means as much the levels of speech and body proper, as well as the individual self, that is, the mind. Because he is thus penetrated by the powers of action and knowledge, whatsoever question is posed to him, and instantly past, present, and future, appear before him, all that according to truth.

In this passage Abhinavagupta gives a series of technical yogic instructions relevant to a specific type of absorption: the "kissing" pose, sealed in the navel, absorption in the "full pot." These yogic details are difficult to interpret specifically. Their overall symbolism is clear enough, however. The practice of meditative absorption proceeds with the intention of devouring the entire external world and reabsorbing it back into the "full pot," the stomachlike matrix, the womblike structure that harbors within it the entire universe.
Once again, the first phoneme of the Heart-mantra comes into play (sad, soma, and by extension, sitala). The entire universe is reduced to its essential Being. This Being is experienced as producing a cold (sitala) taste (rasa) in the mouth. This is the immortal nectar-essence of all existence, the soma. The practitioner whose body has been penetrated by the mantras and mudra-s, linked respectively to the power of knowledge and the power of action, and who has thus swallowed the entire manifest universe and reduced it to a cold tasting of the immortal essence, is then able to answer any question that is posed to him. He has attained a kind of omniscience.

The text continues:

When such a practice, consisting of absorption into the mantras and mudra-s in their universal form, has become strong, if he extends it constantly in the midst of that practice to three hours without interruptions, shining simultaneously, of one taste, whatsoever divinity connected with a mantra or mudra is placed in his Heart, then that divinity is brought near by the powers of Rudra, is drawn to him by the powers of Rudra, formed by the power which develops from his constant absorption; he sees it before his very eyes, in identity with his own body, because its form has been known."

The intense power that develops from the constant practice of absorption allows the practitioner to draw to himself whatever divinity he desires. He experiences this divinity as residing in identity with his own body.

Then even as he continues to appropriate these divinities into himself - if he does not abandon his absorption - then remaining continuously absorbed for two periods of three hours, he no longer perceives his own body, vital breath, and so forth, and beholds unveiled the entire mass of the form of consciousness. Then, if he remains in that state for two periods of three hours, all distinctions are completely destroyed and his own body becomes similar to that of someone else."

The practitioner next loses his sense of separateness, of the boundaries usually established by the physical body, and the distinction between self and other. Once he has surpassed this distinction he is able to perceive whole hosts of divine beings:

Moreover, when he does not abandon the practice of absorption even then, but abides constantly absorbed for three periods of three hours without interruption, then he will behold the Mothers, Brahmí and the others; the Yogesvari-s, Mistresses of Yoga; the Vira-s, heroes perfected by the practice of the cakra and led by Aghora; and the Lords of the Heroes beginning with the nine-souled Deity. Also the Siddhas, whose powers are born of the practice of the cakra, appear. All these are endowed with the great power of Bhairava. Even the
groups of Sakini-s, the divisions of the sakti-s, such as the various groups Khecari-s, and so on, all are powerful by the power of Bhairava. All these bestow the state of freedom in this very body, the supreme perfection with regard to the path that extends from the "earth" to Siva. Therefore, all these various divinities beginning with the Mothers are totally impelled by Bhairava, who gives the sign according to the agreed upon rules, the Lord who holds them in identity with his own nature as manifesting and revealing his own nature, and as dependent upon the wheel of Bhairava. For he whose vital breath and so on, are filled by that, by those divinities, he is the Lord of the wheel, and has become Bhairava Himself, and therefore they follow him, as it says in the verse, they arrive before him.\textsuperscript{20}

This theophany, this vision of the celestial hosts, all of whom are ultimately led and controlled by Bhairava, signals the attainment of freedom. The celestial groups are under the leadership of Bhairava and do not appear to anyone who has not attained the condition of Bhairava. Consequently, their appearance before the practitioner marks him as a Lord of the cakra, a Lord of the wheel of divinities. Once this state has been attained any particular desire that remains in the heart of the practitioner will be granted by this wheel of divinities:

Now therefore, they are able to bestow whatsoever particular desire is held in our heart, whether it be from amongst the highest, middle, or lowest group of desires, such as a sword, an unguent, the highest of the underground regions, and so on.\textsuperscript{21}

By placing the desire or intention on the level of these divinities who control the entire functioning of the universe, the practitioner sees that desire fulfilled. This level of powerful causality immediately manifests any thought into form.

Another remarkable description of the attainment of freedom occurs in the MVv:

When the yogin begins to expand the face or sphere of consciousness, all the channels of the senses flow into the inner circle (cakra). Then the channels of the senses forcibly expand with an expansion whose nature is the absence of the variety or differences of the objects of sense. The multiplicity of objects, such as blue, yellow, the relationship of subject and object, and so forth, begin at once to disappear because they are in a state of expectancy facing towards consciousness. At that very moment, by means of the mudra which bestows direct experience and which he obtained from the tradition that stems from the very mouth of the yogini, he seals the All. The yogin directly relaxes into the direct experience of Bhairava in the form of consciousness, the ruler of All. That yogin, filled with wonder attains knowledge of his own Self. The
water-tank is empty even if it is joined with a quantity of water swelling up with various objects. The water which is found in the tank cannot pour forth from there elsewhere. It is incompetent to fill the tank even with continued exertion. But when, because of the liquid that results from the shower of rain which falls into the essence of the door of the inner portion, the tank is filled quite full, then the streams of water flow fully in all directions. Thus, because of the violent force of its own light, consciousness begins to manifest itself. If even for an instant the sense objects would all together turn to repose in consciousness, which illuminates all things as being nondifferent from itself, then maya disappears and the plane of Bhairava shines forth brilliantly.22

Here Abhinavagupta describes the process by which the yogin expands the inner condition of consciousness by drawing in all of the sensory functions and concentratig them in the inner circle of awareness. Upon reaching this inner circle the sensory capacities expand due to the absence of external sense-objects. Abhinavagupta next describes the process of direct experience resulting from the mudra which is received from the mouth of the yogini. The notion of the yoginivaktra is an ambiguous reference either to the Goddess of consciousness or to the sexual ritual of the Kaula, in which case the mouth of the yogini is the vagina. Punning on the meaning of mudra as seal, Abhinavagupta states that the yogin then seals the totality: he marks it with the direct apprehension (saksad anubhava) of Bhairava as the world-ruler. Of even more importance is Abhinavagupta's use of the term tandrita, meaning relaxed, or released. The yogin lets go; he releases his tight grasp of the finite which has been maintained through the narrow channels of the sensory activity, but which is now released as a result of being free of objects and filled instead with Bhairava.

Abhinavagupta now embarks on an analogy using the imagery of water. He compares the process of diverting the senses away from their external objects toward Bhairava with the situation that occurs when a water tank has many streams flowing into it from all directions. These streams are the finite perceptions, which are incapable of filling the receptacle of consciousness no matter how hard they try. In addition, the water that lies in the tank, the finite consciousness before the process of introversion has taken place, is incapable of flowing outward from the tank; that is, the inner finite awareness cannot escape its bondage in the limiting structure of individuality. A shower of rain then occurs. The streams of sensory activity are channelled inward away from the objects of sense. The water tank overflows in all directions: the finite consciousness overflows with the stream of infinity that feeds into its innermost recesses. The analogy concludes with the statement that if even for a moment the objects of sense could be collected together to repose in consciousness, then these objects of sense would be reduced to a condition of non-difference with consciousness.
At this point the entire plane of *maya* would simply disappear from view and Bhairava would brilliantly shine forth.

In a remarkable passage that begins with a consideration of the usefulness of ritual for those seeking freedom and ends with an ecstatic hymn of praise to the God and Goddess, Abhinavagupta extols the bliss which is the essence (*rasa*) that forms the proper offering in the ritual:

In the case of the one who desires liberation, the ritual actions - whether they are numerous or few, depending upon the various elements employed in them such as substances, qualities, connections with time and place, brought about by external or imaginary means, but always causing joy in the Heart - these distinctions make no difference at all with respect to the final aim which is the attainment of the highest realization. For the different conditions of smallness or largeness are not admitted in *brahman*. The essence of consciousness is freedom and of that the essence is a mass of bliss. For this reason the ritual action that is directed towards the attainment of absorption and concentration in consciousness should always be accomplished by means of elements that give joy to the Heart. The wise one in order to worship properly should offer back into the highest abode that essence (*rasa*) which flows and trickles from the multitude of existing things because they are heavy with their nondifference with Siva. This idea has been taught by me many times in my devotional verses in the appropriate sections. Reposing on the light which emanates from the absolute reality, those who know the secret mystery worship you with the vision of the supreme nectar which shines forth radiantly. In the divine abode of the body, I adore you, O God together with the Goddess, day and night. I adore you continuously washing with the sprinklings of the essence of my astonishment the support of all that has been made. I adore you with the spiritual flowers of the innate being; I adore you with the priceless goblet of the Heart which is full of the ambrosia of bliss. This triple world, full of various tastes and flavors, is cast into the apparatus of the nexus of the Heart. I squeeze it, casting it down from on high with the great weight of the spiritual discrimination. The supreme nectar of consciousness, which removes birth, old age and death, flows gushing from it. Opening the mouth wide I devour it, the supreme oblation, like clarified butter, and in this way, O Supreme Goddess, I gladden and satisfy you day and night.²³

Ritual has an important place in the non-dual Kashmir Shaiva tradition. The *TA* describes and refers to numerous types of ritual. However, from the point of view of those desirous of liberation, as opposed to the perspective of those desiring the fruition of specific desires, the precision of the regulations established for the performance of ritual lose their importance. The only important element in this case is that every aspect of ritual be such that it causes joy in the Heart. If this is done, then the ritual will be useful as an accessory in preparing the mind and spirit for the practice of
absorption and the attainment of concentration. The method of worship (pujavidhi) prepares those who have not yet received the total saktipata to use the mantra successfully. Abhinavagupta describes the essential aspect of worship as a rendering back to Siva of the essence (rasa) that flows from all things. Extracting this blissful concentrate from reality, one offers it back to the highest abode as the only truly worthwhile gift that can be rendered to Siva.

Abhinavagupta expresses this same idea in a series of powerfully evocative verses. These are among the most fervent expressions to be found in the TA. In them we find a description of the continuous process of worship that constitutes the constant experience of life-in-freedom. The dominant image is that of the rasa, the essence of all things, which is composed of bliss and astonishment and which bestows immortality through the nectar of supreme consciousness.

In a related image Abhinavagupta describes the process of rendering reality down to this essential form as a violent process of digestion:

This condition which transcends the limitations is, according to the understanding of the teachers, of two sorts - either because of the nonmanifestation of the limitations or as a result of their having disappeared into cessation. This disappearance is itself of two kinds: the first is a peaceful, tranquil cessation and the second occurs as a result of a violent digestion. This violent digestion is characterized by a taste for devouring all and by a fire that is continuously flaming. The disappearance obtained by this violent digestion, which is indeed the third kind, consumes by fire the kindling wood of differentiation and is thus a subject worthy of being taught. All existing things hurled forcibly into the fire that rages in the stomach of one's own consciousness abandon all differentiation and feed the fire with the fuel of its own power. When the finite form of all things is dissolved by this violent digestion, then the All, which feeds and sustains the divinities of consciousness, becomes the ambrosia of immortality. These divinities, once satisfied, hold the Bhairava, who is totally full, the sky of consciousness, the God who reposes in the Heart and not elsewhere, this Bhairava they hold in identity with themselves.

The notion of a violent digestion (hathapaka) once again emphasizes the physicality of the process of enlightenment. Just as there is a "fire" in the stomach that digests food and renders it useful and nourishing to the body, so also there is a flame at the center of the belly of all things, in the middle of the Heart, that violently consumes all differentiated objects. The result of this oblation is not destructive, but rather extractive. The cosmic digestive flame raging in the stomach of consciousness extracts the infinite essence from all finite things. The various divinities feed on this essence and thus fulfill Bhairava and reach identity with him.
In the following passage Abhinavagupta describes the condition of the realized being in more detail:

For him who has ascended to such a natural Heart, whatsoever he does, whether it be breathing or thinking, all of that is considered to be religious mantra repetition (japa). Meditation (dhyana), in the highest sense of the word, will be whatsoever he constructs, either internally or externally, by means of his own will, and by employing the essential nature of the Emission (srsti) The abode of consciousness is at the same time formless and yet composed of all forms. Those who wish to attain a specific fruit do so by a constant meditation on a specific image and not just any image. Just as he who wishes to bring water near to himself even among the many things that occur nondifferently, removes all other images from before himself. He then ardently desires the pot for the purpose of obtaining the liquid. Because of the appearance in full vigor of the power of causality of the highest Lord, the specific image brings forth the specifically imagined fruit. He whose Heart is completely fulfilled and who does not desire any specific fruit, because of the absence of all limitations, before him the Goddess in her universal form appears. The yogin who stands in the Embodied Cosmos, quivering and vibrating because of an abundance of the highest juice of Bhairava, whatsoever bodily position he may adopt is considered a mudra. Perpetually burning without any of the implements for lighting a flame, the top-knot flames violently within us, the violent flame that has issued forth from the stream of all the sensory capacities. The various objects of the senses entering such a fire of knowledge and causing the flame to increase, become a cause for the rite of oblation. The attainment composed in this way is indeed a dwelling in the very essence of the Supreme. This attainment leads to the Supreme, to the highest limit of fullness, and there is no further fruit beyond that which is higher. All the varied fruits imagined and desired by us are based on a state of nonfullness. Indeed, once genuine fullness has been attained, what other fruit would we desire? This is the method of sacrifice. If it becomes firmly rooted in one's heart, and the wheel of consciousness settles down, grows clear and bright, tranquil and placid, then very shortly one would be in one's last birth. He who develops firmly in this sacrifice attains unity (kaivalya), even though he is still beheld by the worldly ones because he remains bound by the activity of the body.26

The non-dual Kashmir Shaiva tradition does not neglect the human impulse toward the fulfillment of specific desires. In this passage, Abhinavagupta describes the method to be employed to draw out from the formless realm the specific form that is desired. At the same time, he enjoins his listeners to realize that desires arise in the mind because one has not yet arrived at a state of fulfillment. Once the practitioner has achieved the Supreme, which is the highest level of fullness, there is no room left for any more desire. To such a one the Goddess appears in her universal form. The fulfilled being leads a life of spontaneous religiosity and whatever action he may perform
is considered to be japa, whatever posture he assumes is considered to be a mudra. The yogin abides at the level of pure causality: he stands within the kula, vibrating and quivering with the supreme "juice" (parasava) of Bhairava. There have been other textual references to the notion of flames in the stomach and in the Heart, but here we read about the flame in the top-knot that burns using the various sense objects as fuel. This process is termed the method of sacrifice (yagavidhi) and its practice tranquilizes the wheel of consciousness and leads to liberation.

In the final passage to be considered, Abhinavagupta first describes a process of meditation in which the familiar themes of the reduction of all to its essence and the discovery within the finite sense-objects of the infinite consciousness are once again employed. He then describes six stages of bliss yielded by a meditative practice for the realization of the Supreme. He attributes both of these practices to his teacher in the Kaula lineage, Sambhunatha.

This supreme wheel goes out from the Heart through the spaces of the eyes, and so forth, and ranges over the various objects of the senses. Because of the wheel's rays of light, a form whose nature is of the light of the moon, sun, and fire is established in those objects by regular degrees in conjunction with manifestation, maintenance, and dissolution. In this way, as this wheel falls on the various objects of the senses (such as sound) by way of the sense-capacity openings, one should recognize that sensory object as identical with the wheel. Thus, wherever the universal wheel falls, by this methodical practice it falls in its entirety like the universal monarch. In this way, the whole multitude of paths is effortlessly dissolved in the great wheel of Bhairava which is contained in consciousness. Then - even when all this has come to an end and all that is left are latent impressions - one should meditate on the great wheel which revolves and is the overflowing of the true Self. Because of the dissolution of all that could be burned, and because of the destruction of even the remaining latent impressions, the practitioner should meditate on that wheel as becoming calm, then as pacified, then as tranquil quietude itself. By this method of meditation, the entire universe is dissolved in the wheel, in that consciousness. Consciousness then shines alone, free of objects. Then, because of the essential nature of consciousness, manifestation occurs once again. That consciousness is the great Goddess. Continually causing the universe to become absorbed in his own consciousness, and continually emitting it again, the practitioner would become the perpetual Bhairava. The yogin should meditate on the wheel with three rays or spokes, then on one with four, with five, with fifty, sixty-four, one hundred, or one thousand. He should meditate with an undistracted mind on the wheel with innumerable thousands of rays. There is no limitation at all to the universal power of the great Lord, the great God, the Lord of consciousness, whose consciousness is always trembling and shining brilliantly. For his powers are the entire world and the great Lord is the possessor
of those powers. This is what Sri Kantha has stated in the Mangala Sastra. This is the first method, the method of meditation taught to me by Sambhunatha when I had pleased him, and it was taught to him by Sumati. These hints will be useful in practicing the other meditations as well, which without succession may be placed among the highest methods that lead to the Supreme. Now, as has been seen, the activities of the vital breath are the rising breath and so on. We will now describe how the Supreme may be unfolded when one employs the vital breath. At first abiding in the Heart, due to a repose in the mere emptiness, in the portion of the knower alone, in the innate bliss, he experiences a state known as "devoid of bliss." Then, when the vital breath rises, he experiences in the "knowable object" the bliss that arises from another. In this condition of the bliss that arises from another, he abides at ease in the apana, which is filled with the infinite portions of the knowable, and he is embellished with the moon of the apana. Having attained the level of the samana, he abides wholly absorbed in the unification of the infinite rays of the knowable objects. He becomes one who is composed of the bliss of brahman. He is totally dedicated to devouring the limiting forces of the streams of the knowable objects and the means of knowing; he reposes in the fire of the udana and comes to know the great bliss. Then, having entered this repose, and when the great flames begin to abate, the great pervasion which is beyond all qualifications ensues, and this is called the vyana, the unlimited. Then, indeed, the bliss of consciousness occurs which is not strengthened by what is inert. For here indeed there is no possibility whatsoever of a difference which would be formed of the insentient. That is a state where there is no distinction, where everything appears shining on all sides, where consciousness is unstruck, and fed by the supreme nectar. There one does not meet with any "realizations" in the proper sense of the word at all. This condition taught to me by Sambhunatha is known as the universal bliss. The repose in this state may be obtained by employing the pronunciation of the Heart. The complete repose in this state corresponds to the attainment of the condition of the Supreme. These are the six states which arise from the ascension of the vital breath into our different internal abodes, even if in essence our essential nature, flowing out of the Heart, is always one.

Abhinavagupta begins by describing the process by which the wheel of supreme consciousness emerges from the body through the openings established for the sense-capacities. As the meditative practice advances, the sadhaka begins to recognize that the objects of sense that he encounters are identical with the wheel of supreme consciousness. Like the universal monarch who travels with his entire entourage wherever he goes, supreme consciousness cannot be subdivided. As it emerges through the senses in its totality it cognizes its own totality as present within the objects of the senses. In this way the dissolution of all apparently separate and finite objects in the great wheel of Bhairava occurs. The practitioner persists in his practice, however, and dissolves even the residues, the latent impressions of experience. The wheel of consciousness is thus purified, calmed, and brought to
a complete state of quietude. At this point, he will experience contentless consciousness devoid of any objects whatsoever. As we have seen before, the non-dual Kashmir Shaiva tradition does not want to stop at this stage. It considers that level of completely contentless consciousness as being the great Goddess. From her, manifestation inevitably occurs once again. In this way the sadhaka rehearses within himself the powers of Bhairava that encompass the repeated and cyclical process of manifestation, maintenance, and dissolution of the universe.

In the second meditation Abhinavagupta focuses on the activity of the vital breath as a means for obtaining the Supreme and he describes the levels of bliss attained as the awareness comes to repose on the different level of the vital breath. These can be summarized as follows: beginning with the innate bliss (nijananda), he experiences a state devoid of bliss (nirananda) that results from a repose in the emptiness in the Heart that arises when the knower is alone. Five other levels of bliss then ensue: parananda, the bliss that arises from another, occurs when he experiences the infinite aspect of the knowable objects. It is linked to an abiding in the vital breath known as apana. Brahmananda, the bliss of brahman, results from the experience of the unification of the infinite rays of objects. It is linked with the vital breath samana. Mahananda, the great bliss, arises as the practitioner devours the limited aspect of all knowable objects. It is linked with the udana vital breath. Cidananda, the bliss of consciousness, arises in the great pervasion (mahavyapti) that results as all limiting qualities are transcended. It is linked to vyana. Finally, the universal bliss, jagadananda, which is beyond any type of realization, occurs. Here the universality of supreme consciousness is experienced. This state of being is fed by the supreme nectar (paramrta). This condition, described by Abhinavagupta as the highest abode, the Heart, is to be attained by one of five methods: by stirring up the power of consciousness (sakta ksobha); by penetrating into the Embodied Cosmos (kulavesa); by going within at any of the end-points of the subtle channels (sarvanadyagragocara); by pervasion (vyapti); and by the contraction of everything into oneself (sarvatmasamkoca). These five methods summarize the various meditation techniques we have been considering in this chapter. Says Abhinavagupta:

He who abides one-pointedly attending to the vibration that dwells in the two channels of bliss, attains that nectar-like level from which the Emission flows. The wise one may enter the Heart in the agitation of the power, in the entrance into the kula, in the region of the beginning of all the energy channels, in the pervasion and in the contraction of all into himself. As a result of the mutual rubbing of the collection of finite energies of the sun and moon, the bliss of Emission shines forth in the central abode whose nature is the fire and the moon. But enough telling of secret things! The Heart of the yogini is hidden
by its very nature. The wise one who reposes there would be one who has attained his purpose.  

**Concluding Remarks**

Even at the end of this long journey through Abhinavagupta's thought, it is clear that we have barely touched the surface of this rich tradition. The purpose of this study will have been served, however, if any reader of the translation of the \( P\tilde{V}v \) presented in the appendix finds in these pages an orientation and a guide to the religious vision presented in that text. The \( PTlv \), like all of Abhinavagupta's works, compresses within it an entire worldview that must be made accessible for the text to be understood. We will judge this study to be successful if the concepts and explanations presented in these pages open up that worldview to the reader. The focus of the study has been the symbol of the Heart. In a sense, like all religious symbols, it still eludes precise definition. The Heart speaks for the depth and density of the Ultimate reality that the tradition desired to attain and teach. While the deeper resonances of the Heart await direct experience, it has been possible to present here the major concepts that are necessary for an understanding of the texts that deal with the Heart: the notion of the Supreme, the idea of the Embodied Cosmos, the force of the Emissional Power, the compression of this liberating power in the *mantra*, and the necessity for the direct apprehension of the Supreme. We have seen that the tradition teaches that there is an innate presence of the Supreme within the individual. This presence is the Heart, which is also the self-propelling, self-activating force that leads one to experience the freedom and bliss of the Ultimate, man's true nature.

In the non-dual Kashmir Shaiva tradition there is found a complete expression of these truths, which are admittedly shared with many other religious traditions of India. The non-dual Kashmir Shaiva tradition represents, however, an important moment in the religious history of India. Synthesizing within itself all of the major streams that preceded it, it presents a particularly rich and dense formulation of the ancient wisdoms of India. Abhinavagupta stands as the architect of this synthesis. The central religious vision that unifies all of these streams of religious practice finds its most concrete expression in the Kaula lineage and the symbol of the Heart. The \( PTlv \), which provides a textual focus for the study, functions as an initial window by which we may peer into this vision. Long quotations from other works by Abhinavagupta are included in order to complement the teachings he presents in the \( PTlv \). The translation and study of other texts of the tradition will undoubtedly enrich our picture of this religious vision.
An examination of Abhinavagupta's tantric teachings is a crucial step toward establishing a proper understanding of Abhinavagupta's thought and, indeed, of the entire non-dual Kashmir Shaiva tradition. There is a sense in which the dimensions of religious experience and mystical praxis, so refined in Abhinavagupta's tantric formulations, are logically prior to the philosophical and speculative structures of, for example, the Isvara-pratyabhijna-vimarsini and the Dhvanyaloka-locana. Yet it must not be assumed that the Tantra is more "primitive" or less sophisticated than the philosophical or aesthetic materials. Rather it should be seen as the "inner teaching" that is directed toward the enlightenment of disciples. Through this "inner teaching," Abhinavagupta reveals with great subtlety and fluidity the methods of enlightenment transmitted to him by his guru, Sambhunatha. The Kaula lineage, despite its use of sexual symbolism, addresses itself to the theme of consciousness. While the tradition is known for its secret ritual, it would be a serious mistake to interpret these elegant teachings about the inner workings of consciousness as simply sexual techniques. The seeker of liberation is directed by Abhinavagupta to the realm of his own powerful consciousness. The philosophical teachings logically follow as interpretation and explanation, and are more congealed, less fluid "outer teachings" that establish the position of the non-dual Kashmir Shaivas vis-a-vis all other darsana-s. It is extremely important to grapple with the tantric writings of Abhinavagupta, even if the ultimate goal is an understanding of his "philosophy," for it is in the tantric writings that he has revealed his central religious vision, the essential stance or approach to reality that pervades and informs the entire body of his writings.
APPENDIX

The Short Gloss on the Supreme
The Queen of the Three
Paratrisikalaghuvrttih

written by the Eminent Teacher, the Great Lord Sri Abhinavagupta
[Introductory verses]

1. Where all splendors are in the light
   And all darknesses in the dark
   brilliant light and gloomy darkness!
   I praise that transcendent light.

2. In the unbroken succession of agema-s, true sacred scriptures,
   The Trika doctrine has been expounded in many ways.
   But the essence of the Tantra is here set forth in accord with the views of the great Utpaladeva.

3. Always new, hidden,
   Yet old and apparent to all,
   The Heart, the Ultimate
   Shines alone with the brilliance of the Supreme.
[Introductory prose to sloka I:]

At this point the Goddess, who is our very Self in the process of awakening, reflects and questions her Self incessantly. Thus the text says: "The blessed Goddess said."

What does she inquire about? That is stated in the following verses.

[sloka .]

O Lord, how can the Ultimate of its own accord grant the kaulika perfection?

1.) by what means, as soon as known, does the khecari, Moving-in-the-Void, attain a condition of equality?
2.) by means of which, as soon as it is known, he would obtain the condition of equalization with the khecari.

[commentary on sloka .]

O God, you are my own Self, always present from the beginning in knowledge and action, you alone are the Ultimate, the Superior, the Excellent, the Surpassing; and the Supreme is the conscious perceiver with respect to the insentient, the inert. However, that perceiver whose nature is consciousness and which is self-illuminating is not in turn perceived by another subject; thus it is termed Ultimate.

For this reason, the Ultimate, formed of consciousness, is always present everywhere, and is devoid of spatial or temporal dimensions, of prior and subsequent; it is undeniable and unconcealed. What then can be said of it?

This much indeed may be said of it:

How, in what way, does He, of his own accord, freely, "give," that is to say, produce, the manifestation, intelligible to both organs of sense and action, of the kaulika, produce the "perfection" of the kaulika, which is the sum total of the "group" (kula), consisting of the ever-new bodies, senses, worlds?

The verbal stem da (which can be understood as derivable from either the verbal root da, in the sense of giving, or from the verbal root das in the sense of destroying) can mean "he emits" and "he reabsorbs."

Since the Ultimate (anuttara) is uniformly and only consciousness (cit), how can it appear as the differentiated forms of knowable object, process of knowing and knowing subject, which are always new and as such able to be discussed and examined? This is the meaning of the question.
[Objection:] But what is the use of that once it is known?
[Response:] As soon as this means is known, the khecari - the power of Consciousness - penetrates into the level of awakened consciousness, and obtains, goes, knows, the state of identity (samata), the state of fullness of the self, the state of non-dual, nondiscursive awareness.
When that means is not known, such a consciousness is not khecari because it moves only in the portion called "knowable object" whose nature is unawakened. That consciousness is then restricted by knowable objects such as blue, and so on, and is thus not the full power of consciousness.

[Another interpretation of the sloka is now presented.]
Moreover, the spiritual perfections (siddhi-s) are obtained by the practice of the yoga of the vital breath, and so forth, by a series of practices such as concentration. How can the Ultimate, which is devoid of temporal succession and is only consciousness, grant the kaulika perfection, linked to temporal succession, by the mere knowing of which, one would obtain the nature of the Goddess?

{sloka 2a:}

Powerful Lord! My very Self! Tell me that mysterious secret, great, unconcealed.

[commentary on sloka 2a:]

This is preeminently secret, great, excellent, unconcealed because self-luminous. Therefore, O Lord, you who are accustomed to create by revealing and concealing your own nature, O Self, describe to me, to the consciousness that inquires, explain to me, that is, lead the course of your thoughts into a series of intelligible words.

[Objection:] But the subjective perceiver already appears shining in the Heart of all, therefore what is the point of the question?
[Response:] True, but even though it shines there, it has not truly become a conscious apprehension. Without conscious apprehension, even if a thing exists, it is as if it did not exist, just like the leaves and grass and other things when riding in a chariot. The question is thus appropriate because contentment is not possible without a conscious realization. Contentment (trpti) is of two kinds. The first is effected by means of absorption (samavesa) and consists of magical powers. The second is attained by reaching a condition of conscious heart-felt realization, and it is the state of being liberated while still alive. He will demonstrate precisely that in the next verses.
[slokas 2b-3a:]

Reveal to me that power, which abides in the Heart, known as the ka\textit{ulini}, the noble Lady of the "group."

O Lord of Gods, reveal to me that by means of which I may obtain satisfaction, the T.

[commentary on 2b-3a:]

The power which resides in the Heart of consciousness is freedom itself. The purpose of its creative activity is the "group" (\textit{kula}), the entire range of perceiving subject, perceived object, and process of perception. Thus it is called \textit{kaulini} - having to do with the group. She is the noble Lady of that constructed group, she rules over it. By knowing it, she causes its manifestation, as well as reabsorbing it in herself.

Reveal that power to me, lead me on the path of reflexive awareness, so that when that power is transformed into a firm cognition in my awareness, I may attain contentment of both kinds, enjoyment and liberation, a contentment whose nature is of the consciousness of all beings, that is, the T. The two occurrences of \textit{kathaya} are understood as being in the causative.

Thus, when consciousness is about to be awakened, she poses a question about the highest reality, which, though hidden, is becoming manifest. Then, when she has become full, has woken up, she turns into the divine Bhairava and she herself answers her own question.

Here there is never a question of temporal precedence between the two. The past tense is used because the past appears as a fictional distinction of time which creates the illusion of gradations in the ever remote past.

Because the nature of That is that it is a divine reality which cannot be directly perceived, the perfect tense is employed to speak about it.

[sloka 3b-4:]

The Lord Bhairava said:

Hear, O Goddess, O One of great fortune, about the higher than the highest and also about the highest.

I will describe to you the Ultimate so that no doubt remains, the Ultimate which grants the \textit{kaulika} perfection,

That \textit{kaulika} function, O Goddess, abides in the great space of my Heart.
You who when enlightened are greatly fortunate, and whose desire is to show yourself - hear - clearly understand. Because I will describe to you, who are thus enlightened, the nature of the Ultimate which is also the nature of the perceiver, and even of the Highest. (The word api includes in that the object of knowledge and the process of knowing, and so on.)

The Ultimate grants that kaulika perfection, that is to say, it manifests, and so on, everything, and has as its aim the contentment which consists of both enjoyment and emancipation. I will describe that Ultimate to you, which is to say, I will lead you to realize it directly in your Heart. In this way, as soon as you have succeeded in understanding, you will be free from doubt about this forever. (The pronoun ayam is employed to indicate that the kaulika function is apparent to all.) Indeed, that kaulika function resides in the ether of my Heart, where its nature is consciousness, and it is always known as being in the Heart.

As it says in the scripture (Chandogya Upanisad 6.2):
"O Friend, in the beginning this alone was... "One without a second," "Then he thought: 'May I be many!'" and so on.
And then:

All the vowels from A to bindu are the lunar stations, joined with time. The moon and the sun are said to be within these.

O virtuous One, within the five classes of phonemes from K to M stand in order the twenty-five principles from "earth" to the "Self."

Above that group of twenty-five is the tetrad of supports - namely the wind, fire, water and Indra.
Higher than that are the phonemes beginning with S, generally known as the pentad of brahman.

The process of manifestation whose root is A and whose end is KSA has thus been declared. Its course is to be known. O beautiful One, this
is proclaimed in all the \textit{tantra-s} as the womb of all the \textit{mantras}, and of all the \textit{vidya-s}, the granter of All.

[commentary on 5-9a:]

It is well known that perception here is just the illumination of the objective world, which, by nature, is divided \textit{up into two groups}, namely the knowing subjects and knowable objects. In this respect, the knowing subject has as its essence the supremely subtle vibration of the Self. The nature of the knowing subject is that it is characterized by knowledge and action, and its nature is one of contraction and expansion, that is, opening and closing. It is not like a pot, and so on, which is inert, limited and stationary. The more this combination of expansion and contraction becomes evident in the vibration of the Heart, of the triangle, the more does the subjectivity become elevated, until it reaches the consciousness of Bhairava. Conversely, the more the expansion and contraction diminish, the more does the subjectivity fall until it becomes inert like a stone. This expansion and contraction is the characteristic of the Emission (\textit{visarga}), whose essence is freedom, that is, the very power of the Lord, of the Ultimate (\textit{anuttara}). Therefore, the phoneme H, the \textit{visarga}, is termed the \textit{Rudra-yamala}, the Rudra-Dyad, because it consists of both the Supreme Siva and \textit{sakti}, of the rest and activity which constitute the Union of Bhairava with his beloved.

In the center of this conjunction of expansion and contraction are to be found the Ultimate (\textit{anuttara: A}), bliss (\textit{ananda: A}), will (\textit{iccha: I}), domination (\textit{isana: I}), opening (\textit{unmesa: U}), and decrease (\textit{unata: U}). When in will (\textit{I}) and domination (\textit{I}), there is an appearance of objects at first very vague, and then more clearly, then the four phonemes \textit{R}, \textit{R}, \textit{L}, \textit{L} appear. From the union of will (\textit{I}) and domination (\textit{I}) with the Ultimate (\textit{A}) and bliss (\textit{A}), result the phonemes \textit{E} and \textit{A I}. Similarly, from the union of opening (\textit{U}) and decrease (\textit{U}) with the Ultimate (\textit{A}) and bliss (\textit{A}) result the phonemes \textit{O} and \textit{A V}. Thereupon, when that which appears as the knowable object is reduced to a residue of latent impressions, there appears the \textit{bindu}, M, whose characteristic is that of being a knowing subject. By this means, the process of manifestation is completed and perfected. In this way, we have the Supreme Bhairava couple which consists of the energy of Emission which is formed of the completely full consciousness and bliss. In this respect, the Emissional state (\textit{visarga: H}) is the universal form genetically implicit in each of the fifteen different moments and thus it does not require separate consideration.

Thus, the \textit{kaulika} function which is truly contained in my Heart, where it is identical with consciousness, now, that is, without interruption,
constantly, begins to spread by the power of the cognition of objectivity.

The vowels which begin with A and end with the bindu are called tithi, lunar stations, because they fill up the "stations" (sthiti) of the moon of awakened consciousness. In this way, the Emissional Power of the moon of enlightened consciousness, which is composed of bliss and light, that is, the Emissional Power of the Ultimate (anuttara), is filled by these fifteen stations.

These fifteen are called vowels (svara), because their nature is a sounding whose character results from the self-referral of consciousness, and because they shine by themselves (svayam rajantah). Thus with respect to the external world they are self-luminous.

Within them are the moon and sun, contraction and expansion. Within them as their nature is the visarga, which is made up of two dots (bindu).

The presence of the visarga in all the vowels is due to the fact that all the vowels are united with time (kala) - here to be understood in the sense of the self-referential consciousness whose nature is to hold things together (samkalana). The self-referential consciousness is dynamically vibratory. It is not immobile, stationary, and inert.

Even in the external world, the sun and moon, which rule the day and night by their expansion and contraction, move within these fifteen stations.

She, the blessed One, is that highest power of Emission. This is the power of Emission in its highest form.

There now occurs the appearance of knowable objects, which takes place in will (I) and domination (I). As knowable objects begin to appear, begin to separate themselves, there occur, on the gross level, the five gross elements and, on the subtle level, the five subtle elements. This results in ten principles, namely: earth, water, fire, air, space, smell, taste, form, touch, and sound. This is the manifestation of the knowable objects.

At the same time, the sense capacities are being manifested as instruments of cognition. That is to say, the five action-capacities, namely: sexual, excretory, ambulatory, grasping, and speaking, in which the power of action predominates; and the five sense-capacities - smelling, tasting, seeing, touching, hearing - in which the power of cognition predominates.

Then, when by gradual degrees, the aspect of the "knowable objects" begins to diminish, the perceiving aspect begins to manifest itself, namely: mind, egoity, intellect, primordial materiality, and individual consciousness. Thus the principles beginning with "earth" and ending with "individual consciousness" correspond to the series of phonemes that runs from K to M. The individual consciousness, even though it is a limited perceiver, is here reckoned as belonging to the group of knowable objects. For without
it, who would perceive the objects of knowledge beginning with "earth"? Such is the nature of that which appears as the knowable objects.

The mass of knowable objects, without abandoning their state of being knowable objects, operate to unify the two different aspects: knowable object and limited knower. The principles engaged in this unification are: kala, formed of air, is that which impels and consists of a limited capacity for action; the impure knowledge, formed of fire, which illuminates and consists of a limited capacity for knowing; maya, formed of water, is that which satiates; the power of attachment, expressed in the verse by the word Indra, formed of earth, and consisting of intense affection, is by nature a stopping, an immersion.

These are the four powers that maintain the individual soul resting in the middle like Trisanku, which otherwise would fall into the condition of complete inertia like a rock, or would ascend into the sky of consciousness like the supreme Lord. In either case, in the absence of the finite knowing subject, there would be no knowable objects, nor would there be contraction and expansion, because without contraction, expansion is not logically possible. This is absurd, because the entire universe, that is, the manifestation of the knowable object or the manifestation of the corresponding knower, is projected by the Emissional force which is precisely expansion and contraction.

The power of space plays no role in sustaining the finite subject. For the power of space is inherent in the individual soul as the true subjectivity, at once empty of objects and providing a place in which objects may be known. This is the Emissional Power in its lowest form.

When the aspect of objectivity begins by degrees to be concealed, and the form of consciousness begins to unfold, then to that degree there occurs a firmness, an increasing fullness of the form of consciousness; a union with its own light, a vibration which is characterized by the attainment of supreme freedom. Everything is then thoroughly pervaded by the form of consciousness.

The expression "the pentad of brahman" refers to the five phonemes $ to KS, which pervade, fulfill, cause to expand the Self. They relate the five principles to Vidya, Isvara, Sadasiva, Sakti and Siva. They are formed of the "subtle" earth, water, fire, air and space, and correspond to the five faces of Siva: Sadyojata, Vamadeva, Aghora, Tatpurusa and Isana. This is the Emissional Power in its intermediate form.

Finally, these pentads are resolved into the Ultimate, A. In this way, the Emissional Power expands with a form that extends from the lunar stations beginning with A, to the pentad of brahman. This is the wheel of powers of the Lord (sakticakra), of Bhairava, a wheel which is an uninterrupted continuous series. The five powers of consciousness, bliss,
will, knowledge, and action, which are made of the five "elemental" powers, are, in effect, the powers of consciousness placed in the triangle, namely the Ultimate, the will and the unfolding (A I U), which then unfold into a fivefold division.

Therefore, all this is at first formed of an undivided self-referential consciousness. Then, because of an act of self-divided consciousness, whose nature is an awareness of distinctions, it assumes the form of fifty cognitions which attain the state of being objects, and thus the group of external objects arises. The life of these principles results precisely because they are essentially moments of conscious cognition. This is the form of the mātrka.

For this reason, that is the source of all mantras. It is the cause which consists of an undivided self-referential consciousness; whether it be of mantras whose meaning is hidden, bija-mantras, that is, seed-syllables, or pinda-mantras comprising groups of syllables such as the catuskala or navatma, and which are determined by a male divinity which they express; or whether it be the vidya-s, such as the garland-mantra-s, such as for example, the mantra namah-sivaya, whose meaning is clearly known to all, and which are determined by a female divinity which they express.

Everything whatsoever which is said in the secret books sacred to Siva-Rudra, and so on, arises from this reality. That form indeed, which bestows the lowest and the highest powers, all that is obtained in the thirty-six principles. Self-referential consciousness constitutes the "life" of those thirty-six principles. The "cognizable objects" which are the inert aspects form, so to speak, its body. That consciousness is found in the blessed Goddess, and therefore she is able to bestow everything. Because of this, in the text, the blessed Goddess assumes the role of the interrogator. She is celebrated as "beautiful", in the verse, when she arrives at a profound heart-felt realization of this consciousness. In the text she is called "glorious" in order to celebrate her becoming possessed of omnipresence.

This is the threefold manifestation, which has the phoneme A as its root, and ends in the phoneme KSA. That manifestation is in the abode of the Ultimate A, has its beginning in the Ultimate A, and finally therein comes to repose in the very Siva. Therefore, by that knowledge, the true nature of the Ultimate, of the vibration, comes to be well known. Which is to say, that the Ultimate is only that, i.e., the entire srsti is really only the Ultimate A. Thus, the power which abides in the Heart is, above all, formed of an undivided self-referential consciousness. Then, that power, by its own innate freedom formed of the Ultimate A, turns itself into distinct cognitions whose form is the kaulika-siddhi. This has been decisively ascertained in all the tantras such as the Siva, Rudra, Rahasya, and so on.
[Objection:] But our doubts concerning the nature of the Heart, which is at once an undivided self-referential consciousness, and which is the root for the several different cognitive awarenesses, have not been removed.

[Response:] The tantra teaches the following in order to remove these doubts.

[sloka 9:]

O beautiful One, the Heart of the Self of Bhairava is the third brahman. It is united, O fair hipped One, with the fourteenth phoneme, and it is followed by the last of the master of the lunar stations. (S-A U-H)

[commentary on 9:]

The third brahman (S), whose nature is the Sadasiva principle, and whose essence is the Light of Aghora, is characterized by the entire group of knowable objects, in a condition in which their "objectivity" has not yet become clear, which is to say, the totality in the form of Being (sad). This third brahman is continually fused, connected with the fourteenth vowel (AU), as well as reposing, that is, being inseparably connected with, that which is the end, in the sense of ultimate basis, of the Lords of the stations, of the fifteen vowels, reposing, that is, on the visarga (H). This is the Heart of the essence of the Self of Bhairava, that is to say, of the blessed "group of sounds" which has the totality as its body. The fourteenth vowel (AU) abounds in the perfectly full Ultimate (A) and bliss (A), and which is possessed of expansion (U) and diminution (U) - which are the body of the completely full power of action. The other two powers, the power of knowledge and the power of will, are compressed within that fourteenth vowel by means of the power of action.

For just as in the body, which is made up of all the principles and depends on various different parts, such as the skin, that Heart is called the place where there is a repose in the pure light and pure consciousness, which is not different from the parts of the body. In the same way, the body of the blessed Lord Bhairava, which is composed of various principles, worlds, and so on, which has a universal form, has a self-referential consciousness as its essence and is composed of the fifty phonemes. The Heart is the very essence of that, and is a self-referential consciousness which is non-different from all the parts of the body.

O Lady with beautiful hips! The Heart is the subtle vibration of the triangle which consists of the incessant expansion and contraction of the three powers, and it is the place of repose, the place of supreme bliss.
This very Heart is the Self of Bhairava, of that which is the essence of Bhairava, and of the Blessed Supreme Goddess who is inseparable and non-different from Him.

Consciousness, which is formed of the Ultimate (A), vibrates with a "seed" vibration in the two extreme points of the first vowel (A), two points whose nature is that of reposing in their own-nature. Because of the power of that vibration, consciousness, which is composed of the essence of all, becomes in the central point, the impulse toward the manifestation of the distinct and different "cognitions." For that reason it is said, "Having encompassed the manifestation ..." (sloka 30).

[sloka 10;]

He who is not born of the yogini, who is not Rudra, does not clearly obtain this Heart of the God of Gods, which immediately grants both liberation and union.

[commentary on 10:]

He who obtains this seed-mantra, in the very moment he obtains it, is no longer a bound creature. Because, when this seed-mantra is obtained, for him this Heart is produced. This Heart is the very condition of Bhairava. For that reason, as long as he is not born from the union of the pair - from the union of Rudra and the yogini - that is to say, as long as he has not opened his vision to the very Self, or in other words, until a "descent of energy" (saktipata) has not fallen on him, how then could this Heart appear to him?

He is united with this Heart as soon as this has appeared before him. In fact, the state of liberation of one who is still alive, characterized by an absorption into the pair of the Sri Bhairava, is precisely this attainment of the Heart. Because, as soon as it appears, the Ultimate (A), which is formed of consciousness only, grants the highest kaulika perfection, which is precisely a state of liberation while one is still alive. This has been demonstrated.

The Lord will now begin to show by what means even the nonsupreme perfections, characterized by various extraordinary powers, come about because of the power of the self-referential nature of consciousness, and are independent of the power of the mass of practices such as vital breath, subtle channels, appropriate times of day, mantra, vidya, rules of conduct and so on.
[sloka 11:]

When the mantra has been "pronounced," the entire great multitudes of mantras and mudra-s appear immediately before him, characterized by absorption in his own body.

[sloka 12:]

He who "remembers" during forty-eight minutes, sealed in the navel, in the cumbaka - "kissing pose" - such a man always binds in his own body the host of mantras and mudra-s.

[sloka 13:]

When asked, he can even tell about past and future things. "Pronouncing," that is "remembering," during a period of three hours, the form of the divinity which he desires to reach . . .

[sloka 14:]

Without any doubt, he beholds before his very eyes that divinity attracted by the powers of Rudra.

Practicing remembrance for only two periods of three hours, he becomes one who resides in the ether.

[sloka 15:]

With three periods of three hours, all the Mothers, the powerful mistresses of Yoga, the heroes, the Lords of the heroes, and the mighty troop of the Sakini-s:

[sloka 16:]

All these, having arrived, impelled by Bhairava who gives the sign, grant the supreme perfection or whatever boon is desired.

[commentary on 11-16:]

It has been said that if the principle of consciousness obtains the state of being the Heart, then the condition of being free while still alive ensues. Whenever a flowing form is produced by the condition of practice
due to the heating up of the vessel of awareness whose nature is the Heart, that flowing, by a regular absorption into the levels of body, mind, and breath, just like quicksilver penetrating into metal, negates the insentienty of breath and mind. Then, because of the practice of absorption into our own consciousness, even regardless of the disciplines of yoga taught in other texts, such as the mastery over the breath and subtle channels, the lower kaulika perfections consisting of magical powers are produced for him. This is the meaning.

When this seed is pronounced, that is, as soon as it is absorbed into the level of the vital breath, immediately the mantras and mudra-s, whose bodies are the powers of knowledge and action respectively, appear before the one who pronounces the seed.

How? By penetrating into his body. Indeed, his own body is penetrated by that vital breath which is merged with the form of the Heart, whose characteristic is a completely full knowledge and action. Even the body which is filled by the Heart is penetrated by the mantras and mudras whose nature is, respectively knowledge and action. Therefore, the basic principle of these supernatural powers is that they are governed by the mantras and mudras.

If one practices such an absorption uninterruptedly during two periods of twenty-four minutes with mouth pursed as if to kiss, in the form of the hollow space formed by a crow's beak, tending to swallow - that is, to kiss the entire external "being," depending on the mass of objects (and this gesture of the mouth will produce the enjoyment of an extremely cold taste, whose nature is the soma-moon, and whose form is the condition of "being" [the phoneme $S$]) - and "being sealed in the navel," that is, having as limit the site of the navel by the practice of the absorption into the "full pot," then the entire assemblage of mantras and mudra-s are manifested in his body, which is then as if ruled by them. Here the term body means as much the levels of speech and body proper, as well as the individual self, that is, the mind.

Because he is thus penetrated by the powers of action and knowledge, whatsoever question is posed to him, and instantly past, present, and future appear before him, all that according to truth.

When such a practice, consisting of absorption into the mantras and mudra-s in their universal form, has become strong, if he extends it constantly in the midst of that practice to three hours without interruptions, shining simultaneously, of one taste, whatsoever divinity connected with a mantra or mudra is placed in his Heart, then that divinity is brought near by the powers of Rudra, is drawn to him by the powers of Rudra, formed by the power which develops from his constant absorption. He sees it before his very eyes, in identity with his own body, because its form has been known.
Then even as he continues to appropriate these divinities into himself - if he does not abandon his absorption - then remaining continuously absorbed for two periods of three hours, he no longer perceives his own body, vital breath, and so on, and beholds unveiled the entire mass of the form of consciousness. Then, if he remains in that state for two periods of three hours, all distinctions are completely destroyed and his own body becomes similar to that of someone else.

Moreover, when he does not abandon the practice of absorption even then, but abides constantly absorbed for three periods of three hours without interruption, then he will behold the Mothers, Brahmī and the others; the Yogesvari-s, Mistresses of Yoga; the Vira-s, heroes perfected by the practice of the cakra and led by Aghora; and the Lords of the Heroes beginning with the nine-souled Deity. The Siddhas, whose powers are born of the practice of the cakra, also appear. All these are endowed with the great power of Bhairava. Even the groups of Sakini’s, the divisions of the Sakti-s, such as the various groups Khecari-s, and so on, all are powerful by the power of Bhairava. All these bestow the state of freedom in this very body, the supreme perfection with regard to the path that extends from the “earth” to Siva. Therefore, all these various divinities beginning with the Mothers are totally impelled by Bhairava, who gives the sign, according to the agreed upon rules, the Lord who holds them in identity with his own nature as manifesting and revealing his own nature, and as dependent upon the wheel of Bhairava.

For he whose vital breath, and so forth, are filled by that, by those divinities, is the Lord of the wheel, and has become Bhairava himself, and therefore they follow him, as it says in the verse, they arrive before him.

Therefore, they are able to bestow whatsoever particular desire is held in our heart, whether it be from amongst the highest, middle, or lowest group of desires, such as a sword, an unguent, the highest of the underground regions.

Whereas in the other forms of yoga beginning with the mastery over the subtle channels and vital breath, because of a dependence with regard to things external to the yoga, such as the totality of different disciplines, there exists a limitation with regard to given time periods and so forth.

As it is said:
"The kula-seed is within the belly of the fish. Its fruition, that is, the Kaula, is available during the kṛta-yuga - the Golden Age - and so on."

Herein there is no distinction whatsoever. Thus the Lord teaches;

[sloka 17.]

By means of the Heart certain possessors of the mantra have become
perfected, some will become perfected, and some are presently leading others to perfection.

[commentary on 17:]

Thus, the power of absorption into the energy of the mantra is the same in all three time periods. But - someone might object - what do they lead to perfection by means of that mantra?

[sloka 18a:]

Whatsoever is in the Bhairava Tantra, all that is lead to perfection by that.

[Note on 18b: Gnoli expunges verse 18b on the grounds that it bears a resemblance to a passage he inserted in the above commentary. 18b would read:

"Because of the power of absorption in the force of the mantra-no limits remain."
]

[commentary on 18a:]

Whatsoever is declared to be perfected in other treatises, all that is perfected by this mantra. Moreover, what is the use, in this respect, of taking notice of all the possible things than can be perfected. Someone might doubt: by what method is this mantra to be possessed? The Lord replies: "In this doctrine there is no limitation whatsoever."

Here what is to be perfected is only the attainment of that mantra, but neither vows nor formulas are of any useful assistance whatsoever. The only thing of any use here is the complete destruction of the disease of doubt, because doubt, the essence of which is uncertainty and error, is the principal obstacle to an absorption whose nature is the cognition of that which has one taste. He will make this clear in the next verse.

[sloka 19:]

Whoever knows truly, even though he may not have seen the mandala, is forever united with the extraordinary powers, he is a yogin, and he has been initiated.

[sloka 20a-21a:]

Due to the mere knowledge of this, he is known by all the powers.
Indeed, even without this *yoga*, he becomes the equal to the family of Sakini-s.

With respect to the sacrifice, he becomes a knower of the rite, even if he does not know the rules for the rite.

*commentary on 9a-21a:*

There exist many other rituals, but all the rituals for the entrusting and transmission of the *mantra* - from the installation of the deity to the ritual for the sacrificial priest - all collectively denoted in the verse as the "vision of the mandala" - here all this is of no use whatsoever. He who knows in this way, without a doubt, truly, what has been said and what will be said, attains both kinds of perfection: enjoyment and liberation. He is truly joined with a *yoga* characterized by absorption. He has truly attained an initiation which is characterized by the destruction of the bonds of difference and the granting of the state of *Siva*. From the mere knowledge of this, and he is known, that is, becomes renown, as one possessed of a completely full own-nature, which is characterized by all the powers. Because, even without this *yoga* characterized by the practice of absorption, he becomes an equal, a companion to the wheel of deities, to the family of Sakini's, because of the fulfilling of all things by the mere knowing of this.

The various ritual regulations which concern the sacrifice, this is what must be accomplished. Even if he is ignorant of these, he becomes one who knows what must be done because of the acquisition of the complete fruit of that *mantra*. He who does not know as rules the well established rituals of the other schools: Ordinary, Vedic, Saiva, Left-Handed, Right-Handed, Kaula, and so forth, he indeed here in the sacrifice becomes a knower of the ritual method because he knows the "method" of the Ultimate. With respect to the Ultimate, which is only consciousness, all other things are extraneous.

Someone may ask - how is that "seed," which is [described in verse 9, beginning] "United with the fourteenth" - how is that seed composed of the "cognition" of the supreme deity, that is, our own Self, with the fullness of all its powers which is nonseparate from the entire universe? To reply to this query, he will state:

*sloka 21b:*

Beginning with the *kalagni*, the fire at the end of time, and ending with *maya*, all resides in the body of *brahman*. 
[sloka 22:]

[Prima facie:] Siva is known to extend from the level of viiva to the level of ananta. Beyond that is the triad of powers. Whatevsoever is within that is contained in the purified path.

[Abhinavagupta:] Siva, the beginning of the totality, the supreme triad of powers resides within the endless. The knowledge that is within, that is contained in the purified path.

[sloka 23a:]

The atomic self speedily attains the pure and powerful knowledge [or the knowledge "relating to the Lord."

[sloka 23b-24a:]

Siva, the impeller of that mantra, is to be known as the omniscient One, the Supreme Lord, the omnipresent One, stainless, pellucid, satisfied, residing in himself, [Abhinavagupta: "making an effort within himself], pure.

[sloka 24b-25a:]

Just as the large tree is to be found potentially in the banyan tree seed, so this world, both inanimate and animate, abides in the "seed" of the Heart.

[commentary on 21-24:]

Just as when one abandons the manifest expansion of an earthenware jug, all that truly remains is clay. When the manifest form of clay is left behind, all that truly remains is an odor. When the specific form of the odor is not cognized, what truly remains is the 'I'. When such a distinction has been shattered, what remains is an essence formed of happiness, suffering and error. When these three have been excised, there remain only the forms of the knower and the knowable. In the end, when even the distinction formed by subject and object has disappeared, all that remains is Being (sad). Even there, when the cognition of the three phonemes (of the word sad) has ceased, there ensues a repose in the first letter S alone. Then, this last repose in the phoneme S, is also the last repose of All - from the "water" principle to the maya principle - of the entire range of knowable objects which appears in the midst of the impure path. At the moment of this last repose there appears the brahman, the All, one
homogeneous mass, immortal, which has become the atman. This is the last repose of brahmavadin-s - the followers of Vedanta.

According to us, there occurs beyond that, Bhairava, who manifests the entire universe by means of his activity of "churning" that state of repose. As it says in the Bhagavad-gita (14.3):

My womb is the great brahman and in it I place the seed. From this derives the origin of all beings, O Bharata!

When, because of the disappearance of the distinction of its own-nature, the condition of repose in mere Being is no longer cognized, then Being appears to enter into a condition where it is absorbed into the powers of appearing light and self-referential consciousness. Because, in reality, that state of mere Being is not different from the true nature of such powers - what remains is the true nature of the power. That power is either will, action or knowledge, because nothing at all can appear without reposing on the power of such self-referential consciousness which is "I will," "I act," and "I know."

In the thought "I will" are intermixed the three powers - and in the same way in "I know," and "I act," because they are inseparably connected. Therefore, that which is becoming manifest appears as reposed in the own-nature which is composed of the triad of powers.

The true nature of this triad of powers is one, namely freedom, and because of this freedom, a true body made of two dots, formed of two knots, one above and one below, a body made of consciousness, whose nature is the supreme deity, Bhairava. The nature of these three phonemes is that they are composed of three states of repose in, respectively, the knowable object (S), the process of knowing (AU) and the knowing subject (H). Depending upon which state of repose one selects, the "pronunciation" extends as far as that phoneme alone. There thus occurs a threefold pronunciation. There are thus three types of perfection: enjoyment, enjoyment and liberation, and liberation.

When, in reference to an external object such as a pot, the place of repose is a single "cognition," then the All, devoid of succession, in the form of Being is emitted, thrown into the supreme Bhairava, by the power of the will, and that Being residing in the supreme Bhairava, nondifferent from it, by the same power of the will, and so on, is emitted outward into the external world where it assumes the form of the "knowable" objects. This is the abiding in the Emission (H).

The repose in the "fourteenth" (AU), which is the repose in the (three) powers, and that because of contact with both, that is, now with knowable objects whose nature is the Being, and now with the knowing subject whose
nature is the supreme Bhairava. With the descent of the knower and the process of knowing, Bhairava and the power, \((H \text{ and } A U)\), there occurs the repose in \textit{brahman} (S), that is, a state of undifferentiated identity with the "knowable object." The reality which unifies, that makes of one taste (\textit{ekarasa}) this triangle characterized of three Emissions, one appeased, one aroused, and one that is both, and is thus made of three reposes - that reality is the supreme Emissional principle, and it is the consciousness, the Lord Bhairava himself.

Let us now look at the grammatical construction and literal interpretation of the verses. All that is included between \textit{kalagni}, the first world of the earth principle, and the principle of \textit{maya}, all that reposes in the third \textit{brahman}. The passage that begins with the word \textit{All} and so on, means that Siva, who is the beginning of the totality, the wheel of divinities of Bhairava, the supreme wheel of powers of Bhairava, formed of the three powers, resides within the Unbounded, which is to say the Emission. It is called Unbounded because with respect to it there is no limit - nothing higher. That which impels it is the "fourteenth," whose nature is the vital breath, because without the vital breath it cannot give impulse to the manifestation, and that "fourteenth" pervades the entire pure-impure path from the principle of Siva down to the principle of knowledge. Because of that, in the verse he is known as the great Lord.

He is the knower and actor with respect to everything whether it be differentiated or differentiated-nondifferentiated, because his true nature is that of being a knowing subject, that is, only consciousness, because he is far beyond the expansion and contraction of a material body. He is the supreme Lord, he is omnipresent, from the moment that beginning with the class of the Vidyesvaras one is freed from falling into the narrow defile of \textit{maya}; spotless because free of all adventitious bonds; pellucid because of the nonexistence of imperfections of the innate atomic stains; satisfied because of a lack of desire for any separate knowable object due to the gradual concealing of "this," that is, the group of knowable objects, by the 'I'; residing in himself, that is, making an effort in himself, whose nature is an awakening of bliss; and finally, pure, because of the disappearance of impurities of differentiation.

Such is the nature of the impelling element; whatsoever atomic self rests in the firm practice of absorption, of repose into this impelling element, such a one speedily obtains knowledge, and implied in that, the power of action, appropriate to the Lord, which is present in that impelling element, contained in the elements that go from the pure knowledge up to the principle of Siva relating to the pure-impure path, (relatively) pure knowledge and action, that is, high-low. This is a brief designation of the various fruits that may be obtained by the practice of these three reposes. In the
fourth and highest repose, everything exists in perfect undifferentiated identity, with one taste. Just as in the seed of the banyan tree the great tree exists in identity with the power of the own form which constitutes its nature, so in the seed of the Heart appear all things moving and non-moving, that is, pure and impure, knowing subject or known object, all things shine there as identical with the power within the Heart.

He now clarifies, by means of a summary, the fruit of absorption into the supreme Bhairava which he had previously hinted at in the words "Immediately granting union and liberation" [sloka 10].

[sloka 25:]

He who thus truly knows has received an initiation that leads to nirvana, undoubted, even if he is deprived of oblation (Shuti) of melted butter, of sesame seed.

[commentary on 25:]

He who know in this way, that is, in the manner which we have described, the Heart, truly, that is, with certainty, beyond doubt, his is the initiation, truly, in reality, by means of which he attains the fruit of nirvana. That initiation is undoubted, is a fact of one's own conviction and occurs when one attains the essential form of the Heart. The initiated one knows this supreme knowledge characterized by the Heart and which is given by the divinities of Bhairava who are within the Heart and who bring an escape from the vibration of manifestation which leads to an obscuring of the Self, and are rather directed towards the supreme vibration which consists of the opening of the Self. These same divinities destroy the chief bond which is the state of contraction. Therefore, initiation is characterized by a giving and destroying and its essence is a condition of clear insight [or "would lead to the light of the self (svaprakasa)]. The sesame seed, and so on, are there of no use whatsoever. So far the sense is that for the one intent upon being entirely in the highest perfection whose nature is the state of being liberated while still alive, except for the attainment of the seed of the Heart, there is nothing at all that is of any use.

The rites of adoration (puja) which might be useful for the practice of absorption ought to be described, for as he will say later on "He who has correctly accomplished the ritual of adoration . . . " [sloka 33].

In this respect, we can say that the practice of absorption can have as object either the body, the vital breath, or can take place on the level of the mind. He will now show the rituals of "imposition" (nyasa) which should be carried out in order to acquire the Heart.
Having made the "imposition" on the head, on the face, on the Heart, and on the genitals, and then on the image, and having bound up his top-knot repeating the mantra over it twenty-seven times,

He should then bind securely the ten regions one by one, starting off by noisily making three claps in order to remove all obstacles.

Then he should sprinkle with water, over which the mantra has been muttered the same number of times as the top-knot, the flowers and so on, and then the entire linga and the sacrificial surface.

Before anything else, he should slap himself noisily three times corresponding to the three parts of the Heart mantra and to the corresponding three reposes. That is to say, he appropriates it and makes it his own in order to eliminate obstacles, which consist of a false notion which imagines that differences exist in the four spheres. Also externally, by the noise made when striking the face, the hands and the foot, the obstacle of differences in the infernal regions, the earth, and the heavens will be extinguished.

Having done this and when the place of the Heart, having already entered into a condition of identity with the abodes of the head, takes part in the method of the "staff," he then performs on the body the "imposition" by pronouncing the Heart-seed five times. This imposition participates in five vibrations whose characteristics are consciousness, bliss, will, knowledge, and action, which in turn are characterized by birth, motion, continuous stream, absorption, and cessation.

At this point he will bind up the top-knot - which is made up of the breath and mind and which participates in the state in which the pentad of brahman and thus the five powers which are in the body, such as the head, are not separated one from the other - by pronouncing the Heart-mantra twenty-seven times. The process of binding has as its nature a restraining made up of a repose in the form of the Heart. This figure of twenty-seven is computed as follows: each of the five powers is itself fivefold and to this are added two distinct points marking the beginning and end of the process.
In order to identify the ten regions with the Heart, in both of its forms, as "seed" and as place, he should bind them by means of the Heart-mantra, which is to be pronounced in each case only once. Of those ten regions, all that will be left as a remainder will be a cognition of the Ultimate in the form of the Heart.

Having done this, the instruments of adoration such as the flowers, and so on, also have to be made identical to the Heart by sprinkling them with the liquid which is pervaded with supreme bliss and which is contained in the sacrificial vessel. This liquid itself has been made identical to the Heart by the pronunciation of the Heart-mantra over it twenty-seven times.

Immediately after that, he should do the same for the support of the ritual of adoration, such as the sacrificial ground, the linga, and so on. The meaning of the sloka is that having dissolved the differences inherent in the body, in the breath, by means of identity, as well as removing the differences inherent in the abode of the sacrifice that is to be performed, and having set aside differences in the instruments of adoration, he should also remove any differences that remain in the support of the ritual of adoration itself.

Having done this, he goes on to describe the nature of the ritual of adoration accompanied by the mental construction of the image that is to be adored upon the support of the ritual which can be any one of hundreds of many forms - external or internal - adopted according to the worshippers' pleasure and possibilities, such as a linga, a sacred space, or a mandala.

[sloka 29:]

He should mentally construct a seat with flowers that have been muttered over with the four states.

[sloka 30:]

Therein the Hero should sacrifice to the manifestation, and again to the seat. Having "covered over" (samputikrtya) the manifestation, he immediately afterwards begins the sacrifice (yajana).

[sloka 31:]

He should worship the Goddess, the greatly fortunate one, who is completely full of all principles, who is adorned with all limbs, blessed with the mantra repeated twenty-seven times.
Then he should cause her to be honored (samarcayet) with sweet smelling flowers, and according to his powers, he should adore with supreme devotion, and offer up the very Self.

[commentary on 29-32:]

By the expression the "four states", we understand the body of the "seed" up to the phoneme $AV$, which pervades the tetrad of states from the waking state up to the "fourth." The seat is to be contemplated as including that pervasion of the four states. The manifestation which consists of the phonemes beginning with $A$ and ending with $KSA$, which has been appropriated by the power of the Emission, should be conceived as reposing on such a phoneme $AV$, as resting above it.

The sacrifice (yoga) is in fact the Emission, which is a resting in that repose whose nature is the "beyond the fourth," the mass of the nondifference of all things. He should then sacrifice projecting in that condition of the beyond the fourth, the portion of the Emission, which embraces the entire manifestation, projecting, that is, the form which ends with $AU$, which embraces in itself the tetrad of states beginning with the waking state. Because of this, the Emission, which is situated in the center, is in immediate contact with the states of the vowel ($AU$) and the Being ($S$), which are placed at both of its extremes. The Emission comes to appropriate the blessed supreme Goddess, whose nature is the Ultimate (anuttara), and who abides in nondifferentiation with the Supreme Bhairava, the great Lord. This power transcends all and at the same time is composed of all principles. It is joined with all the masses of existing things which thus form its limbs. The pervasion of the seat has been demonstrated as reached by a repose at all times in the body of the first part which is only Being, in the root portion of the Heart, whose form is the state of Being ($S$), and which consists of the knowable objects, and made up of three different states of waking, dreaming and deep sleep, which are respectively very clear, less clear and unclear; and reposing in that, he should then repose in the state of the vowel ($AU$) which is higher, and gradually one arrives in the end at the principles of Siva and sakti extending as far as the state of the "fourth." And because of this pervasion, one makes one's own all the different principles in series.

One then arrives at the sixteenth part, whose nature is the Emission, and which consists in Bhairava. The seventeenth part, that is, the Ultimate (anuttara), the supreme object of sacrifice, is of the form of the complete nondifference of all things which occurs when one conceives of it as much
transcending all and at the same time all exists in it in a nondifferentiated fashion. Because of that, the repose in it is completely full, and thus the mantra is repeated twenty-seven times. This is the true sacrifice.

In order that this sacrifice be successful, one must properly honor [the Goddess] with fragrant flowers which effortlessly allow for an entrance into the Heart. By flowers here are meant all substances - external and internal - which nourish the Heart because they bestow their own nature within the Heart. By the expression "according to his powers," he means both that power which is the expansion of his essential nature - because one who has not appropriated the essential nature of that power is not suited to perform the sacrifice since he is still "contracted" - or else he refers to the blissful external power which is useful for developing the inner power. This power is found in external materials suitable for the sacrifice such as ablutions, unguents, incense, betel leaf, spirituous liquors.

But one may ask: how should he sacrifice properly? With the highest devotion, with reverence and with great faith, all of which grant him absorption. This great devotion consists in effecting the subordination of the finite levels of the body, the vital breath and the subtle body. This subordination consists in accomplishing a state of humble devotion, whose nature is an immersion into the essence of that which results in the removal of those finite levels and the establishment of the superiority of the supreme consciousness, whose nature is the divinity which has been described and which is to be sacrificed to.

The expression para bhakti may be understood differently. Here bhakti is the most pleasant portion (bhaga) of the flowers and the other instruments of the sacrifice, that is, it is the perfume which is so charming that it can cause an entrance by force into our own Heart. He should therefore know his own Self as filled by that devotion, in both senses, know firmly, sure in the knowledge that it is in a state whose form is non-different from all that exists.

Thus, the one who performs the sacrifice should, while he pronounces the mantra twenty-seven times, know the Self as made up of the supreme blessed Goddess whose essential form is nondifferent from all and which is completely filled with all the multitudes of beings, inner and outer, such as the various kinds of flowers, and so on. In this way, he should repeatedly consider and think about the Self, again and again. This is, in sum, the nature of the adoration (puja), that it consists of a filling up of our own Self.

The consideration of the oblation is now taken up. The knowable principle of reality is a stream that comes forth from the Lord Bhairava, the highest enjoyer. The nature of that principle is that it is the AH, like the food that has been eaten and held in the belly. The libation functions as that which inflames, stimulates that enjoying subject and gives it the
power to destroy, to burn, and to dissolve the very essence of the eaten food and all the remaining residues that are within that. In fact, residual impressions are always tending to rise up just like seeds, like the state of deep sleep. Because of that oblation, in the manner of a digestion, a state of mind results which appeases the doubt, the great ailment of the flowing out of differences whose root are the always arising latent and residual impressions. It is with this purpose that he has summarized the ritual of sacrifice and places an emphasis on the process of oblation.

[sloka 33a:]

In this way the sacrifice has been expounded. This prescribed rule is to be applied in the fire ceremony.

[commentary on 33a:]

Here also the sprinkling of the sesame grains and the other ingredients of the sacrifice, including the large and the small spoons, with the water that has been blessed by reciting the mantra over it the same number of times as over the top-knot, occurs. There then occurs the act of throwing the supreme divinity, that is, the object of the sacrifice, into the fire, executing the instructions that are contained in the verses beginning with [29]: "Mentally constructing a seat by means of flowers that have been muttered over fourteen times" and ending with the verse [30]: "Having 'covered over' the manifestation."

Then the oblation of sesame grains and melted butter is completely fulfilled. This is a complete offering of the oblation according to the method described in the words "He should offer up the very Self." [32] This is the method of the fire-ritual. Thus, adoration (puja) is a combination of two elements sacrifice (yaga) and oblation (homa). The nature of adoration is, in fact, perfect fullness. In this way the blessed supreme Goddess, who is identical to our very Self, is well adored.

Since, until the inner impurity is destroyed, the condition of the identity of All with consciousness is not completely fulfilled. Therefore, in order to develop in us the inner idea that this is the true adoration, and to absorb in himself all external substances, he says the following:

[sloka 33b:]

He who has correctly carried out the procedure of adoration, and who remembers the "seed," he successfully accomplishes his goal.
The "seed" which has no beginning and no end, which moves in the midst of the "stations," expanding, this he should meditate in the lotus of the Heart, and always practice the rays of the moon.

[commentary on 33-34:]

Completely, that is, he who has carried-out the procedure of adoration by the method that has been described; completely, that is, he who remembers, cognizes the "seed," by the manner which has been described and will be described; he successfully accomplishes his goal, becomes with this very body a vessel for all the extraordinary powers, as well as for the supreme Bhairava.

This cognition of the Heart is designated as an object of memory because even though it appears as always new, each of its previous appearances is still completely present (because it is totally devoid of temporal differences) and because all that appears in it is an entirely interior reality. Therefore it is similar to things that are remembered. This is also indicated by the use of the participial suffix (of the word remembering) which shows that the present is not split off from the past. This cognition must be appropriated, made one's own, as a reality that is empty of differences, whose nature is that it appears all at once, devoid of time.

Thus he says "perfectly remembering," even though that state of completeness has been previously discussed in the verse (21) which states: "Beginning with the fire of time," nevertheless he now examines in a clear and extensive way, in the verses "Devoid of beginning and end," that which he has already traced out.

The "seed" whose function is to carry the meaning, is the Heart, and its meaning is the "rays of the moon" (somamsu). The teaching is that he should practice according to the method of nondifference between the signifier and the signified, [where the "rays" of the moon] are interpreted as the great quantity of light which is joined together (samghatta), and the moon (soma = Sa + Uma) is the pair of the blessed Lord Bhairava and his power (sakti).

According to another reading, we may read "the moon and its parts" (somamsa), the supreme object of light and bliss, whose nature is the moon of completely full knowledge. This is the Great Heart, the triangle, the Ultimate, filled by its three parts each of which is higher than the last, that is, the phonemes S, AU and If, which great Heart has as its basis the never obstructed capacity for carrying out hundreds of "openings and closings" of the All (unmesa-nimesa), as shown by the power of contraction.
and expansion (samkoca-vikasa), whose essence are the functions of appearing, that is, blazing forth, and disappearing, that is, dissolving down. This Heart thus has three parts or portions. The compound somamsa is thus interpreted as a collective compound (samahara-dvandva), that is to say, the "moon" and its "parts."

This is the tetrad, the moon and its three parts, the Heart, which being present and being reposed in one's own Heart, whose form is a consciousness of the self, must be projected within himself in order to obtain an absorption whose nature is that it appropriates the levels of mind, breath, and body. He should place the entire group (kula), consisting of the mind, breath, body and senses, so that its one essence is resting on that tetrad, with its inert character having been dissolved, whose principal part is the cognition of the form of that tetrad. Because of the expansion of its light, he will arrive at a state where the kula becomes light. In this way the absorption of the tetrad of the Emissional Power in the levels of body, breath, and so on, has been shown.

Therein, the principal thing which he expounds is the essential nature of the Heart in all its fullness. The Heart is the seed of All devoid of beginning and end, of coming into being and of destruction. Because it is a seed, it expands into the form of All, it moves incessantly to expansion. This Heart which moves in the midst of the Lunar stations made up of time - of the All - is present in everything in the form of an undifferentiated self-referential consciousness. He should continually meditate on this seed of the Heart as having penetrated into his own Heart, into his consciousness, which is in the form of the lotus-flower because it plays at expanding and contracting. He should meditate on this seed which having entered into his consciousness causes it to expand by bringing about the removal by force of the contraction. In this way there occurs the attainment of the state of Bhairava in all its fullness.

With respect to the pronunciation and to the recitation of the Heart-mantra: beginning and end are to be interpreted as meaning the vowels and consonants. The Heart-mantra, devoid of vowels and consonants is only the visarga (H). From that visarga the other fifteen lunar stations (i.e., vowels) expand out, and thus the visarga stands in the midst of all the "stations." As has been said before, this is to be meditated in the lotus of the Heart.

With respect to this "seed" itself, the beginning and end are the consonant (S) and the visarga (H). Without these the "seed" consists only of the "trident" (A U). He should meditate in the Heart, with the form of the "seed" that which expands in the "stations," here understood as the finite energies or parts of the ascending and descending breath, prana and apana. This is the seed which goes into the midst, that is, it becomes
absorbed into the form of the vital breath, and, by means of the vital breath, becomes absorbed into the body.

The word 3di can be interpreted as the phonemes which comprise the class of vowels, that is, the vowels beginning with A (A+ adi). The word end refers to the visarga (H), as we have already seen in the verse that reads "The end of those, which are in union with time" [sloka 5]. According to this interpretation, the "seed," which is devoid of vowel or visarga, is none other than the phoneme S, unaccompanied by a vowel. This stands in the middle of the stations, the finite energies of the ascending and descending breath, which are thus "expanding." This is the seed that is to be meditated in the body, in the Heart.

He will now describe the fruit of such a practice.

[sloka 35:]

Whatever desires he may long for, he will quickly obtain them.
Immediately he is placed face to face with That, and obtains omniscience. Of that there is no doubt.

[sloka 36:]

Thus one obtains the fruit of the mantra, and therefore this is the union of Rudra (Rudra-yamala). Perfection (siddhi) comes as a result of it and the attainment of omniscience.

[commentary on 35-36:]

The various perfections have been described in the verse which reads [sloka 21] "Beginning with the kalagni." As for the word quickly, see the stanza that reads [sloka 12] "But he who remembers for a period of forty-eight minutes."

The phrase "placed face to face with That and obtains omniscience" has been explained when the attainment of an absorption with a duration of three periods of forty-eight minutes was described [sloka 15]. When the absorption into the Heart is maintained for four periods of forty-eight minutes, then the totality, whose nature is essentially light, attains the condition of day, and the contraction of night of maya is destroyed. Then the practitioner, with this very body, becomes omniscient like Bhairava.

The last verse, which begins "thus," summarizes everything. Since all the fruits of the mantra consisting in the higher and lower perfections are obtained due to the attainment of the ultimate seed (anuttara-bija), therefore, because of the fact that it bestows the fruits of the Rudra-pair,
it is called the *Rudra-yamala*, containing twelve and a half million verses. Siva and his *Sakti* are to be found there in a state of perpetual union.

Because of this, the fruit that may be obtained as a result of this practice is, in short, the attainment of the condition of Bhairava, which may be characterized as omniscience and omnipotence, he therefore states [in verse 36], "Because of this practice" and so on.

Even without this practice, the state of liberation in this life, the supreme *kaulika* perfection may be obtained. Thus Siva.

1. What is cut and shattered and well concealed by the language of the Tantra, that Ultimate (*qnuttara*) has been expounded here by Abhinavagupta,

2. Faithful to this discrimination, do not become vessels for error. You, my good disciples, obtain today the complete acquisition of the condition of Bhairava.

3. You, who are experienced in the absorption that swallows up the three worlds, may you know the joy of union and the completely full bliss of the Ultimate.

4. I extol that ultimate consciousness from which and in which the entire fullness of being is emitted by means of will, knowledge and action.

5. Whose power is always new, and the God, the great Lord, who is hidden by that power, I bow down to Siva, new and hidden, in the form of the divine pair.

This Examination of the Principle of the Ultimate known as the Short Gloss on the Supreme, the Queen of the Three has been concluded. It is the work of the venerable and renowned Abhinavagupta obtained by reflection on the lotus feet of the three-eyed Lord. This is Siva.

Kaulas: additional texts of, 58; basic method of, 60; enlightenment in, 60; as esoteric tradition, 14; as inner teaching, 201; lineage and Heart, 4; lineage, 55-63; literature of, 57-58; major concepts, 87-88; meaning of, 58-63; phoneme mysticism of, 62-63, 153, 172; portions of Abhinavagupta’s writings, 5-6; practices of, 149; role of sakti in, 50; secret of, 140; sexuality in, 52-54; summary of meanings, 200-201; suspicion of language, 15; traditional links to, 36

Kaulika, 105-6; function, 166; perfection, 90, 185, 189-90

Kaulika-vidhi, 106

Kaulika siddhi, 108

Kauli, 89

Kauliki-sakti, 60, 103, 104, 107; related to visarga, 134

Kauliki siddhi: identified with vimarsa, 108

Kaulini, 104, 105

Kaulini sakti, 145

Kaundinya, 32

Kaviraj, Gopinath, 21, 49

Kaya-sadhana, 36

Kaw, R. K., 21

Kha, 143-44

Khecari, 8, 52, 76, 142-46, 184

Khecari-mudra, 37-38, 123, 144, 190

KhPhREM, 179-80

Knowable objects, 128, 143

Knowledge: spiritual, 168; and initiation, 170

Krama lineage, 55

Kramrisch, Stella, 30

Kriya-sakti, 114, 115, 131, 146, 167, 178

Krsna, 73

Ksemaraja: disciple of Abhinavagupta, 6; alternation between inner and outer, 123; on bindu, 156; on

Hrdaya, 78, on madhya, 94; on mantra SAUH, 178-79; on ocean, 148-49; on prakasa-vimarsa, 95; various texts of: comment on Nettantra, 42; his Pratyabhijnahrdayam, 21; his Spanda-nirnaya to Spanda-karika-s, 21, 44; his Spanda-sandoha, 44; comment on Svacchanda-tantra, 42; partial comment on Vijnana-bhairava-tantra, 43; Vimarsini to Sivasutra-s, 21, 43

Ksobha, 93, 120

Kula, 8, 87, 165; Abhinavagupta on, 107-8; as body, 101, 110; as consciousness, 101; derivation of the term, 102; and Heart, 100-17; related to human situation, 110; becomes light, 188; and manifestation, 101; meaning of the term, 59-63; related forms, 59; equated with sakti, 101

Kula-cakra, 62

Kulanayika, 104

Kula-prakriya, 56

Kularnava-tantra, 57

Kula-yaga, 62, 174

Kulesitr, 109

Kulesvari, 109

Kundalini, 29, 34, 51, 53, 83, 114, 123, 126, 139, 156

Kundalini ou L’energie des profondeurs, La (Silburn), 21

Laksmanagupta, 44, 45

Lakulisa, 31, 56

Langer, Suzanne, 9

Language: used in mantras, 172

Larson, Gerald J., 11-12, 23

Liberation, 105, 121; experience of, 15; and mantra, 163-64; while still alive, 185

Life-in-freedom, 185, 194-95

Light: kula becomes, 188; as one, 97; primordial terms for, 95-96; pure unmanifested, 96
INDEX
